Meeting the standards of the Illinois Department of Education, this reference covers science and technology, life science, physical science, Earth systems and the universe, cell

biology, heredity, evolution, and organismal biology and ecology. (Study Guides) Includes 27 competencies/skills found on the MTTC Biology test and 150 sample-test questions. This guide, aligned specifically to standards prescribed by the Michigan Department of Education, covers the sub-areas of Foundations of Scientific Inquiry, Cellular Function, Heredity and Evolutionary Changes, Organization of Living Things, and Ecological Systems. HUMAN HEREDITY, 9e, International Edition presents the concepts underlying human genetics in clear,

concise language and engages non-Biology majors with examples that they can apply to themselves, their families, and their work environment. Author Michael Cummings explains the origin, nature, and amount of genetic diversity present in the human population and how that diversity has been shaped by natural selection. The artwork and accompanying media support visual learners by teaching rather than merely illustrating the ideas under discussion. Examining the social, cultural, and ethical implications associated with the use of genetic technology,

Cummings prepares students to become well-informed consumers of genetic-based health care services or providers of health care services. "Unlike other teacher certification test preparation material, our MTTC Biology study guide drills all the way down to the focus statement level, providing detailed examples of the range, type, and level of content that appear on the test. Completely aligned with current MTTC exam, this book provides the support you need to study and pass the exam with confidence! This study guide includes one practice test to help you test your

knowledge, understand how the exam is weighted, and identify skills and competencies you need to focus on. Our detailed answer explanations reference related skills in the book, allowing you to identify your strengths and weaknesses and interact with the content effectively. Maximize your study by prioritizing domains and skills you need to focus on the most to pass the exam. This study guide is perfect for college students, teachers, and career-changing professionals who want to teach Biology in Michigan." This life science guide contains sample

test questions on such things as cell structures and processes, heredity, and interdependence of life and environmental systems. (Study Guides) Why Do Genetics Matter to You? This book is a summary of "The Gene: An Intimate History," by Siddhartha Mukherjee. Siddhartha Mukherjee's book chronicles the fascinating history of discovery in classical genetics, molecular genetics, genetic engineering, and the human genome project. It shows: * How our genes and the environment define our identities and personalities; * How genetic engineering

technologies can be used to manufacture drugs safely; and * How genetic diagnosis and gene therapies can be used to treat complex genetic diseases. Genetics is at the frontiers of science today, and its impact is often misunderstood. The public is often misled by science fiction and remains largely in the dark as to the actual consequences of advances in the biotechnology and genetic engineering industries. Studying genetics can help you understand the economic, social, and ethical implications of these technologies. Read this book to understand the key concepts of genetics and the economic, social,

and ethical implications of the genetic engineering technologies. This guide includes: *

- Book Summary—helps you understand the key concepts. *
- Online Videos—cover the concepts in more depth. Value-added from this guide: *

Save time *

Understand key concepts * Expand your knowledge

The Genetics: The Study of Heredity Student Learning Guide includes self-directed readings, easy-to-follow illustrated explanations, guiding questions, inquiry-based activities, a lab investigation, key vocabulary review and assessment review questions, along with a post-

test. It covers the following standards-aligned concepts: How Trait are Inherited; Chromosomes & Karyotypes; Gregor Mendel; Mendel's Experiments; Dominant and Recessive Traits; Punnett Squares; Phenotypes & Genotypes; Codominance; and Making a Pedigree. Aligned to Next Generation Science Standards (NGSS) and other state standards.
