Book Description

Getting started with data science doesn't have to be an uphill battle. *Applied Data Science with Python and Jupyter* is a step-by-step guide ideal for beginners who know a little Python and are looking for a quick, fast-paced introduction to these concepts. In this book, you'll learn every aspect of the standard data workflow process, including collecting, cleaning, investigating, visualizing, and modeling data. You'll start with the basics of Jupyter, which will be the backbone of the book. After familiarizing ourselves with its standard features, you'll look at an example of it in practice with our first analysis. In the next lesson, you dive right into predictive analytics, where multiple classification algorithms are implemented. Finally, the book ends by looking at data collection techniques. You'll see how web data can be acquired with scraping techniques and via APIs, and then briefly explore interactive visualizations. What you will learn

- Get up and running with the Jupyter ecosystem
- Identify potential areas of investigation and perform exploratory data analysis
- Plan a machine learning classification strategy and train classification models
- Use validation curves and dimensionality reduction to tune and enhance your models
- Scrape tabular data from web pages and transform it into Pandas DataFrames
- Create interactive, web-friendly visualizations to clearly communicate your findings

Who this book is for

Applied Data Science with Python and Jupyter is ideal for professionals with a variety of job descriptions across a large range of industries, given the rising popularity and accessibility of data science. You'll need some prior experience with Python, with any prior work with libraries such as Pandas, Matplotlib, and Pandas providing you a useful head start. Despite effective approaches to prevention, STD and

HIV infection rates remain fairly constant. Targeting, implementation, and monitoring of interventions have posed widespread problems, and the recent spate of cuts to prevention budgets has made these roadblocks even more challenging. It is clear that working in sexual health requires both a deeper understanding of STI/HIV epidemiology and an ongoing quest for up-to-date, realistic prevention strategies. The New Public Health and STD/HIV Prevention offers readers leading-edge access to both. Focusing on social determinants of sexual health, at-risk populations, critical factors in approaches to prevention, and reviews of new research, this authoritative volume explores areas as varied as HPV prevention, technology-based interventions, migration as a factor in disease transmission, and competencies key to effective leadership in the field. Dispatches from the frontlines of theory, research, and practice in the U.S. and abroad include: Personal risk, public impact: balancing individual rights and STD/HIV prevention. Distribution of prevention resources and its impact on sexual health. Prevention measures in diverse populations of women. Toward a better approach to preventive interventions with men who have sex with men. Adolescent sexual health and STIs. Reducing disparities in sexual health: lessons from the campaign to eliminate infectious syphilis. Public health professionals of all backgrounds interested in or working in improving sexual health will find The New Public Health and STD/HIV Prevention an indispensable guide to conceptualizing the problems and clarifying possible solutions. Critical Issues and Bold Visions for Science Education addresses diverse critical issues using rich theoretical frameworks and methodologies, and while retaining complexity, offers transformative visions within a context of political tensions, historical legacies, and grand challenges associated with Anthropocene. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and

technology are the driving forces that will help make it better. Before AIDS, the role of behavioral interventions in preventing transmission of sexually transmitted diseases was acknowledged in text books and journals but rarely promoted effectively in public health practice. This book addresses the complexities and social contexts of human behaviors which spread STDs, the cultural barriers to STD education, and the sociopolitical nuances surrounding treatment. The classic shotgun reference from one of the top experts in the field. In this near-legendary handbook, respected firearms expert Bob Brister offers advice, instructions, and solutions to every situation a shotgunner might face, making Shotgunning a guide from which both seasoned veterans and novice shooters will benefit. Based on years of tests, meticulous study of data, and a lifetime of insider expertise, this book will help any shooter make every shot count. A veritable encyclopedia of the shotgun for the modern shooter and outdoorsman, Shotgunning details the selection of guns, loads, and chokes; required leads (translated into “bird lengths” for easier shooting recognition); shot velocity and penetration; the effects of recoil on the shooter; wind and temperature effects on shotshells; and much more. Data analysis puts blithely held truths to the test. Myths are debunked, and

Brister's conclusions are supported with hundreds of photographs, lending Shotgunning an authority that many recent, worthwhile books on the subject cannot claim. Brister brightly and boldly presents his readers with the science of shotgunning, but he never forgets the art that makes shooting a sport.

Shotgunning is an elegant and educational mélange—a unique and invaluable guidebook that any shotgunner must own. The type of questions covered includes the methodological (the nature of observations, laws, theories, and explanations) to the ontological — whether or not these sciences can explain human nature in a way consistent with common-sense beliefs. This Handbook is a major, comprehensive look at the key ideas in the field, is guided by several principles. The first is that the philosophy of social science should be closely connected to, and informed by, developments in the sciences themselves. The second is that the volume should appeal to practicing social scientists as well as philosophers, with the contributors being both drawn from both ranks, and speaking to ongoing controversial issues in the field. Finally, the volume promotes connections across the social sciences, with greater

internal discussion and interaction across disciplinary boundaries. We study the spatially resolved properties of star-forming galaxies at redshift $z = 2 - 3$ on scales 1 kpc using a combination of morphological and kinematic analyses in an effort to characterize the major mechanisms of galaxy formation in the young universe. Using a sample of 216 galaxies which have been spectroscopically confirmed to lie between redshifts $z = 1.8 - 3.4$ in the GOODS-N field we demonstrate that rest-UV morphology (as seen by the Hubble Space Telescope) is statistically uncorrelated with physical properties such as star formation rate and is therefore unable to support the hypothesis that the prevalence of irregular morphologies indicates a high major merger fraction. Further, we present a sample of 13 galaxies observed with the OSIRIS integral field spectrograph and the Keck laser-guide star adaptive optics system which demonstrate the prevalence of high velocity dispersions 80 km/s and generally little in the way of spatially resolved velocity gradients, inconsistent with favored rotating disk models. We discuss the implications of these results for galaxy formation models, including gas accretion via cold flows and gravitational instability of early gas-rich galactic disks. There is some evidence for a trend towards stronger rotational signatures in galaxies with more massive stellar populations.

Money. The root of all evil? Arguably. Essential to our lives? Certainly. A main driver of human thought, emotion, and action? Absolutely--and psychology and its related fields are getting closer to understanding its complex role in human behavior and in society. The Psychological Science of Money brings together classic and current findings on the myriad ways money affects brain, mind, and behavior to satisfy not only our needs for material gain, but also for autonomy and self-worth. Leading experts trace the links between early concepts of value and modern symbolic meanings of wealth, in addition to identifying the areas of the human brain that together act as its financial center. This cross-disciplinary analysis helps clarify the

neuroscience behind pathological gambling, the critical role of time in financial decisions, and the impact of money on diverse personal activities and interpersonal relationships. Included in the coverage: Materiality, symbol, and complexity in the anthropology of money. The (relative and absolute) subjective value of money. Conscious and unconscious influences of money: two sides of the same coin? A life-course approach to dealing with monetary gains and losses Motivation and cognitive control: beyond monetary incentives. An integrative perspective on the science of getting paid. The psychological science of spending. The unique role of money in society makes *The Psychological Science of Money* a singularly fascinating resource with a wide audience among social psychologists, industrial and organizational psychologists, economists, sociologists, anthropologists, and public policymakers. This preliminary report presents initial findings from the second International Study of Science Achievement that was conducted by the International Association for the Evaluation of Educational Achievement (IEA) in the period 1983 to 1986. Achievement results for three school population levels are presented together with some special analysis on growth in achievement between population levels and on sex differences in science achievement. This volume contains the invited lectures, invited symposia, symposia, papers and posters presented at the 2nd European Cognitive Science Conference held in Greece in May 2007. The papers presented in this volume range from empirical psychological studies and computational models to philosophical arguments, meta-analyses and even to neuroscientific experimentation. The quality of the work shows that the Cognitive Science Society in Europe is an exciting and vibrant one. There are 210 contributions by cognitive scientists from 27 different countries, including USA, France, UK, Germany, Greece, Italy, Belgium, Japan, Spain, the Netherlands, and Australia. This book will be of interest to anyone concerned with current research in Cognitive Science. Like a pianist who

practices from a book of *Études*, readers of *Programming Projects in C for Students of Engineering, Science, and Mathematics* will learn by doing. Written as a tutorial on how to think about, organize, and implement programs in scientific computing, this book achieves its goal through an eclectic and wide-ranging collection of projects. Each project presents a problem and an algorithm for solving it. The reader is guided through implementing the algorithm in C and compiling and testing the results. It is not necessary to carry out the projects in sequential order. The projects contain suggested algorithms and partially completed programs for implementing them to enable the reader to exercise and develop skills in scientific computing; require only a working knowledge of undergraduate multivariable calculus, differential equations, and linear algebra; and are written in platform-independent standard C, and the Unix command-line is used to illustrate compilation and execution. The primary audience of this book is graduate students in mathematics, engineering, and the sciences. The book will also be of interest to advanced undergraduates and working professionals who wish to exercise and hone their skills in programming mathematical algorithms in C. A working knowledge of the C programming language is assumed. The book will focus on exploiting state of the art research in semantic web and web science. The rapidly evolving world-wide-web has led to revolutionary changes in the whole of society. The research and development of the semantic web covers a number of global standards of the web and cutting edge technologies, such as: linked data, social semantic web, semantic web search, smart data integration, semantic web mining and web scale computing. These proceedings are from the 6th Chinese Semantics Web Symposium. The 6th FTRA International Conference on Computer Science and its Applications (CSA-14) will be held in Guam, USA, Dec. 17 - 19, 2014. CSA-14 presents a comprehensive conference focused on the various aspects of advances in engineering

systems in computer science, and applications, including ubiquitous computing, U-Health care system, Big Data, UI/UX for human-centric computing, Computing Service, Bioinformatics and Bio-Inspired Computing and will show recent advances on various aspects of computing technology, Ubiquitous Computing Services and its application. The pharmaceutical industry relies on numerous well-designed experiments involving high-throughput techniques and in silico approaches to analyze potential drug targets. These in silico methods are often predictive, yielding faster and less expensive analyses than traditional in vivo or in vitro procedures. *In Silico Technologies in Drug Target Identification and Validation* addresses the challenge of testing a growing number of new potential targets and reviews currently available in silico approaches for identifying and validating these targets. The book emphasizes computational tools, public and commercial databases, mathematical methods, and software for interpreting complex experimental data. The book describes how these tools are used to visualize a target structure, identify binding sites, and predict behavior. World-renowned researchers cover many topics not typically found in most informatics books, including functional annotation, siRNA design, pathways, text mining, ontologies, systems biology, database management, data pipelining, and pharmacogenomics. Covering issues that range from prescreening target selection to genetic modeling and valuable data integration, *In Silico Technologies in Drug Target Identification and Validation* is a self-contained and practical guide to the various computational tools that can accelerate the identification and validation stages of drug target discovery and determine the biological functionality of potential targets more effectively. Daniel E. Levy, editor of the Drug Discovery Series, is the founder of DEL BioPharma, a consulting service for drug discovery programs. He also maintains a blog that explores organic chemistry. This book is written for members of the scholarly research community, and for

persons involved in research evaluation and research policy. More specifically, it is directed towards the following four main groups of readers: – All scientists and scholars who have been or will be subjected to a quantitative assessment of research performance using citation analysis. – Research policy makers and managers who wish to become conversant with the basic features of citation analysis, and about its potentialities and limitations. – Members of peer review committees and other evaluators, who consider the use of citation analysis as a tool in their assessments. – Practitioners and students in the field of quantitative science and technology studies, informetrics, and library and information science. Citation analysis involves the construction and application of a series of indicators of the ‘impact’, ‘influence’ or ‘quality’ of scholarly work, derived from citation data, i.e. data on references cited in footnotes or bibliographies of scholarly research publications. Such indicators are applied both in the study of scholarly communication and in the assessment of research performance. The term ‘scholarly’ comprises all domains of science and scholarship, including not only those fields that are normally denoted as science – the natural and life sciences, mathematical and technical sciences – but also social sciences and humanities.
