Corporate Customers Acceptance of Internet Banking: A Case Study of East African Trade Finance Customers Apr 17 2020 It is increasingly more interesting to the bank managers to understand what is important to customers when it comes to Internet banking, and especially banking conducted by the customers themselves. Corporate customers and Internet banking have been studied very modestly in the past, especially the decision-making factors that drive customers to go online. The purpose of this research is to identify the factors that influence corporate customer's adoption of Internet banking services in Kenya, Uganda, Tanzania and Rwanda. The hypotheses are empirically evaluated by the use of Trade Finance customers of an East African bank that serves as a target sample. The Technology Acceptance Model (TAM) is the primary basis for the study. The information gathered from former studies that are mainly concentrating on private customers, acts as a foundation for the development of an extension of TAM that is suitable for corporate customers. The study involves 137 respondents from Kenya, Uganda, Tanzania and Rwanda. Due to the quantitative nature of the study, the results are analysed with statistical measures which include the use of SPSS in order to carry out regression analysis.

A Credit Crunch? a Case Study of Finland in the Aftermath of the Banking Crisis Feb 08 2022 This paper estimates a disequilibrium model of credit supply and demand to evaluate whether there was a credit crunch in Finland following the banking crisis of

1991-92. Empirical analysis suggests that the marked reduction in bank lending was mainly in reaction to a cyclical decline in credit demand, likely exacerbated by the high level of indebtedness of the borrowers. It also appears that banks became less willing to supply credit during periods associated with a deterioration in asset quality, and reduced profits due to declining regulatory protection from competition, and a need to increase capital adequacy levels.

Movement of companies. A case study: Deutsche Bank Jul 21 2020 Essay from the year 2008 in the subject Business economics - Business Management, Corporate Governance, grade: A, Cardiff University, course: International Business Management, language: English, abstract: Nowadays the movement of a company abroad has become a very complex question. A business organization has to understand that the international environment has changed in the past twenty years. Today the global economy operates all around the world. There opened new, interesting markets e.g. China or Russia. The figure of international companies has risen faster as originally expected. Kotler et al (2001) argue many other industries as well as the global financial system have become more difficult to understand. According to Valdez (2000), in 1999 Deutsche Bank was ranked number one of the world's largest banks by assets with \$865bn. Today its ranked number 6, but only number 23 according to profitability. It can be said that Deutsche is an investment Bank which deals with the needs of high net worth individuals e.g. deposits, loans and investment advice. Furthermore it is one of Europe's most powerful and successful banks. However, in 2003 Deutsche Bank has threatened to move from Germany to the United Kingdom (UK). In 2003 The Sunday Times reported that plans exist to move from Germany either to Switzerland, USA or UK because of Germany's anti-business culture and the complicated impractical laws. (online) Some of the international experienced managers would support the concept. An added reason given by a manager from Frankfurt (Main) headquarter is the poor performance of German companies which sounds like an excuse to move abroad. Rapid decisions are very difficult just as to be flexible. It seems that Deutsche's manager wanted to benefit through a relocation to New York or a huge merger with a Swiss bank e.g. Credit Suisse.

The BBC (online, 2003) observed one day later that Deutsche Bank has indicated the movement. (online) Although the bank has become globally it is a historically grown company with its origin in Germany.

Social Entrepreneurship and Innovation Aug 14 2022 Social innovation and social entrepreneurship look for creative and affordable solutions to specific societal problems. Fuelled by the spread of the internet and the ubiquity of mobile phones, there are more people working to solve pressing social and environmental problems in the world today than ever before in human history. Social Entrepreneurship and Innovation presents the journeys of pioneering - and often accidental - social innovators who, faced with a problem, used their courage, tenacity and creative thinking to find a solution. Instead, readers will gain a realistic insight into the challenges and an engaging look at the problem-solving mindset needed to overcome them. Social Entrepreneurship and Innovation is an invaluable resource for social entrepreneurs and innovators looking for new ideas and insight into what really works - and what doesn't. This book is an inspiring read for anyone with a social conscience and a desire to change their world for the better.

The Politics of Financial Risk, Audit and Regulation Nov 17 2022

The biggest corporate failure ever in British history occurred in 2008 with very little forewarning. The management of HBOS, a major national bank with a long history of prudence prior to the merger in 2001, were allowed to act incompetently. Auditors and regulators failed to act, ignoring a key senior whistleblower, and the 'competitive' stock market failed to spot management failure in time. This book is the first academic study of this collapse, uncovering some surprising evidence on the power and politics of large financial institutions. It details the processes and degrees to which financial challenge and regulation are undermined by this power. The research exposes a pro-active process of regulatory risk management by these institutions; the ease with which auditors and regulators can be captured; and how politicians and investors can be all too happy to hop on the stock market and management spin ride - with other people's money. The study questions the ideology and politics which supported and encouraged the management hubris, raising profound questions about the 'politics' of the academic disciplines of banking, finance and accounting today, and the theories they underpin. This account of management gone wrong is essential reading for students, researchers and professionals involved in banking, finance, credit infrastructure, economics and management studies.

Structural Reforms in Industry, Banking and Finance Oct 04 2021 The year 1991 marked an important watershed in the economic history of post-Independent India. The country went through a severe economic crisis triggered by a serious balance of payments situation. The crisis was converted into an opportunity to introduce some fundamental changes in the content and approach to economic policy. The purpose of this book is to detail the structural reform process undertaken by India and to evaluate its results. In the post-liberalization period, the country has moved to a higher growth path. Objective conditions exist for the economy to grow at a sustained rate of seven per cent. The slow growth in agriculture and the consequent impact of a slower decline in poverty reduction are areas of concern.

Bioengineering Case Studies Sep 22 2020 "Bio-Stabilization Case Studies: Treatment and Performance Evaluation" describes and evaluates 30 projects from across the United States where bio-stabilization was employed to address a detrimental naturally occurring process or byproduct of the built environment. Bio-stabilization (or soil bioengineering) refers to the use of plant materials, primarily live cuttings, arranged in the ground in different arrays to reinforce soils and protect upland slopes and/or stream banks against surficial erosion and shallow slope failures. Examples included in the collection represent different regions of the country and their specific conditions and challenges. Each project is illustrated with a number of distinctive photographs to support the reader's understanding and showcase the wide scope of projects and techniques presented. The volume is ideal for civil and environmental engineers and environmental scientists working on watershed, infrastructure projects, and municipal scale installations.

Decision Making Dec 26 2020 Originally published in 1968, Richard Chapman's pioneering work illuminates the process of decision making by analysis of a particular example: the decision to raise the Bank Rate in September, 1957. The legal responsibility for a decision may be easy to pinpoint; in this case the Court of Directors of the Bank of England bear this but six weeks of negotiation separate their formal statement from the Chancellor of the Exchequer's advice to the Treasury to consider effecting 'a measure of deflation in the economy'. These six weeks of consultation between the Bank and the Treasury proceeding in 'the pattern of a formal dance' are analysed and a necessary by-product of this case-study is a closer understanding of how the Treasury and the Bank of England work together. These details are derived mainly from the evidence, and deductions from it, presented to the Bank Rate Tribunal and the Radcliffe Committee on the Working of the Monetary System. Professor Chapman gives his particular findings about decision making a wider application still by forming reasoned hypotheses and informed generalisations about public administration in Britain.
