Protecting China's Interests Overseas provides a fascinating and new window into Chinese foreign and security policymaking. In particular, it shows how the management of non-traditional security issues abroad led to the emergence of China's strategy to defend its interests overseas. This book comes at a critical time, as China has just inaugurated its first overseas military base in Djibouti, thereby establishing a long-term military presence outside Asia. Based on a large number of Chinese primary sources, the book examines how the main actors involved in the making and implementation of Chinese foreign policy understood the problem of protecting the assets and lives of Chinese companies and nationals abroad, especially in North Africa and the Middle East, and interacted with each other depending on their priorities, preferences, and organizational interests. As the different chapters explore various aspects and dynamics within the Chinese foreign and security policy machine, the analysis concludes that the emergence of China's strategy to defend its interests overseas was, to a large extent, crisis-driven. The evacuation of 36,000 Chinese nationals from Libya in 2011 was a critical moment in this process. Henceforth, significant efforts were made to strengthen the capabilities of and coordination between the different agencies under the control of the Chinese leadership, especially the Chinese People's Liberation Army. Consistently, China's military presence abroad expanded and evolved over the years to stabilize the regions where the country's human and economic presence is most significant, and to neutralize the non-traditional security threats against it. However, Chinese policymakers still face important challenges and complex dilemmas on the path to formulate a sustainable policy towards this very difficult issue. Protecting China's Interests Overseas also offers an opportunity to rethink how we study and understand Chinese foreign policymaking. Information is a key resource for all enterprises. A particularly timely book, given the high proportion of international students and staff in higher education Public health was the immediate concern when the Covid-19 pandemic struck in Asia, then in Europe and other parts of the world. The response of our education systems is no less vital. Higher education has played a major role in

responding to the pandemic and it must help shape a better, more equitable and just post-Covid-19 world. This book explores the various responses of higher education to the pandemic across Europe and North America, with contributions also from Africa, Asia and South America. The contributors write from the perspective of higher education leaders with institutional responsibility, as well as from that of public authorities or specialists in specific aspects of higher education policy and practice. Some contributions analyse how specific higher education institutions reacted, while others reflect on the impact of Covid-19 on key issues such as internationalisation, finance, academic freedom and institutional autonomy, inclusion and equality and public responsibility. The book describes the various ways in which higher education is facing the Covid-19 pandemic. It is designed to help universities, specifically their staff and students as well as their partners, contribute to a more sustainable and democratic future. In-depth entry-level training material for electronics technicians planning to become Certified Electronics Technicians Following a decade of U.S. bombing campaigns that obliterated northern Vietnam, East Germany helped Vietnam rebuild in an act of socialist solidarity. In *Building Socialism* Christina Schwenkel examines the utopian visions of an expert group of Vietnamese and East German urban planners who sought to transform the devastated industrial town of Vinh into a model socialist city. Drawing on archival and ethnographic research in Vietnam and Germany with architects, engineers, construction workers, and tenants in Vinh's mass housing complex, Schwenkel explores the material and affective dimensions of urban possibility and the quick fall of Vinh's new built environment into unplanned obsolescence. She analyzes the tensions between aspirational infrastructure and postwar uncertainty to show how design models and practices that circulated between the socialist North and the decolonizing South underwent significant modification to accommodate alternative cultural logics and ideas about urban futurity. By documenting the building of Vietnam's first planned city and its aftermath of decay and repurposing, Schwenkel argues that underlying the ambivalent and often unpredictable responses to modernist architectural forms were anxieties about modernity and the future of socialism itself. ***Includes Practice Test Questions***

What they found when combined with findings in Colin's laboratory, opened their eyes to the dangers of a diet high in animal protein and the unparalleled health benefits of a whole foods, plant-based diet.
