Accounting and Financial System Reform in Eastern Europe and Asia Dec 03 2021 Much has been written about the economic and political problems of countries that are in the process of changing from centrally planned systems to market systems. Most studies have focused on the economic, legal, political and sociological problems these economies have had to face during the transition period. However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. This book was written to help fill that gap. This book is the second in a series to examine accounting and financial system reform in transition economies. The first book used Russia as a case study. The present volume in the series examines some additional aspects of the reform in Russia and also looks at the accounting and financial system reform efforts that are being made in Ukraine, Bosnia & Herzegovina, Armenia and five Central Asian republics.

Systems and Decision Making Sep 19 2020 Systems and Decision Making A Management Science Approach Hans G Daellenbach University of Canterbury, Christchurch, New Zealand Traditional methods of problem solving, based on the cause-and-effect model, can no longer cope with the complex situations in which decisions have to be made today. These problem situations occur within a systems context. Most of these systems are created and controlled by humans and it is, therefore, important that decision making is guided by a systematic and comprehensive methodology that helps the decision maker to make effective use of his/her extensive but limited powers of reasoning. Systems and Decision Making combines contemporary systems work with Operations Research (OR). Daellenbach places an emphasis on developing a methodology for decision situations that lend themselves to quantitative approaches rather than give an elementary survey of many OR/MS techniques. It incorporates some of the learnings of soft systems methodology for more practical problem solving, particularly at the problem identification and formulation stages. The text also shows that the scientific component of modelling can be considerably enhanced by the use of various diagrammatic devices. The second part of the book studies a number of topics important for the analyst, such as how to deal with the time element, with constraints, with uncertainty, and with multiple goals. These are demonstrated by various OR/MS techniques. Systems and Decision Making is an excellent core text for undergraduate and graduate students of systems, management science and MBA courses.

Housing Decisions for the Elderly Aug 31 2021 Because many elderly wish to age in place, they typically give little thought to the future of their housing options. Housing Decisions for the Elderly articulates the relevant issues regarding the diversity and complexity of housing decisions in terms of moving or not moving. To move or not to move is really part of the aging-in-place debate. In this guidebook, the authors deal with such issues as changes in economic income and stances; changes in household composition and health; and the psychosocial and metaphysical significance of "house." This treatment of housing decisions regarding aging in place serves to assist professionals and laypersons to help the elderly make more informed choices and to plan better for the future. Housing Decisions for the Elderly reminds those who work with elderly persons--community organization workers; housing counselors and specialists; home health care agencies; and gerontologists--that the proportion of persons living in family settings decreases with age, so that the older the person, the more likely he or she will be living above or with nonrelatives in institutional or quasi-institutional settings. While changes in household composition typically occur at one or more points in the aging process such as death of spouse, incapacitating illness or loss of income, other housing issues to consider are addressed: why socioeconomic determinants of housing decisions of elderly homeowners focuses primarily on housing characteristics (owning vs. renting), length of housing tenure, age, and support from relatives how elderly housing assistance programs affect housing tenure deals with age as the single most important factor factors that influence pre-retiree's propensity to move at retirement access to health care, freedom from house maintenance, and supportive services as the main determinants of moving to a continuing care retirement community

Imperfect Duties of Management Mar 18 2023 This book uses Kant's idea of imperfect duty to extend the theory of the firm. Unlike perfect duty which is contractual or otherwise legally binding, imperfect duty consists of those commitments of choice that pursue some moral value, but that have practical limits to their pursuit. The author presents a broad view of the imperfect duties of management, defined as a nexus of all commitments to do good involving relations internal and external to the firm. This nexus consists of three overlapping categories of (i) building a virtuous managerial community, (ii) pursuing reasoned managerial discourse, and (iii) diligent and reasoned pursuit of the body of routine managerial duties such as capital budgeting and internal controls. Specific applications of the nexus theory for stakeholder relations via fair negotiation, and for analysis of the effects on the managerial team of perquisite consumption are presented. This book has major implications for research in business ethics and allows critical insights into managerial decision making.
