Advanced Pre-Med Studies Parent Lesson Plan May 28 2021 Advanced Pre-Med Studies Course Description
Semester 1: From surgery to vaccines, man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone, and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. In *Exploring the History of Medicine*, author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God. The fascinating history of medicine comes alive in this book, providing students with a healthy dose of facts, mini-biographies, and vintage illustrations. It seems that a new and more terrible disease is touted on the news almost daily. The spread of these scary diseases from bird flu to SARS to AIDS is a cause for concern and leads to questions such as: Where did all these germs come from, and how do they fit into a biblical world view? What kind of function did these microbes have before the Fall? Does antibiotic resistance in bacteria prove evolution? How can something so small

have such a huge, deadly impact on the world around us? Professor Alan Gillen sheds light on these and many other questions in *The Genesis of Germs*. He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view. Dr. Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ. *Semester 2: Body by Design* defines the basic anatomy and physiology in each of 11 body systems from a creationist viewpoint. Every chapter explores the wonder, beauty, and creation of the human body, giving evidence for creation, while exposing faulty evolutionist reasoning. Special explorations into each body system look closely at disease aspects, current events, and discoveries, while profiling the classic and contemporary scientists and physicians who have made remarkable breakthroughs in studies of the different areas of the human body. Within *Building Blocks in Life Science* you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic education resource helps young people not only learn science from a biblical perspective,

but also helps them know how to defend their faith in the process.

Spanish Lesson Plans for Kids Oct 01 2021 Spanish Lesson Plans for Kids is an activity- and content-based curriculum that immerses young learners in the Spanish language. Developed by professional educators with over forty years of combined teaching experience, this 40-lesson scaffolded curriculum engages learners in stimulating, language-infused activities that are fun and age-appropriate, including content-rich instruction in math, science, art, and physical education. Beginning with Lesson 1 Who am I?, the lessons follow a logical progression of thematic units (Colors, Numbers, Shapes, Places, Around the House, Clothing, Seasons, Parts of the Body, Positional Words, Food, Family, Animals, and Descriptive Words), culminating in an activity that combines games, food, music, and crafts. The lessons identify clear goals and learning objectives and include play-based assessments of learners' developing proficiency. Extension activities offer students additional learning opportunities and cultural experiences as they dance and sing to music from across the Spanish-speaking world. Informed by language acquisition theory, Spanish Lesson Plans for Kids emphasizes the development of student proficiency in speaking and listening through the use of the target language in real world contexts. An adventure in learning for teachers and students!

Intro to Speleology & Paleontology Parent Lesson Plan

Jun 28 2021 Introduction to Speleology and Paleontology

Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Speleology Explore deep into the hidden wonders beneath the surface as cave expert Dr. Emil Silvestru takes you on an illuminating and educational journey through the mysterious world of caves. Discover the beautiful, thriving ecology, unique animals, and fragile balance of this little-seen ecosystem in caves from around the globe. The Cave Book will teach you about: a creationary model for how caves form, a history of how caves have been used by humans for shelter and worship, how old caves really are, the surprising world of Neanderthals and their connection to modern humans, how to make a stone axe and about early tools, just how long it really takes for cave formations to form, unusual animals that make caves their home, examples of how connected caves are to mythology of many cultures, the climate and geologic processes and features of caves and karst rocks, the process by which ice caves form, exploration, hazards, and record-setting caves, how caves form, and features above and below the surface. Filled with beautiful and

fascinating color photos of caves from around the world. The Cave Book is a wonderful guide to this hidden world of wonder. Enjoy learning on your journey of exploration into these exciting and mysterious places underground!

Semester 2: Paleontology Fossils have fascinated humans for centuries. From the smallest diatoms to the largest dinosaurs, finding a fossil is an exciting and rewarding experience. But where did they come from, and how long have they been around? These and many other questions are answered in this remarkable book. The Fossil Book will teach you about: the origin of fossils, how to start your own fossil collection, what kinds of fossils can be commonly found, the age of fossils, how scientists find and preserve fossils, how to identify kinds of fossils, how the Flood affected fossil formation, the Geologic Column Diagram, the difference between evolutionists' and creationists' views on fossils, the "four Cs" of biblical creation, the different kinds of rocks fossils are found in, coal and oil formation. Learning about fossils, their origins, and how to collect them can be both fun and educational. The abundance of both marine and land fossils and the locations they are found in is a fascinating subject for students of all ages and has been studied by scientists and layperson alike for many years.

Quarter 1: Archaeology The Archaeology Book takes you on an exciting exploration of history and ancient cultures. You will learn both the techniques of the archaeologist and the accounts of some of the richest discoveries of the Middle East that demonstrate the accuracy and historicity of the Bible. You will unearth: how archaeologists know what life was like in the past, why broken pottery can tell more than gold or treasure can, some of the difficulties in dating ancient artifacts, how the brilliance of ancient cultures demonstrates God's creation, history of ancient cultures, including the Hittites, Babylonians, and Egyptians, the early development of the alphabet and its impact on discovery, the numerous archaeological finds that confirm biblical history.

Quarter 2: Geology The Geology Book will teach: what really carved the Grand Canyon, how thick the Earth's crust is, why the Earth is unique for life, the varied features of the Earth's surface—from plains to peaks, how sedimentary deposition occurs through water, wind, and ice, effects of erosion, ways in which sediments become sedimentary rock, fossilization and the age of the dinosaurs, the powerful effects of volcanic activity, continental drift theory, radioisotope and carbon dating, geologic processes of the past. Our planet is a most suitable home. Its practical benefits are also enhanced by the sheer beauty of rolling hills, solitary plains, churning seas and rivers, and majestic mountains—all set in place by

processes that are relevant to today ' s entire population of this spinning rock we call home. Quarter 3: Cave Explore deep into the hidden wonders beneath the surface as cave expert Dr. Emil Silvestru takes you on an illuminating and educational journey through the mysterious world of caves. Discover the beautiful, thriving ecology, unique animals, and fragile balance of this little-seen ecosystem in caves from around the globe. Lesson Planning Tweaks for Teachers Aug 31 2021

Lesson planning is a requirement of every teacher. Whether you are planning your day-to-day lessons or a formal observation, planning is a skill that can be refined and improved to ensure your workload is manageable and your lessons exceptional. Aimed at committed and reflective teachers who want to develop their practice, this book introduces Tweaks for Teachers: small changes that make a big difference! It encourages you to review your current lesson planning practice and develop lessons that enable students to make outstanding learning gains. The book focuses on making practical, small changes that, over time, can make a real difference to the quality of learning and teaching in the classroom. Organised around real lesson snippets and full lesson plans covering every secondary subject, the book focuses on the key areas you need to plan for every lesson: assessment for learning, questioning, stretch and challenge and commitment to learning, as well as covering the importance of developing a good marking practice. Real examples of successful lessons are provided as well as a commentary of missed opportunities and practical 'tweaks' that could be made to improve students' learning and to develop outstanding teaching. This format means that the book is not only

useful to those teachers wanting to develop their practice, but it is also a really useful training tool for those with responsibility for training new teachers or devolving a school's CPD provision. Lesson Planning Tweaks for Teachers takes a highly original approach to improving your lesson planning. Mel and Debbie's down to earth and accessible style will help every secondary teacher, whatever your level of experience, to make the planning process more meaningful and manageable, and one that leads to outstanding progress over time. Concepts of Mathematics & Physics Parent Lesson Plan Sep 19 2020 Concepts of Mathematics and Physics Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the

needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Mathematics Numbers surround us. Just try to make it through a day without using any. It ' s impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It ' s amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Semester 2: Physics Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia firsthand during fun and informative experiments. Exploring the World of Physics is a great tool for students who want to have a deeper understanding of the important and interesting ways that physics affects our lives.

Concepts of Medicine & Biology Parent Lesson Plan Mar 26 2021 Concepts of Medicine and Biology Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Medicine From surgery to vaccines, man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone, and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. In Exploring the History of Medicine, author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God. The fascinating history of medicine comes alive in this book, providing students with a healthy dose of facts, mini-biographies, and vintage illustrations. Semester 2: Biology The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God ' s amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the

stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990 ' s, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals.
