The magazine that helps career moms balance their personal and professional lives. Edited by a team of experienced and internationally renowned contributors, the updated Third Edition is the standard reference for cosmetic chemists and dermatologists seeking the latest innovations and technology for the formulation, design, testing, use, and production of cosmetic products for skin, hair, and nails. New features in the Third Edition Cosmeceuticals and Active Cosmetics discusses the science of nearly two dozen cosmeceuticals used today. This third edition provides ample evidence on specific cosmeceutical substances, their classes of use, skin conditions for which they are used, and points of interest arising from other considerations, such as toxicology and manufacturing. The book discusses both cosmetic and therapeutic uses of cosmeceuticals for various conditions including rosacea, dry skin, alopecia, eczema, seborrheic dermatitis, purpura, and vitiligo. Active ingredients in the following products are discussed: caffeine, curcumin, green tea, Rhodiola rosea, milk thistle, and more. Also covered are topical peptides and proteins, amino acids and derivatives, antioxidants, vitamins E and C, niacinamide, botanical extracts, and biomarine actives. Providing ample scientific references, this book is an excellent guide to understanding the science behind the use of cosmeceuticals to treat a variety of dermatological conditions. Dr. Christiane Northrup's #1 New York Times bestseller *The Wisdom of Menopause* has inspired more than a million women with a dramatically new vision of midlife—and will continue to do so for generations to come. As Dr. Northrup has championed, the "change" is not simply a collection of physical symptoms to be "fixed," but a mind-body revolution that brings the greatest opportunity for growth since adolescence. The choices a woman makes now—from the quality of her relationships to the quality of her diet—have the power to secure vibrant health and well-being for the rest of her life. Now completely revised, this groundbreaking classic draws on the current research and medical advances in women's health, and includes: • a new section on sex after 50—and how, if need be, you can rejuvenate your sex life; • updated mammogram guidelines—and how thermography improves breast health; • the latest on the glycemic index, optimal blood sugar levels, and ways to prevent diabetes; • dietary guidelines

revealing that hidden sugar—not dietary fat—is the main culprit in heart disease, cancer, and obesity; • all you need to know about perimenopause and why it’s critical to your well-being; • a vital program for ensuring pelvic health during and after menopause; • strategies to combat osteoporosis and strengthen bones for life. With this trusted resource, Dr. Christiane Northrup shows that women can make menopause a time of personal empowerment—emerging wiser, healthier, and stronger in both mind and body than ever before. This book provides the dermatologist with the essential information needed to properly treat all skin types cosmetically. All chapters have been written by female dermatologists with many years of personal experience in the field. The volume includes an overview of the systemic, intrinsic and extrinsic aging process, essential information on anti-aging skin care product ingredients, detailed discussions of patient selection and indications, and a wide range of cosmetic procedures. This concise book allows you - through its well-organized use of sidebars, photographs and illustrations - to extract any information you may need quickly and easily. Describing the emerging and unresolved issues related to the oceans and the marine environment, this book presents the developments made in marine science and policy since the implementation of the United Nations Convention on the Law of the Sea (UNCLOS), and implications for the sustainable management of ocean areas and resources. This comprehensive volume also provides a number of scientific, policy, and legal tools to address such issues, and to ensure better science-based management of the oceans. Topics covered include the impacts of human-induced climate change on the oceans, the marine genetic resources debate, the current legal framework for the oceans, and a comparative study of the legal issues associated with outer space. Including practical examples and worldwide case studies, this book is a valuable resource for policy makers, students and academics, in marine science and policy, ocean affairs, and the law of the sea.

Break free and lead the market with the roadmap to Disruption *The Ways to New* gives you a blueprint for innovation, helping you dig your organization out of the quicksand and get on the fast track to growth. Author Jean-Marie Dru is the originator of the Disruption methodology, which he shares here; he is also an international authority on breaking the mold and leading the market, and this book is his guide to making it happen. Too many companies are too slow with innovation. They lag behind, creating at a snail's pace, and thus miss out on any kind of organic growth. They approach new ideas too conservatively, and focus innovation on products only—when there is a whole world out there waiting to be disrupted. This book shows you how to steer your organization toward continued innovation, creation, growth, and success, with 15 proven paths to disruption. Each is illustrated with case studies from companies like L'oreal, Procter & Gamble, and Salesforce.com, to show you the glaring differences between disruption and stagnation. We like to think that we live in a world where innovation happens at a staggering pace. The reality is that we don't, but that leaves an opening that your organization can fill if you're willing to break from the herd. This book shows you how start turning in a new direction, toward sustained, forward-thinking growth.

Foster organic growth within your organization Become more proactive about innovation Understand the famous "Disruption" methodology Learn the specific, proven paths to disruption Everyone loves to cite Apple, Google, and Amazon as proof of high-speed innovation. But companies like this represent only 20% of companies worldwide—the other 80% are still floundering and failing to move forward. *The Ways to New* gives you a roadmap to innovation, and the tools to make it work. Beekeepers understand the importance of a fertile nurturing ground and cross pollination. Likewise, author Peter Gloor teaches readers that those who want to gain a business advantage shouldn't spend their time chasing ideas, but instead should nurture the cool ideas all around them to foster exciting new trends. In *Coolfarming*, he reveals the proven, four-step process for farming cool new ideas and unleashing a swarm of creative output.

Featuring real-life examples from companies like Linux, Twilight, Procter & Gamble, and Apple, this invaluable and insightful book explains: how to provide a fertile nurturing ground for developing original ideas; how to determine what “cool” means for one's target group; what makes something worthy of being the next big thing; how to turn creative dreams into real products by enlisting the help of a dedicated and passionate Collaborative Innovation Network (CIN); and how to carry new ideas over the tipping point and turn them into widespread phenomena. Those who want to stay ahead of the curve and ride a wave of profit need to learn how to find, develop, and popularize the trends of tomorrow. Coolfarming moves individuals and organizations to crosspollinate creative ideas and resources that yield highly sought-after results. Do you really need a ten-step skincare regimen? Is that \$100 eye cream worth it? And what the heck are “actives” anyway? In this book two professional chemists and beauty industry insiders tell all. Depending on who you listen to, the secret to beautiful skin is microbiomes. Or Korean rice water. Or maybe a dermaplaning tool. It feels like you need a degree in chemistry to even understand what these products are, and if they live up to the hype. Luckily, Victoria Fu and Gloria Lu, professional skincare chemists have done that work so you don't have to. The science may seem complicated, but this book will show you how simple it can be, giving you what you need to make informed decisions about your skin (and your wallet). Skincare Actives? Technically, cat sneezes could count. SPF? Yep, super important. Caffeine serums? The science is still out. CBD additives? Not enough studies yet, so the jury's still out. The authors are the creators behind the popular Chemist Confessions Instagram, and this book brings the sass, humor, and solid information they're known for. Additional chapters address the best ingredients for every skin type, and reveal the only four products you really need. This unique, reader-friendly compendium on all aspects of non-invasive facial rejuvenation shows the current approach to the issue. Novices as well as experts will benefit from the wealth of experience and expert practical information of the authors. In this compilation, you will find the same expert authors who contribute to *Cosmetics & Toiletries* magazine. Chapters include: ingredients, intervention, testing, claim substantiation and physiology. Topics covered run the gamut, such as: naturals, new methodologies, skin lighteners, novel ingredients and age-effect inhibitors. For those who are interested in formulating either mass-market products or prestige lines, this book is beneficial in keeping one step ahead of the game. Authors include Suellen Bennett; Ratan K. Chaudhuri; Brigitte Closs; Zoe Diana Draelos, Alain Loiseau, MD; Howard I. Maibach, MD; P. Morganti; Lakshmi Prakash; Martin Rieger and Alain Thibodeau. This textbook takes an all-encompassing approach to the topics of drug research and development, manufacturing, methodologies and technology, pharmaceutical regulation, and pharmaceutical marketing. This book covers the essential chemistry to show how a drug was taken from the laboratory to the mass market. Beginning with the discovery of the medicine's active medicinal components and continuing through its manufacture in a variety of dosage forms, this book shows how a drug went from the lab to the market. The study of medicines covers the whole process of creating pharmaceuticals, from the initial discovery to the point when they are sold commercially. Those who work in the pharmaceutical industry wear a variety of hats, and some of those hats need them to use certain kinds of equipment, carry out specific kinds of research, and comply with specific kinds of legislation. The most common dosage forms, including tablets, capsules, parenteral solutions, suspensions, and emulsions, have all been discussed here in detail. Tablets and capsules are also included. Products that have a regulated release, methods of oral protein administration, and other topics of a similar kind are also explored. The book delves into topics such as the prospects for the pharmaceutical industry in the next years as well as issues such as quality control, safety, counterfeiting, and improper medication usage. This book serves as

essential reading for research scientists and biotechnologists from both academia and industry working in marine biotechnology and related disciplines. The book discusses recent advances and challenges in terms of science, technology, innovation, and policy for the development of the field; and how marine biotechnology may provide new solutions to some of the grand challenges faced by our society. Written in an accessible language, the book is also recommended as a reference text for decision-makers in government and non-governmental organizations in their efforts to foster the development of a global blue economy. With less than 5 % of the vast and rich marine environment explored, our seas and oceans represent a virtually unexplored resource for the discovery of novel product, processes, and development of bio-inspired synthetic drugs with biotechnological potential. As such, the marine environment has been considered Earth's last frontier of exploration. Recent advances in molecular techniques are providing the necessary tools to access on a larger scale the still-untapped ocean resources and, consequently, unveil the promise of the blue biotechnology. Governments are recognizing the potential of marine biotechnology to provide solutions to some of the Grand Challenges of the 21st Century such as sustainable energy and food sources, identification of novel drugs for improved health treatments, and providing new industrial materials and processes. For this reason, advances in marine biotechnology may foster the much-needed source of innovation and economic growth in many countries, and pave the way towards the development of a global blue economy, i.e. a new economic model based on the sustainable exploration of our ocean ecosystems. *Marine Cosmeceuticals: Trends and Prospects* is a consolidated overview of the marine environment as a productive source of novel cosmeceuticals. It accumulates the latest research in this field from around the globe, highlighting the potential of marine micro and macro flora and fauna as effective agents for the development of novel cosmeceuticals. Part I overviews the biological activities of different marine sources and the class of cosmeceutical agents that they may deliver Part II describes the chemical properties of marine cosmeceuticals, with special emphasis on chitosan as a cosmeceutical agent Part III covers the range of biological properties and bioactive promise that the oceanic environment holds in the field of cosmetology, with a focus on marine fish and sponge derived collagens Part IV presents different strategies for enhanced cosmeceutical production via biotechnology Part V wraps up with the industrial applications of marine cosmeceuticals, including information on aquatic and marine bioactive antimicrobial peptides With contributions from Korea, Japan, China, India, Spain, Chile, Malaysia, Canada, Italy, Sri Lanka, and Taiwan, *Marine Cosmeceuticals: Trends and Prospects* holds great insights for cosmetologists in particular and marine researchers in general. This book offers comprehensive knowledge on novel marine cosmeceutical agents, their biological and chemical properties, and industrial applications. Home to over 80 percent of all life on Earth, the ocean is the world's largest carbon sink and a key source of food and economic security for billions of people. The relevance of the ocean for humanity's future is undisputed. However, the ocean's great potential to drive economic growth and equitable job creation, sustain healthy ecosystems, and mitigate climate change is not yet fully recognised. Lack of awareness of this potential as well as management and governance challenges pose impediments. Until these impediments are removed, ocean ecosystems will continue to be degraded and opportunities for people lost. A transition and a clear path to a thriving and vibrant relationship between humans and the ocean are urgently needed. This open access collection of papers and reports identifies a path that is inspired by science, energised by engaged people, and emboldened by visionary leaders. These assessments of knowledge are commissioned by the High Level Panel for a Sustainable Ocean Economy (Ocean Panel), which was established in September 2018 as a unique initiative led by heads of state and government from around the world, to showcase the latest leading-edge

science, knowledge and state-of-the-art thinking on key ocean issues. Altogether, The Blue Compendium offers innovative ocean solutions in technology, policy, governance, and finance realms, that could help accelerate a transition to a more sustainable and prosperous relationship with the ocean. The comprehensive assessments have already informed policy making at the highest levels of government and motivated an impressive array of responsive and ambitious action across a growing network of leaders in business, finance and civil society.
