Revisit the work of a pioneering innovator... • Explores the field of bacterial population genetics by highlighting the work of Thomas S. Whittam, best known for his work with enterohemorrhagic E. coli. • Features a compilation of research projects and ideas stemming from Dr. Whittam's work that presents a broad perspective on the historical development of bacterial population genetics. "A collection of ten short stories that all take place in the same day about kids walking home from school"-- The main objective of this book is to provide a comprehensive review on stem cells and their role in tissue regeneration, homeostasis and therapy. In addition, the role of cancer stem cells in cancer initiation, progression and drug resistance are discussed. The cell signaling pathways and microRNA regulating stem cell self-renewal, tissue homeostasis and drug resistance are also mentioned. Overall, these reviews will provide a new understanding of the influence of stem cells in tissue regeneration, disease regulation, therapy and drug resistance in several human diseases. This book presents the latest scientific

knowledge on inherited and acquired bone marrow failure syndromes, describing the advances in understanding of genetics and pathophysiology that have been achieved as a result of high-throughput DNA sequencing, RNA expression studies, and modern biochemistry techniques. The full range of relevant conditions is covered, including acquired aplastic anemia, Fanconi anemia, ribosomopathies, telomeropathies, dyskeratosis congenita, Shwachman-Diamond syndrome, Diamond-Blackfan anemia, and congenital neutropenias and thrombocytopenias. In addition, it is explained how the study of these rare diseases has uncovered important new science and elucidated the pathophysiology of more common hematological and oncological diseases. A treatment-specific chapter describes options ranging from the conventional to the cutting edge. Bone Marrow Failure will be of value for both trainee and practicing hematologists and oncologists. \$50 Billion of Advice in One Book\* Have you ever wondered why some books and stories are adapted into movies, and others aren't? Or wished you could sit down and pick the brains of the people whose stories have been adapted--or the screenwriters, producers, and directors who adapted them? Author John Robert Marlow has done it for you. He spoke to book authors, playwrights, comic book creators and publishers, as well as Hollywood screenwriters, producers and directors responsible for

adapting fictional and true stories into Emmy-winning TV shows, Oscar-winning films, billion-dollar megahits and smaller independents. Then he talked to the entertainment attorneys who made the deals. He came away with a unique understanding of adaptations--an understanding he shares in this book: which stories make good source material (and why); what Hollywood wants (and doesn't); what you can (and can't) get in a movie deal; how to write and pitch your story to maximize the chances of a Hollywood adaptation--and how much (and when) you can expect to be paid. \*This book contains the distilled experience of creators, storytellers and others whose works have earned over \$50 billion worldwide. Whether you're looking to sell film rights, adapt your own story (alone or with help), or option and adapt someone else's property--this book is for you. First Published in 2004. Routledge is an imprint of Taylor & Francis, an informa company. This two-volume work combines comprehensive information on the chemistry of the fluorinated heterocycles. The material has been divided such that the first volume is dedicated to 5-membered fluorinated heterocycles and macrocycles, while the second volume combines data connected with the chemistry of fluorine containing 6-membered heterocycles. Both volumes will be of interest to synthetic organic chemists in general, and particularly for those colleagues working in the fields of heterocyclic-

compound chemistry, materials chemistry, medicinal chemistry, and fluorine chemistry. All information is presented and classified clearly to be effective source for broad auditory of chemists. It will be interesting for scientists working in the field of inorganic and coordination chemistry. Fluorinated heterocycles are becoming increasingly important in many areas including the pharmaceutical industry, materials science and agriculture. The presence of fluorine can result in substantial functional changes in the biological as well as physicochemical properties of organic compounds. Incorporation of fluorine into drug molecules can greatly affect their physicochemical properties, such as bond strength, lipophilicity, bioavailability, conformation, electrostatic potential, dipole moment, pKa etc. as well as pharmacokinetic properties, such as tissue distribution, rate of metabolism and pharmacological properties, such as pharmacodynamics and toxicology. Vols. for 1963-include as pt. 2 of the Jan. issue: Medical subject headings. Following a three-year absence during which she was a man's mistress, a bar girl returns to her trade in the Ginza, Tokyo's red light district. At 38, it's a struggle, especially as Yoko Adachi has a tendency to tell her clients exactly what she thinks of them. Since its inception in 1945, this serial has provided critical and informative articles written by research specialists that integrate industrial, analytical, and technological aspects

of biochemistry, organic chemistry, and instrumentation methodology in the study of carbohydrates. The articles provide a definitive interpretation of the current status and future trends in carbohydrate chemistry and biochemistry. Features contributions from leading authorities and industry experts Informs and updates on all the latest developments in the field Pluripotent stem cells have the potential to revolutionise medicine, providing treatment options for a wide range of diseases and conditions that currently lack therapies or cures. This book describes recent advances in the generation of tissue specific cell types for regenerative applications, as well as the obstacles that need to be overcome in order to recognize the potential of these cells. Although still virtually unknown in the West, Ôoka Shôhei (1909-1988) is one of Japan's most important and influential writers and social critics. The Burdens of Survival is both a seminal English-language study of this preeminent literary figure and one of the first scholarly works to thoroughly examine the war literature of a major Japanese veteran-author. Drawing on Robert Jay Lifton's work on traumatic experience and survivor psychology, the book tells the illuminating story of Ôoka's arduous journey that began with guilt-ridden survival as a prisoner of war in the Philippines and culminated some twenty-five years later in the fruitful completion of survivor mission. David C. Stahl examines Ôoka's battlefield memoirs, including the

established war classic *Fires on the Plain* (1952), in terms of extreme experience, survivor guilt, bearing witness, and the "inability to mourn." Writing enabled Ôoka to give cathartic expression to his haunting battlefield experience and made it possible for him to move from blame-shifting to empathy and mourning. The lengthy, exhaustively researched historical work *The Battle for Leyte Island* (1967-1969) faithfully details the personal and collective experience of battle, depravation, and loss, and clarifies who and what was ultimately responsible for defeat. Toward the end of this work and *Return to Mindoro Island* (1969), Ooka draws attention to the outstanding obligations owed by his countrymen to the war dead and suggests how they can be fulfilled by public confrontation, learning the lessons of defeat, and using them to rectify lingering social and political evils. The social, psychological, and educational needs of Asian Pacific American youth often go unmet. This book, written by multicultural educators, social workers, psychologists, and others, challenges stereotypical beliefs and seeks to provide, basic knowledge and direction for working with this population, often labeled as "the model minority." Anti-war novel as seen from the point of view of a losing army. This volume explores the deeply interwoven connection of education, art and nature in the context of East Asia. With contributions from authors in South Korea, Japan and Taiwan, the book considers

unnoticed but significant themes involved in the interplay of nature, art, and education. It manifests how nature and art can educate, and how education and nature play the role of art. The chapters explore a range of themes relevant to East Asian characteristics, including skill acquisition, Japanese calendar arts and ritual of feelings, garden architecture, the ritualised body, collaborative poetry art, translational language between humans and nature, the Confucian classical Six Arts, the artistic embodiment of the Kyoto School, and the heritage art based education in Korea. The authors examine these themes in novel ways to bring to light the relevance of the East Asian insights to the contemporary global world. This book is an outstanding resource to all researchers, scholars, and students interested in educational aesthetics, philosophy of education, East Asian studies, comparative education and intercultural education.

Nonalcoholic fatty liver disease is one of the most common liver diseases worldwide affecting patients from all ages, races, and ethnic backgrounds. It comprises a spectrum of hepatic pathology ranging from simple steatosis, in which there is an increase of fat accumulation in hepatocytes, to nonalcoholic steatohepatitis and cirrhosis. The significant prevalence of this disease—between 15 and 45 percent of the general population—means that it contributes to an increased burden of ill health both today and in the future. *Liver Metabolism and Fatty Liver Disease* addresses the

current understanding of the development of nonalcoholic fatty liver disease as well as the clinical aspects of the disease by examining the current knowledge surrounding metabolism in the liver. The book discusses various topics including the involvement of oxidative stress, metabolic effects, and inflammation as well as the effect of nutrition on the development and progression of the disease. When a series of fires in Japan's capital points to foul-play, the famous samurai Judge Ooka puts 14-year-old Seikei on the case to discover who's behind them. Determined to prove his worth, Seikei poses as a teahouse attendant to gather information, and winds up entering the mysterious worlds of geishas and revenge. This study examines the history of the Japanese period film and proposes that a powerful relationship exists between the past and present in Japan's narrative tradition. The first section of the book analyzes the form and function of the Japanese period film, describing the unique iconography and characteristics of films set in the past. The author also examines how the period film has allowed Japanese filmmakers to circumvent government censorship by serving as a rhetorical device with which they can explore contemporary concerns through a criticism of the past. The final section of the book contains chapters that focus on the narrative in Japanese epic, religion, theater, and modern popular literature. A complete filmography and bibliography are included. Valerie Pang's DIVERSITY

AND EQUITY IN THE CLASSROOM bridges theory and practice using a student-centered and culture-centered approach based on a philosophy of social justice and equal outcomes for all. Students will learn why they should think about and value student culture as well as how to weave those values into the curriculum and classroom. Organized around social characteristics in response to the reality of people's multiple identities, the text emphasizes the intersectionality of diverse identities and promotes teachers' self-reflection of their own biases. Guided by social constructivism as the cognitive foundation for learning, the text's extensive strategies and methods ensure that teachers learn how to address prejudice and integrate culturally relevant teaching in their curriculum and classroom instruction. Checklists, teaching tips, and tools for classroom use are highlighted throughout. Principles of Cloning, Second Edition is the fully revised edition of the authoritative book on the science of cloning. The book presents the basic biological mechanisms of how cloning works and progresses to discuss current and potential applications in basic biology, agriculture, biotechnology, and medicine. Beginning with the history and theory behind cloning, the book goes on to examine methods of micromanipulation, nuclear transfer, genetic modification,

and pregnancy and neonatal care of cloned animals. The cloning of various species—including mice, sheep, cattle, and non-mammals—is considered as well. The Editors have been involved in a number of breakthroughs using cloning technique, including the first demonstration that cloning works in differentiated cells done by the Recipient of the 2012 Nobel Prize for Physiology or Medicine – Dr John Gurdon; the cloning of the first mammal from a somatic cell – Drs Keith Campbell and Ian Wilmut; the demonstration that cloning can reset the biological clock - Drs Michael West and Robert Lanza; the demonstration that a terminally differentiated cell can give rise to a whole new individual – Dr Rudolf Jaenisch and the cloning of the first transgenic bovine from a differentiated cell – Dr Jose Cibelli. The majority of the contributing authors are the principal investigators on each of the animal species cloned to date and are expertly qualified to present the state-of-the-art information in their respective areas. First and most comprehensive book on animal cloning, 100% revised Describes an in-depth analysis of current limitations of the technology and research areas to explore Offers cloning applications on basic biology, agriculture, biotechnology, and medicine This book for the first time gives an overall view of the current situation in urbanization of meteorological and air quality models around the world. It discusses and makes recommendations on the best practice and strategy for

urbanization of different types of meteorological and air quality models. Based on the selected presentations given at the COST728 workshop, the contributions are arranged in four parts: urban morphology and databases; parameterizations of urban canopy; strategy for urbanization of different types of models; and evaluation and city case studies / field studies. The chapters treat either dynamic (on wind and turbulent) and thermal effects (on temperature and energy in general). The final chapter of this volume summarizes the discussion and conclusions from the four main topics and provides recommendations and future requirements. This monograph is oriented towards numerical weather prediction and air quality modelling communities. This book summarizes the latest research on drug and gene delivery to the central nervous system (CNS). The chapters address safety concerns regarding the nanotechnology that is needed to develop nanomedicine for clinical practice. Particular focus is given to new technologies that have emerged in recent years to deliver therapeutic materials, such as genes, drugs, and other agents using nanotechnologies of diverse origin. This is an ideal book for students, teachers, researchers, and clinicians interested in a deeper understanding of nanotechnological advances in therapeutic medicine. This book also: Broadens readers' understanding of viral vector gene delivery to the brain for treating neurogenetic

diseases as well as targeted gene delivery into the brain using microbubble-facilitated focused ultrasound Covers in detail the latest developments in delivering therapeutic materials, such as siRNA delivery to the brain for treating neurological diseases, neuroprotective effects of gelatin nanoparticles in stroke, and nanowired drug delivery for brain diseases, heat stroke, and CNS injury Enriches understanding of new technologies for delivering therapeutic materials treating Alzheimer's Disease, including targeted nanodrug delivery through the blood-brain barrier and the superior neuroprotective effects of nanowired drug delivery in Alzheimer's Disease THE NEW YEAR BRINGS NEW RELATIONSHIPS—AND NEW FEELINGS. Hachiman is enjoying a relaxed winter break—until he runs into Yukino and Hayato and realizes he may know less than he thought about their history and relationship. Rumors are already circulating by the time classes resume, and when a new request comes to the Service Club, Hachiman will have to look beneath the surface to see a new side of his schoolmates... "Don't give up, and your feelings will reach!" It's time for the famous inter-school flying broom race, and everyone is betting on Diana to win! But when she falls ill, who's going to take her place? And what will become of Akko and Luna Nova?! The mirthful magical fantasy series concludes! A collection of seventeen folktales about the legendary Japanese judge Ooka, whose ingenuity and desire for

justice help him solve knotty problems in inventive ways. While attempting to solve the mystery of a stolen jewel, Seikei, a merchant's son who longs to be a samurai, joins a group of kabuki actors in eighteenth-century Japan. Our knowledge of reproductive biology has increased enormously in recent years on cellular, molecular, and genetic levels, leading to significant breakthroughs that have directly benefitted in vitro fertilization (IVF) and other assisted reproductive technologies (ART) in humans and animal systems. *Animal Models and Human Reproduction* presents a comprehensive reference that reflects the latest scientific research being done in human reproductive biology utilizing domestic animal models.
