*Increasing the Digital Divide*  
Aug 09 2022 The major objectives of this study were to ascertain if certain ethnic and racial groups of first-year Oregon State University

students are without access to online admission materials, and to determine what students' point of view are about computer access or applying to Oregon State University online. In addition, the demographics of the 1999-2000 Oregon State University class (online vs. paper applications, ethnicity, gender and age distribution) were analyzed. Despite the growing numbers of students utilizing technology in the admission process, the first part of this study has shown that female students, underrepresented students, and non-traditional students at Oregon State University, during the 1999-2000 academic year, still do not utilize the

electronic application process as much as their majority counterparts. In general, the online application process at Oregon State is being underutilized since only 18.6% (98 out of 528) of students applied via the web. Lastly, although students varied in technological abilities before coming to Oregon State University, all 48 students during the one-on-one telephone interview stated that they had utilized a computer and online services (either in their room, a friend's computer, the library, etc.) the day of the interview. This leads Oregon State University to believe it is successfully integrating students into

technology. Some of this is occurring by web registration, online access to the Valley Library (students are able to complete a good portion of their research without leaving their rooms), and instructors are developing webpages where students can retrieve assignments, course syllabi, class readings, notes, and more information regarding a particular course. Students demand access to these technologies in order to gain the knowledge and skills they need to compete in the job world. Admission professions working in institutions of higher education have the responsibility to meet this need. With leadership by

admission representatives in areas of planning, implementation, and campus-wide collaboration, information technology can significantly improve student learning and change the way in which students are educated for years to come.

*The College Application*

*Gauntlet* Jul 28 2021

This dissertation proceeds as three separate but related papers. Each works to investigate the importance of the many steps required to enroll in college such as taking the right courses in high school, taking the SAT or ACT, and ultimately completing college applications. The first paper

looks descriptively at how students move through the steps to four-year college enrollment. Few studies have examined the steps to college enrollment between college aspiration and college enrollment and how these steps might present a barrier to four-year college enrollment. This study used data from the Education Longitudinal Study: 2002 and employed a multivariate random effects logistic framework to examine the completion of nine steps to enrollment based on student background characteristics and the completion of prior steps. Racial and family income gaps in step completion can be mostly accounted for by

differences in academic preparation. Accounting for social and cultural capital reduced, but did not eliminate, remaining gaps. Finally, completion of early steps strongly predicts completion of later steps, though this momentum appeared much stronger for White students than Black or Hispanic ones. The findings suggest college coaching programs should target students early in their high school careers and work to foster college aspirations and provide information about steps to college enrollment. The second paper considers the college enrollment effects of state-required SAT and ACT testing. Since 2001 Colorado,

Illinois, and Maine have all enacted policies that require high school juniors to take college entrance exams--the SAT or the ACT. One goal of these policies was to increase college enrollment based on the belief that requiring students to take these exams would make students more likely to consider college as a viable option. Relying on quasi-experimental methods and synthetic control comparison groups, this article presents the effects of this state-mandated college entrance-exam testing. Based on both state- and individual-level analyses I find evidence that entrance exam policies were associated with increases in

overall college enrollment in Illinois and that such policies re-sorted students in all three states between different types of institutions. In particular, Colorado saw an increase in enrollment at private four-year institutions, while Illinois and Maine both saw a decrease in enrollment at public two-year institutions. Increases in enrollment at schools that require entrance exams for admissions support the hypothesis that lack of exam scores can present barriers to college entry. The third paper investigates the effect of using the Common Application, a standardized college application form that makes it easier for students to apply to

multiple colleges, on students' enrollment decisions. There is little research on how students' college decisions may be influenced by minor facets of the college admission process such as the relative difficulty of completing college applications. I demonstrate that these theoretically minor concerns are, in fact, quite important to the college enrollment process by studying students' use of the Common Application to apply to college. I take advantage of the change in colleges that accept the Common Application between the cohorts of students in the nationally representative NELS and ELS data sets and use an instrumental variables

approach to explore the causal effect of the Common Application on students' college enrollment choices and persistence. In theory, the ease of applying to multiple schools through the use of the Common Application has the potential to affect both whether and where students choose to apply to college and, subsequently, the quality of the student-college match. I find evidence that the Common Application does alter students' enrollment choices and has no effect on their likelihood of staying enrolled in college. Thus, despite the enormity of the college decision, small alterations to steps in the college enrollment process can affect high school

students' behavior.

*Admission Matters*

Oct 11 2022

Make sense of college

admissions and prepare a

successful application

Admission Matters offers

comprehensive, expert, and

practical advice for parents and

students to guide them through

the college admissions process.

From building a college list, to

understanding standardized

tests, to obtaining financial aid,

to crafting personal

statements, to making a final

decision, this book guides you

every step of the way with

clear, sensible advice and

practical tips. This new fourth

edition has been completely

updated to reflect the latest

changes in college admissions.

including new developments in

standardized testing, applications, financial aid and more. Questionnaires, interactive forms, checklists, and other tools help you stay focused and organized throughout the process.. With the answers you need and a down-to-earth perspective, this book provides an invaluable resource for stressed-out students and parents everywhere. Applying to college can be competitive and complex. Admission Matters offers real-world expert advice for all students, whether you're aiming an Ivy or the state school close to home. It also includes much needed guidance for students with special circumstances,

including students with disabilities, international students, and transfer students. In addition, athletes, artists and performers, and homeschoolers will find valuable guidance as they plan for and apply to college. Understand how the admissions process works and what you can and cannot control Learn how to build a strong list of good-fit colleges Craft a strong application package with a compelling personal statement Get expert advice on early admissions, financial aid, standardized testing, and much more Make a final decision that is the right one for you Whether you think you've got applying to college

under control or don't even know where to begin, Admission Matters is your expert guide throughout the college admissions process. Papermaking is a fascinating art and technology. The second edition of this successful 2 volume handbook provides a comprehensive view on the technical, economic, ecologic and social background of paper and board. It has been updated, revised and largely extended in depth and width including the further use of paper and board in converting and printing. A wide knowledge basis is a prerequisite in evaluating and optimizing the whole process chain to ensure efficient paper and board production. The same is true in their application and end use. The book covers a wide range of topics: \* Raw materials required for paper and board

manufacturing such as fibers, chemical additives and fillers \* Processes and machinery applied to prepare the stock and to produce the various paper and board grades including automation and trouble shooting \* Paper converting and printing processes, book preservation \* The different paper and board grades as well as testing and analysing fiber suspensions, paper and board products, and converted or printed matters \* Environmental and energy factors as well as safety aspects. The handbook will provide professionals in the field, e. g. papermakers as well as converters and printers, laymen, students, politicians

and other interested people with the most up-to-date and comprehensive information on the state-of-the-art techniques and aspects involved in paper making, converting and printing.

**Surface Application of Paper Chemicals** Apr 17 2023 With the exception of a slight hiccup during the height of the recent environmental movement

(during the early 1990s), when for a year or two consumers were prepared to pay a price premium for lower quality recycled paper than for the virgin product, the inexorable improvement in the quality demanded of paper products continues. This demand for quality covers not only the aesthetics of the product but also its performance. Moreover, it is becoming increasingly the case that papers designed for a particular use must, as it were incidentally, also perform well in alternative applications. An example is that of office and printing papers, which are expected to perform as well in copier machines as in all the

various forms of impact and non-impact printers. But even greater demands are made in other product areas, where board designed for dry foods can also be expected to protect moist and fatty materials and be made of 100% recycled fibre. The need to isolate foodstuffs from some of the contaminants that can affect recycled board is a serious challenge. Thus, papermakers are constantly striving to meet a broadening spectrum of demands on their products; often while accepting declining quality of raw materials. The product design philosophy that has arisen in response to this is increasingly to isolate the bulk of a paper from its uses: to

engineer the needed performance characteristics into the paper surfaces while more or less ignoring what happens inside.

**Washington State Notary Public Guide** May 18 2023

The Department of Licensing has worked to keep the notary public application process as

simple as possible. A prospective notary need only submit a complete application, proof of a \$10,000 surety bond, and appropriate fees to the Department of Licensing in order to begin the process. Once an applicant has completed all application requirements and proven that he or she is eligible, the Department will have a new certificate of commission mailed out promptly. New in 2018, notaries public can also apply for an electronic records notary public endorsement, which allows the notary to perform notarial acts on electronic documents as well as paper documents. The application process is similar to

the application process for the commission, and can be done at the same time or separately. Code of Public Instruction of the State of Washington Sep 10 2022
