Aviation Airworthiness Alerts

"The Federal Aviation Administration established a research program to conduct a destructive evaluation of two aged airplanes (both Cessna 402 models) used in commuter service. The intent of the program was to provide insight into the condition of a typical aged airplane by determining if a correlation exists between the airplane's maintenance history and current condition from a safety of flight perspective. This document supports this research program by providing the findings of a teardown evaluation of a 1979 Cessna 402C model airplane. The results in this report will provide information for use in future investigations into the aged small airplane fleet and help determine if additional research is required to address any problems observed."--p. [ii]. "To determine if potential continuing airworthiness problems exist for the small airplane fleet as a function of the aging process, the Federal Aviation Administration (FAA)

established a research program to conduct a destructive evaluation of two aged airplanes (both Cessna 402 models) used in the commuter service. The intent of the program is to provide insight into the condition of a typical aged airplane and to see if a correlation exists between its maintenance history and current condition from a safety of flight perspective. This report provides a summary and comparison of the findings from the teardown examination of a 1969 Cessna 402A and a 1979 Cessna 402C model airplane in support of the research program."--Report documentation page. Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.
