Supporting the Child and the Family in Paediatric Palliative Care Nov 12 2022 Supporting the Child and the Family in Paediatric Palliative Care provides a comprehensive overview of good practice in caring for terminally-ill children, young people and their families. Drawing from extensive personal experiences of working in paediatric palliative care, the author provides guidance on issues including symptom management and pain relief; cultural, religious and spiritual aspects of care; and the role of education for life-limited children. Addressing the importance of individual needs, the book looks at emotional, social and cognitive support at different stages of the illness, how parents and professionals can respond to children's own questions about death, and the impact of life-limiting illness on the whole family - including grandparents and siblings. The material offers helpful suggestions on how to support families in making informed choices during distressing periods, such as where their child will die and how to prepare for the funeral. This book is a practical and invaluable tool for nurses, paediatricians, hospice care staff, bereavement counsellors and all those caring for life-limited children.

America's Children Jul 08 2022 America's Children is a comprehensive, easy-to-read analysis of the relationship between health

insurance and access to care. The book addresses three broad questions: How is children's health care currently financed? Does insurance equal access to care? How should the nation address the health needs of this vulnerable population? America's Children explores the changing role of Medicaid under managed care; state-initiated and private sector children's insurance programs; specific effects of insurance status on the care children receive; and the impact of chronic medical conditions and special health care needs. It also examines the status of "safety net" health providers, including community health centers, children's hospitals, school-based health centers, and others and reviews the changing patterns of coverage and tax policy options to increase coverage of private-sector, employer-based health insurance. In response to growing public concerns about uninsured children, last year Congress voted to provide \$24 billion over five years for new state insurance initiatives. This volume will serve as a primer for concerned federal policymakers and regulators, state agency officials, health plan decisionmakers, health care providers, children's health advocates, and researchers.
Recent Advances in Paediatrics - 29 Mar 24 2021 Recent Advances in Paediatrics-29 features an outstanding collection of articles relevant to paediatricians and health professionals working with children and adolescents across the world. The book reflects the changing landscape in paediatrics, with significant emphasis on adolescent health, both physical and mental, and references the role of technology and innovations such as conversational artificial intelligence (AI) and ChatGPT in improving outcomes. Other topics include prenatal screening and diagnosis of genetic defects, advances in neonatal care, a systematic approach towards orthopaedic management of cerebral palsy, bone health and osteoporosis, as well as advances in surgery and urology. The text features chapters on "safer care for sick children" with the role of safety checklists and escalation of care using hub and spoke models covered in depth to encourage universal high standards of care. This book is a compelling read for medical students explaining aspects of paediatrics often not covered in conventional textbooks, and furthermore provides an effective revision tool for DCH and MRCPCH examinations. It will also be of interest to practising clinicians wishing to keep up to date with the latest advances in their field. All chapters are written by expert authors ensuring authoritative and accurate content, and full colour photographs supplement enhance the comprehensive text.
Nursing Care of Children and Young People with Long-Term Conditions Sep 10 2022 The second edition of Nursing Care of Children and Young People with Long Term Conditions remains the only nursing-specific text on the care of paediatric patients with chronic illness. Written to meet the needs of nursing students and professionals alike, this comprehensive

volume provides authoritative and up-to-date information on the context, theory, and practice of delivering holistic care to children and families in a range of health and social care settings. Contributions from a team of experienced academics, educators, and practitioners offer valuable insight into the impact of chronic illness on children and parents, the practical implications of meeting their physical, psychological, and social needs, empowering them to be 'experts' in their care, and many more vital aspects of long-term paediatric care. This edition features new and revised content reflecting contemporary guidelines and evidence-based practice, including updated clinical case studies and a new chapter examining the impact of having a sibling with a long-term condition. Emphasising a multi-disciplinary approach to managing chronic illness, this important resource: Provides numerous case studies and activities illustrating the application of theoretical principles and current evidence in nursing practice Investigates the genetic basis of chronic illness and the differing onsets of long-term conditions Discusses current political, economic, and social policies that are influencing healthcare for children and bringing challenges to managers and practitioners Examines both classic and contemporary theories of grief, loss, coping, and adaptation Explores ethical, legal, and professional aspects of nursing children and young people with chronic illness Addresses evolving nursing roles, the importance of acute emergency care, and the planning and delivery of effective transition from child to adult services Nursing Care of Children and Young People with Long Term Conditions is required reading for student and registered children's nurses, as well as for practitioners in related health and social care disciplines.

Children, Young People and Care Oct 19 2020 The very notions of childhood and youth are intimately connected to contemporary norms, practices and spaces of care, caring and care-giving. The provision of care is widely figured as both the primary responsibility of parents, carers and practitioners who work with children and young people, and the primary factor in shaping children and young people's development, education, socialisation, wellbeing and contentment. However, children and young people themselves are rarely figured as key actors in the provision of care. An overwhelming presumption that children and young people are to be cared for has effectively marginalised their agency and responsibilities as carers, or in relation to practices and spaces of care. Bringing together a significant array of multidisciplinary work on children, young people and families, this collection draws together new research on the diverse lives and experiences of children and young people as carers, as cared for, and in relation to spaces and institutions of care. It is the first collection specifically devoted to the subject of care in relation to childhood and youth. As such, the book will be a key resource for academics, practitioners and students seeking leading-edge empirical and conceptual material on this topic.

Paediatric Intensive Care May 18 2023 Paediatric Intensive Care gives practical and realistic advice for all those who care for critically ill children. Organised predominantly

by system or speciality for easy reference, it also comprehensively covers the underlying principles that guide clinicians in every day practice.

Paediatric Patient and Family-Centred Care: Ethical and Legal Issues Aug 29 2021 This book provides the reader with a theoretical and practical understanding of two health care delivery models: the patient/child centred care and family-centred care. Both are fundamental to caring for children in healthcare organizations. The authors address their application in a variety of paediatric healthcare contexts, as well as an understanding of legal and ethical issues they raise. Each model is increasingly pursued as a vehicle for guiding the delivery of health care in the best interests of children. Such models of health care delivery shape health care policies, programs, facility design, resource allocation decisions and day-to-day interactions among patients, families, physicians and other health care professionals. To maximize the health and ethical benefits these models offer, there must be shared understanding of what the models entail, as well as the ethical and legal synergies and tensions they can create. This book is a valuable resource for paediatricians, nurses, trainees, graduate students, practitioners of ethics and health policy.

Mental Health Care of Children and Adolescents Jan 22 2021 "This indispensable resource provides vital guidance for integrating mental health care into your primary care practice. Learn from leading experts the latest information on enhancements to the medical home and on the care of children and adolescents with mental health symptoms that do not rise to the threshold for a diagnosis, as well as those that do"--Publisher's description. **Child Public Health** Dec 01 2021 This text focuses on a public health approach to the health and sickness of children and young people - comprising about a quarter of the population. It explores the state of health of our children, the historical roots of the specialty and the relation between early health and later adult health.

Children and Their Families Feb 15 2023 Children and Their Families: The Continuum of Care provides a unique interdisciplinary perspective that underscores the nurse's role in planning, coordinating, and working with all members of a pediatric health care team. It shows students how to make critical judgments and assessments to manage the care of children in a variety of community settings, including homes, schools, and medical centers. From infancy through adolescence, this text thoroughly covers the health promotion, surveillance, and maintenance needs of children. In this edition, threaded case studies follow a community of pediatric clients and continue throughout the chapter to show the interrelated dynamics of pediatric nursing care. A companion Website includes journal articles, NCLEX®-style chapter review questions, a Spanish-English audio glossary, Watch and Learn videos, a fluids and electrolytes tutorial, and much more.

Pediatric Nursing, Seventh Edition presents a foundation of core pediatric nursing principles with an emphasis on growth and development, family-centered care, and health promotion and maintenance. Nursing students often bring an Adult Health mindset to Pediatric Nursing, which can obscure the special considerations needed to effectively care for children. Principles of Pediatric Nursing helps students visualize how to care for children and understand the ways caring for pediatric patients is similar to, and different from, adult patients. Also available with MyNursingLab MyNursingLab is an online self-study and class preparation program designed to engage students and improve results. Its personalized learning path helps students think like nurses as they move beyond memorization to true understanding through application.

Care Planning in Children and Young People's Nursing Aug 09 2022 Care Planning in Children and Young People's Nursing addresses a selection of the most common concerns that arise when planning care for infants, children and young people within the hospital and community setting. Clear and detailed, this text reflects both the uniqueness and diversity of contemporary children's nursing and utilizes images and case studies to provide a holistic insight into the practice of care planning through the reporting of best available evidence and current research, policy and education. Divided into sections for ease of reference, Care Planning in Children and Young People's Nursing explores both the theory and practice of care planning. Chapters on the principles of care planning include issues such as managing risk, safeguarding children, ethical and legal implications, integrated care pathways, interprofessional assessment, and invaluable parent perspectives. Additional chapters on the application of planning care examine the practical aspects of a wide range of specific conditions including cystic fibrosis, obesity, cardiac/renal failure and HIV/AIDS. Each chapter is interactive, with questions, learning activities and points for discussion creating an engaging and enquiry-based learning approach. Care Planning in Children and Young People's Nursing is a definitive resource, reflecting innovative practice which is suitable for undergraduate and postgraduate nurse education.

Technology-dependent Children Apr 12 2020

Evidence-based Child Health Care Oct 11 2022 An 'evidence-based' approach to health care is growing in importance, but it is difficult for students and professionals to keep up-to-

date with a vast and changing knowledge base. Even more challenging is the need to apply the evidence to everyday nursing practice. This book helps the reader to do just that. Bringing together a range of contributors, it explores some of the latest research in children's nursing. A particular feature is the application of the findings presented to nursing practice.

Quality in Child Care Nov 19 2020

Pocket Book of Hospital Care for Children Jul 20 2023 This pocket book contains up-to-date clinical guidelines, based on available published evidence by subject experts, for both inpatient and outpatient care in small hospitals where basic laboratory facilities and essential drugs and inexpensive medicines are available. It is for use by doctors, senior nurses and other senior health workers who are responsible for the care of young children at the first referral level in developing countries. In some settings, these guidelines can be used in the larger health centres where a small number of sick children can be admitted for inpatient care.

Early Child Care Jul 28 2021

Early Child Care is about the very young child--infant, toddler, and early preschool--in today's world. It grew out of a series of conferences sponsored by the National Institute of Mental Health, the Children's Hospital of Washington, D.C., and the Committee on Day Care of the Maternal and Child Health Section of the American Public Health Association. Each of the sponsoring agencies represents a focal point for pressures from groups concerned with improving the care of the young child. Faced with common concern, the three sponsoring agencies brought together a number of experts in the field to pool information and experience and to review research findings as a basis for sound planning for children less than three years of age. The authors included in Early Child Care are pioneers in the true sense of the word.. Until recently, no one has tried to specify exactly what goes on between mother and her baby, who does what to whom in the exchange, and what happens if, instead of one mother, there is no mother, an alternating day and night mother, or many different substitutes for the mother. Until all that transpires between the mother and her baby in the best of circumstances is comprehended in sufficient detail that it can be confidently reproduced, it is impossible to make alternative plans. Early Child Care is an effort to identify what is known about young children and apply it to day-by-day programming. Millions of mothers give their babies a good start, providing devoted and painstaking care. Such mothers somehow know when a child needs to be let alone--and when to respond. This volume attempts to define how such instincts can be reproduced in other settings. Caroline A. Chandler was a consultant in child mental health and early child care at the Center for Studies of Child and Family Mental Health, National Institute of Mental Health in Maryland. Reginald S. Lourie was director of the department of psychiatry at the Children's Hospital, Washington D. C. and the founder of The Reginald S. Lourie Center for Infants and Young Children in Maryland. Ann DeHuff Peters was associate professor of maternal and child health at the School of Public Health, University of North Carolina. Laura L. Caring for Our Children Mar 16 2023

Paediatrics Aug 17 2020 In times of rapid change experience is no longer a sufficient guide to practice. Taking the principles of evidence-based medicine this is the first guide to evidence-based management. It will help managers and clinicians to make a difference to their organisation. Illustrated with case studies designed for 'the reader in a hurry' the clear layout of this practical guide is based on a questioning approach of Why? When? Where? How? and Who? which demonstrates how to apply the best evidence in decision making and in assessing performance. Obstacles to practising evidence-based management in healthcare are described with explanations of how to overcome them. Health managers and clinicians with managerial responsibilities will find this book an essential guide. Leaders in health service organisations public health doctors and public sector managers will find it of great benefit in their work.

Health for all Children Jan 14 2023 The foundations of health and wellbeing are laid down in pregnancy and the early years. Health for all Children takes a life course approach to child health, starting in pregnancy and extending to the age of seven to include transition into school, and to cover the foundation years in education. This new edition summarizes the evidence supporting preventive health care and health promotion; providing an effective, community-based response to the needs of families and children. Each chapter summarizes evidence of effectiveness in the topic area, in health promotion, and in universal and selective interventions. The fifth edition starts in pregnancy and runs until age seven taking into account Government policies and different models of delivery of the child health programme. Evidence from all over the world is critically appraised and referenced to UK policy and practice. Health for all Children summarizes the evidence about 'why' and 'what works' in health promotion and health surveillance with children and families, providing guidance on how to implement and quality assure a programme, and the competencies needed. Each chapter includes 'learning links' to online training materials and e-learning for health, or to resources freely available to practitioners. This established, evidence-based book continues to be essential reading for all health professionals who work with children. It will also provide vital background knowledge for those charged with the responsibility of planning, commissioning, and monitoring child health.

Innovations in Paediatric Ambulatory Care Sep 17 2020 Ambulatory care, the provision of health services on a day service basis, is a growth area. Nowhere is this more evident than in paediatrics where minimising the disruption to the lives of children caused by illness and hospitalisation has been high on the agenda for consumer groups and service providers for two decades. This book brings together details of some innovations in paediatric ambulatory

care, presenting them in a form that is readable, research-based and relevant to practice.
