rarefatto elettricamente conduttore soggetto a un campo magnetico. *Advances in Molecular Spectroscopy, Volume 1* covers the proceedings of the Fourth Meeting of Molecular Spectroscopy, held in Bologna, Italy on September 7-12, 1959. This book is organized into three parts encompassing 69 chapters. The first part presents first some experimental and correlations studies on molecular structure, followed by discussions on the application of molecular spectroscopic techniques for molecular structure determination. Part II reviews experimental determination of Raman intensities, vibrations of aromatic rings, and IR spectra and electronic structure of various organic compounds. Part III considers the general theories on molecular spectroscopy. This topic is followed by surveys on electron energy, orbital valency, relations among potential energy of diatomic molecules, and determination of rotation structure. This book will be of value to molecular spectroscopists and analytical and organic chemists. *Fuels and New Propellants* is a compendium of papers presented at a conference on Fuel and New Propellants by the Federazione Associazioni Scientifiche e Tecniche, sponsored by the Consiglio

Nazionale Delle Ricerche, held at Milan, Italy in June 1963. The book presents the researches made on the scientific, technical, and industrial applications of new and improved fuels and propellants. The collection contains papers that deal with residual fuels and the marine diesel engine; the characteristics of processes for the production of high octane fuels; liquid and solid propellants for space rockets; and technical problems in the production of solid and liquid propellants. Petrochemists, chemists, and researchers in the field of fuels and propellants will find this text interesting and insightful. Nelson Fausto

The Greek myth of Prometheus with its picture of a vulture feasting on its chained victim has traditionally provided a visual image of liver regeneration. It is a powerful and frightening representation but if one were to substitute the vulture by a surgeon and Prometheus by a patient laying on a properly prepared operating table, the outcome of the procedure would not differ significantly from that described by Greek poets. Yet few of us who work in the field have stopped long enough to ask where this myth originated. Did the poet observe a case of liver regeneration in a human being? Was

it brilliant intuition or perhaps, literally, just a 'gut feeling' of a poet looking for good rhymes that led to the prediction that livers grow when part of the tissue is removed? This book does not attempt to solve these historical issues. It does, instead, cover in detail some of the major modern themes of research on liver regeneration, injury and repair. As indicated in Dr. N. Bucher's chapter, the modern phase of experimental studies on liver regeneration started in 1931 with the publication by Higgins and Anderson of a method to perform a two-thirds resection of the liver of a rat. The technique described has 3 remarkable features: 1) it is highly reproducible, resulting in the removal of 68% of the liver, 2) it has minimal if any mortality, and 3) it consists only of blood vessel ligation and does not involve cutting through or wounding hepatic tissue.

[ILLUSTRATO IN B/N] Dal punto di vista dell'Uomo, la nostra è stata l'unica luna per milioni di anni. A partire dal 7 gennaio 1610, Galileo ed i suoi successori hanno scoperto centinaia di nuove lune all'interno del nostro sistema planetario. Oggi conosciamo tutte le lune maggiori e siamo costantemente a caccia di quelle piccole ed

evanescenti che orbitano lontano dai loro pianeti o attorno a grandi e remoti asteroidi. Dopo lo storico allunaggio del 1969, l'umanità è riuscita per ora ad atterrare solamente su un'altra luna: Titano. In questo libro sono elencate tutte le lune conosciute, la loro esplorazione e le loro principali caratteristiche. Scopriremo su di esse un'infinita varietà di ambienti ed incontreremo formazioni geologiche mai viste sulla Terra. Questo eserciziaro si rivolge agli studenti che abbiano nozioni di base di chimica generale per prepararsi ai laboratori e agli esami di chimica analitica qualitativa e quantitativa inorganica. Oltre 220 esercizi e problemi suddivisi in capitoli per argomento, tutti con risoluzione, quasi tutti con svolgimento, commenti e indicazioni per prevenire gli errori più comuni. Gli argomenti principali sono le reazioni chimiche in soluzione acquosa e le applicazioni nei primi corsi di chimica analitica: equilibri acido-base e soluzioni tampone, equilibri di solubilità e precipitazioni selettive, reazioni di complessazione e reazioni redox applicate nelle titolazioni. Ogni capitolo ha richiami essenziali di teoria per risolvere gli

esercizi proposti, riferimenti precisi per la indispensabile consultazione di uno dei testi di teoria consigliati (i "classici" di Harris e di Skoog&West), alcuni esercizi semplici e un po' ripetitivi per fissare i concetti di base, problemi tratti da temi d'esame e da esercitazioni di laboratorio. Può essere un valido aiuto per chi si trova a preparare l'esame senza aver potuto seguire il corso. Un'intera parte dedicata ai temi d'esame permette di rivedere tutto il programma svolto nel corso. These volumes chart the fundamental - methodological and analytical - change in economics that arose in the second half of the nineteenth century. The main characteristics of this change included an increasing reliance on mathematical methods, a revolution in the theory of value, and the rise of general equilibrium theory. This collection traces this long revolution over a fifty-year period for the first time, from William Stanley Jevons' *The Theory of Political Economy* (1871), to Eugen Slutsky's *On the Theory of the Budget of the Consumer* (1915).
