Transport of Nutrients in Plants provides the study of nutrient movement in plants. The greater part of this book deals with the physiology and cytology of phloem. The first chapter of

the text deals with studies on the definition of the cellular pathways of transport. Chapter 2 considers how the mobility of solutes can be measured and the range of chemical species which are moved in xylem and phloem. The next chapter discusses the concepts of velocity and rate. The rest of the book is devoted to the characteristics of phloem transport and the ultrastructure of sieve elements, including such topics as the control of movement, solute-loading and -unloading mechanisms, the dependence of transport upon metabolic energy, bidirectional

movement and water movement in phloem. Finally an account is given of the movement of endogenous growth regulators and a brief assessment of 'hormone-directed' transport. Botanists will find the book very interesting and informative. With 1 page corrigendum In a similar treatment to their previous books about science and literature, the authors consider over 25 picture books (both new and classic, but all new to this volume) that provide examples in nature (topics include living things, earth and stars, and natural changes) for children to observe, describe, and appreciate. Summaries of each

book are included as are extensive vocabulary lists, science concepts, puzzles, and integrated activities in math, language arts, writing, social studies, science, and art. The book also offers integrated activities in the area of information literacy to help hone student skills. What kind of tree is that? Whether you're hiking in the woods or simply sitting in your backyard, from Maine to New York you'll never be without an answer to that question, thanks to this handy companion to the trees of the Northeast. Featuring detailed information and illustrations covering each phase of a tree's

lifecycle, this indispensable guidebook explains how to identify trees by their bark alone--no more need to wait for leaf season. Chapters on the structure and ecology of tree bark, descriptions of bark appearance, an easy-to-use identification key, and supplemental information on non-bark characteristics--all enhanced by more than 450 photographs, illustrations, and maps--will show you how to distinguish the textures, shapes, and colors of bark to recognize various tree species, and also understand why these traits evolved. Whether you're a professional naturalist or a

parent leading a family hike, this new edition of Bark: A Field Guide to Trees of the Northeast is your essential guide to the region's 67 native and naturalized tree species. Much information is available for specific gravity and other properties of wood and bark, but it is widely scattered in the literature. This paper compiles information for estimation of biomass for 156 tree species found in North America for use in national forest inventory applications. We present specific gravities based on average green volume as well as 12 percent moisture content

volume for calculation of oven-dry biomass. Additional information is included on bark thickness, bark voids, and bark percentages by species and green and dry weight of wood and bark. -- A comprehensive collection of the best art and craft activities for young children. Others shift focus from process to the archaeology of maritime places from the Bering to the Torres Straits, providing highly detailed discussions of how living by and with the sea is woven into all elements of human life from subsistence to trade and to ritual. Of equal importance are more abstract

discussions of islands as natural places refashioned by human occupation, either through the introduction of new organisms or new systems of production and consumption. These transformation stories gain further texture (and variety) through close examinations of some of the more significant consequences of colonisation and migration, particularly the creation of new cultural identities. A final set of papers explores the ways in which the techniques of archaeological sciences have provided insights into the fauna of the islands and the human history of

such places."--

It is a history of different modes of reading and reception, from learned debate and individual study to public instruction and entertainment. It is a history of manufacture, craftsmanship, dissemination, reading and debate. Yet the history of books is not simply a question of material form, nor indeed of the history of reading and reception. The larger question is of the effect of textual production, distribution and reception - of how books themselves made history. To this end, each chapter of this volume, succinctly bounded by period

and geography, offers incisive and stimulating insights into the relationship between books and the story of their times. "Bible study, science, math, language arts, spelling and art with 12 'Character, connections': wisdom, faith, responsibility, diligence, honesty, cooperation, peaceableness, kindness, respect, obedience, thankfulness"--Page [1]. "Seven Myths of Native American History will provide undergraduates and general readers with a very useful introduction to Native America past and present. Jentz identifies the origins and remarkable staying power of these

myths at the same time he exposes and dismantles them." —Colin G. Calloway, Dartmouth College For too long, the Gulf Coast of Mexico has been dismissed by scholars as peripheral to the Mesoamerican heartland, but researchers now recognize that much can be learned from this region's cultures. Peoples of the Gulf Coast—particularly those in Veracruz and Tabasco—share so many historical experiences and cultural features that they can fruitfully be viewed as a regional unit for research and analysis. Native Peoples of the Gulf Coast of Mexico is the first book to

argue that the people of this region constitute a culture area distinct from other parts of Mexico. A pioneering effort by a team of international scholars who summarize hundreds of years of history, this encyclopedic work chronicles the prehistory, ethnohistory, and contemporary issues surrounding the many and varied peoples of the Gulf Coast, bringing together research on cultural groups about which little or only scattered information has been published. The volume includes discussions of the prehispanic period of the Gulf Coast, the ethnohistory of

many of the neglected indigenous groups of Veracruz and the Huasteca, the settlement of the American Mediterranean, and the unique geographical and ecological context of the Chontal Maya of Tabasco. It provides descriptions of the Popoluca, Gulf Coast Nahua, Totonac, Tepehua, Sierra „Šh-u (Otom'), and Huastec Maya. Each chapter contains a discussion of each group's language, subsistence and settlement patterns, social organization, belief systems, and history of acculturation, and also examines contemporary challenges to the

future of each native people. As these contributions reveal, Gulf Coast peoples share not only major cultural features but also historical experiences, such as domination by Hispanic elites beginning in the sixteenth century and subjection to forces of change in Mexico. Yet as contemporary people have been affected by factors such as economic development, increased emigration, and the spread of Protestantism, traditional cultures have become rallying points for ethnic identity. Native Peoples of the Gulf Coast of Mexico highlights the significance of the Gulf Coast for

anyone interested in the great encuentro between the Old and New Worlds and general processes of culture change. By revealing the degree to which these cultures have converged, it represents a major step toward achieving a broader understanding of the peoples of this region and will be an important reference work on these indigenous populations for years to come. Be inspired and delighted by Collage Workshop for Kids, a colorful art instruction book on collage techniques for children—made in cooperation with The Eric Carle Museum of Picture Book Art. Collage

Workshop for Kids pairs essays by educators from The Eric Carle Museum of Picture Book Art with instructions on collage technique. Chapters explore favorite art themes for kids and demonstrate how to work with colored tissue paper, newspaper, fabric and buttons, painted paper, torn paper, and more. In each chapter, Reggio-inspired author and teacher Shannon Merenstein explores each technique with original ideas. Members of the museum's education staff offer expert advice on creating art with children. Everything you need to know about collage is in this

book, making it a great reference for teachers, librarians, and parents. This teaching guide covers the identification, deterioration, and conservation of artifacts made from plant materials. Detailed information on plant anatomy, morphology, and development, focusing on information useful to the conservator in identifying plant fibers are described, as well as the processing, construction, and decorative techniques commonly used in such artifacts. A final chapter provides a thorough discussion of conservation, preservation, storage, and

restoration methods. This is a valuable resource to conservators and students alike. A charming new picture book, full of barks and plenty of heart. Dog bark. Tree bark. Let's go see bark. Until Bald Bernie decides a 'local girl' can't be trusted with private investigations, and replaces her with a new secretary - pretty, privileged, and white. So Su Lin's not the only person finding it hard to mourn Bernie after he's found dead in the filing room. And when her best friend's dad is

accused, she gets up to some sleuthing work of her own in a bid to clear his name. Su Lin finds out that Bernie may have been working undercover, trading stolen diamonds for explosives from enemy troops. Was he really the upright English citizen he claimed to be? Meanwhile, a famous assassin commits his worst crime yet, and disappears into thin air. Rumours spread that he may be dangerously close to home. Beneath the stifling, cloudless Singaporean summer, earthquakes of chaos and political unrest are breaking out. When a tragic loss shakes Su Lin's personal world to

its core, she becomes determined to find the truth. But in dark, hate-filled times, truth has a price - and Su Lin must decide how much she's willing to pay for it.

are of essential relevance to product designers, architects, artists and stylists, as they represent the starting point for every product and every architectural work. The book is an encyclopaedic compendium of around 1,000 terms in this field, from aerogel to marble to zirconium. It features traditional and frequently used materials, as well as new and unexpected ones. Their respective advantages and disadvantages are precisely described. In addition, terms related to production processes, such as upcycling or tanning, or that describe the properties of materials or are

closely related to the topic have also been included. 90 hands-on activities that have easy-to-follow directions. In Caribbean history, the European colonial plantocracy created a cultural diaspora in which African slaves were torn from their ancestral homeland. In order to maintain vital links to their traditions and culture, slaves retained certain customs and nurtured them in the Caribbean. The creation of lace-bark cloth from the lagetta tree was a practice that enabled slave women to fashion their own clothing, an exercise that was both a necessity, as clothing provisions

for slaves were poor, and empowering, as it allowed women who participated in the industry to achieve some financial independence. This is the first book on the subject and, through close collaboration with experts in the field including Maroon descendants, scientists and conservationists, it offers a pioneering perspective on the material culture of Caribbean slaves, bringing into focus the dynamics of race, class and gender. Focussing on the time period from the 1660s to the 1920s, it examines how the industry developed, the types of clothes made, and the people who wore them. The study

asks crucial questions about the social roles that bark cloth production played in the plantation economy and colonial society, and in particular explores the relationship between bark cloth production and identity amongst slave women. *Methods in Microbiology: Seeing the Inside* is the first detailed study of one of the world's great visual art traditions and its role in the society that produces it. The bark painting of Aboriginal artists in western Arnhem Land is the product of a unique tradition of many thousands of years' duration. In recent years it has

attracted enormous interest in the rest of Australia and beyond, with the result that the artists, who live primarily as hunters in this relatively secluded region of northern Australia, now paint for sale to the world art market. Though the richness and power of Aboriginal arts are now, belatedly, finding wide recognition, they remain insufficiently understood. In this thoroughly illustrated book Luke Taylor examines the creative methods of the bark painters and the cultural meaning of their work. He discusses, on the one hand, the arrangements which allow the artists to project

their culture onto an international stage, and on the other, the continuing social and religious roles of their paintings within their own society. The result is a remarkable and fascinating picture of artistic creativity in a changing world.
