The book presents high-quality research papers presented at 4th International Conference on Intelligent Computing and Advances in Communication (ICAC 2021) organized by Siksha 'O' Anusandhan, Deemed to be University, Bhubaneswar, Odisha, India, in November 2021. This book brings

out the new advances and research results in the fields of theoretical, experimental, and applied signal and image processing, soft computing, networking, and antenna research. Moreover, it provides a comprehensive and systematic reference on the range of alternative conversion processes and technologies. This collection contains new results in the topological classification of integrable Hamiltonian systems. Recently, this subject has been applied to interesting problems in geometry and topology, classical mechanics,

mathematical physics, and computer geometry. This new stage of development of the theory is reflected in this collection. Among the topics covered are: classification of some types of singularities of the moment map (including non-Bott types), computation of topological invariants for integrable systems describing various problems in mechanics and mathematical physics, construction of a theory of bordisms of integrable systems, and solution of some problems of symplectic topology arising naturally within this theory. A list of unsolved

problems allows young mathematicians to become quickly involved in this active area of research. This monograph summarizes what we know about summarizing, and offers a detailed analysis of professional summarizing. A computer simulation of the cognitive processes in expert summarizers is offered on the accompanying CD-ROM. The conventional wisdom holds that the president of the United States is weak, hobbled by the separation of powers and the short reach of his formal legal authority. In this first-ever in-depth

study of executive orders, Kenneth Mayer deals a strong blow to this view. Taking civil rights and foreign policy as examples, he shows how presidents have used a key tool of executive power to wield their inherent legal authority and pursue policy without congressional interference. Throughout the nation's life, executive orders have allowed presidents to make momentous, unilateral policy choices: creating and abolishing executive branch agencies, reorganizing administrative and regulatory processes, handling emergencies, and determining how

legislation is implemented. From the Louisiana Purchase to the Emancipation Proclamation, from Franklin Roosevelt's establishment of the Executive Office of the President to Bill Clinton's authorization of loan guarantees for Mexico, from Harry Truman's integration of the armed forces to Ronald Reagan's seizures of regulatory control, American presidents have used executive orders (or their equivalents) to legislate in ways that extend far beyond administrative activity. By analyzing the pattern of presidents' use of

executive orders and the relationship of those orders to the presidency as an institution, Mayer describes an office much more powerful and active than the one depicted in the bulk of the political science literature. This distinguished work of scholarship shows that the U.S. presidency has a great deal more than the oft-cited "power to persuade." This book reflects the evolution of a vibrant discipline in its chosen. The Impact of Nursing Knowledge on health Care Informatics. Nursing Informatics has changed the practice, defining new roles for nursing in education,

research, patient care and administration. reaching out into industry, government and consultancies. The range of issues addressed in this book is extraordinary, including nursing language, cognitive skills, education and training, nursing research, systems design, decision support, patient record, patient management, standards and more. It also clarifies values, strategies and practices central to the profession of nursing. This book is a part of the global network, building bridges between teachers, students, clinicians, administrators and

researchers around the world and creating a lasting bond. The paper describes initial efforts on creating a system for the automatic assessment of Swedish second language (L2) learner essays from two points of view: holistic evaluation of the reached level according to the Common European Framework of Reference (CEFR), and the lexical analysis of texts for receptive and productive vocabulary per CEFR level. We describe the data and resources that our experiments were based on, provide a short introduction to the algorithm for essay classification and experiment results,

present the user interface we developed for testing new essays, and outline future work. [For the complete volume of short papers, see ED572005.]. Nick Higham follows up his successful HWMS volume with this much-anticipated second edition. First multi-year cumulation covers six years: 1965-70. This book constitutes the refereed proceedings of the 12th International Conference on Intelligent Data Engineering and Automated Learning, IDEAL 2011, held in Norwich, UK, in September 2011. The 59 revised full papers presented were carefully reviewed and

selected from numerous submissions for inclusion in the book and present the latest theoretical advances and real-world applications in computational intelligence. There is no available information at this time. Author will provide once available. This book offers students a method for understanding and mastering the rhetorical patterns that comprise expository writing. Its exercises ask students to arrange jumbled sentences into logical order, forming model essays for standard rhetorical patterns such as comparison/contrast, classification, and thesis support.

These techniques force students to see the basic logic of different writing patterns. The goal of Whimbey's workbook is to teach the student to write concise and original essays on any topic. This book covers a wide range of important topics including but not limited to Technology Trends, Computing, Artificial Intelligence, Machine Vision, Communication, Security, e-Learning, and Ambient Intelligence and their applications to the real world. The sixth Future Technologies Conference 2021 was organized virtually and received a total of 531 submissions

from academic pioneering researchers, scientists, industrial engineers, and students from all over the world.. After a double-blind peer review process, 191 submissions have been selected to be included in these proceedings. One of the meaningful and valuable dimensions of this conference is the way it brings together a large group of technology geniuses in one venue to not only present breakthrough research in future technologies, but also to promote discussions and debate of relevant issues, challenges, opportunities and research findings. We hope that

readers find the book interesting, exciting, and inspiring; it provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research. This book contains best selected research papers presented at ICTCS 2022: Seventh International Conference on Information and Communication Technology for Competitive Strategies. The conference will be held in Chandigarh, India, during December 9-10, 2022. The book covers state-of-the-art as well as emerging topics pertaining to ICT and effective

strategies for its implementation for engineering and managerial applications. This book contains papers mainly focused on ICT for computation, algorithms and data analytics and IT security. The work is presented in two volumes. Efficient design management solutions for today's new challenges

Design Management: Process and Information Issues is a collection of papers presented at the 13th International Conference on Engineering Design in Glasgow, Scotland. One of four volumes, this book highlights the newest developments in design management

and the solutions that facilitate innovation. Focused on common challenges within the design process, these papers provide insight gleaned from current and ongoing work to help design and engineering teams meet the increasing demands of the modern product development environment.

Researching can be a daunting task, but once one learns efficient research techniques and proper format and documentation, the process becomes much easier. This book teaches both these techniques and formats. This user-friendly book continues to be a leading book for teaching research

techniques and current practices in research documentation. Spiral-bound, the book is structured to correspond to the step-by-step process of writing research papers, from the initial research to the documentation of sources Its description of library use illustrates both print and electronic sources, including more than 50 examples of proper documentation. Discussions of computer catalogs, the Internet, and CD-ROM bring readers up to date on the most recent innovations in library research techniques. While stressing the MLA style throughout, the author also

discusses APA style in depth, and includes a sample paper in that style. The major chapters contain exercises to reinforce the most important points, and the bibliography serves as a reliable reference source for 24 different fields. Anyone who needs to write and research. The ISC Class 11 sample Paper for English Paper-1, English Paper-2, Physics, Chemistry & Biology 2022-2023 is considered by an expert panel to be one of the best ISC reference books for class 11 English Paper-1, English Paper-2, Physics, Chemistry & Biology exam. It includes MCQs & objective type questions for ample

practice. Students of class 11 shouldn't leave any stone unturned, and therefore this is the best ISC reference book for class 11 English Paper-1, English Paper-2, Physics, Chemistry & Biology exam as it's curated with latest ISC specimen papers. The ISC Class 11 sample Paper for English Paper-1, English Paper-2, Physics, Chemistry & Biology 2022-2023 includes 10 sample question paper which are further divided into 5 solved and 5 self-assessment papers which are strictly designed as per the latest CISCE syllabus & board specimen paper making it the best ISC reference book for class 11 English

Paper-1, English Paper-2, Physics, Chemistry & Biology exam. On top of that, the ISC Class 11 sample Paper for English Paper-1, English Paper-2, Physics, Chemistry & Biology 2022-2023 on-tips notes and revision notes for 1000+ concepts for quick and advanced revision. The ISC Class 11 sample Paper for English Paper-1, English Paper-2, Physics, Chemistry & Biology 2022-2023 also contains Mind Maps and Mnemonics for robust learning to prepare for ISC class 11 exams 2023. This best ISC reference book for the class 11 English Paper-1, English Paper-2, Physics, Chemistry &

Biology exam contains 200+ MCQs and objective-type questions for robust practice and score maximum in the ISC exam. It contains proper explanations for all the ISC exam questions that students might encounter in exams. The ISC Class 11 sample Paper for English Paper-1, English Paper-2, Physics, Chemistry & Biology 2022-2023 will assist in understanding the dos and don'ts for the ISC class 11 exams. This ISC reference book for the class 11 English Paper-1, English Paper-2, Physics, Chemistry & Biology exam provides a holistic approach toward

learning, and therefore, enhances the preparation level of students making it the best ISC Class 11 sample Paper for English Paper-1, English Paper-2, Physics, Chemistry & Biology 2022-2023 This book highlights the recent research on hybrid intelligent systems and their various practical applications. It presents 97 selected papers from the 22nd International Conference on Hybrid Intelligent Systems (HIS 2022) and 26 papers from the 18th International Conference on Information Assurance and Security, which was held online, from 13 to 15 December

2022. A premier conference in the field of artificial intelligence and machine learning applications, HIS-IAS 2022, brought together researchers, engineers and practitioners whose work involves intelligent systems, network security and their applications in industry. Including contributions by authors from over 35 countries, the book offers a valuable reference guide for all researchers, students and practitioners in the fields of Computer Science and Engineering. The intention of the authors is to examine the relationship between piecewise

linear structure and differential structure: a relationship, they assert, that can be understood as a homotopy obstruction theory, and, hence, can be studied by using the traditional techniques of algebraic topology. Thus the book attacks the problem of existence and classification (up to isotopy) of differential structures compatible with a given combinatorial structure on a manifold. The problem is completely "solved" in the sense that it is reduced to standard problems of algebraic topology. The first part of the book is purely geometrical; it proves that every

smoothing of the product of a manifold M and an interval is derived from an essentially unique smoothing of M . In the second part this result is used to translate the classification of smoothings into the problem of putting a linear structure on the tangent microbundle of M . This in turn is converted to the homotopy problem of classifying maps from M into a certain space PL/O . The set of equivalence classes of smoothings on M is given a natural abelian group structure. The intention of the authors is to examine the relationship between piecewise linear structure and differential

structure: a relationship, they assert, that can be understood as a homotopy obstruction theory, and, hence, can be studied by using the traditional techniques of algebraic topology. Thus the book attacks the problem of existence and classification (up to isotopy) of differential structures compatible with a given combinatorial structure on a manifold. The problem is completely "solved" in the sense that it is reduced to standard problems of algebraic topology. The first part of the book is purely geometrical; it proves that every smoothing of the product of a

manifold M and an interval is derived from an essentially unique smoothing of M . In the second part this result is used to translate the classification of smoothings into the problem of putting a linear structure on the tangent microbundle of M . This in turn is converted to the homotopy problem of classifying maps from M into a certain space PL/O . The set of equivalence classes of smoothings on M is given a natural abelian group structure. The contributions in this volume represent the latest research results in the field of Classification, Clustering, and Data Analysis. Besides the theoretical analysis,

papers focus on various application fields as Archaeology, Astronomy, Bio-Sciences, Business, Electronic Data and Web, Finance and Insurance, Library Science and Linguistics, Marketing, Music Science, and Quality Assurance. This book constitutes the refereed proceedings of the Third Pacific Rim Symposium on Image and Video Technology, PSIVT 2008, held in Tokyo, Japan, in January 2009. The 39 revised full papers and 57 posters were carefully reviewed and selected from 247 submissions. The symposium features 8 major themes including all

aspects of image and video technology: image sensors and multimedia hardware; graphics and visualization; image and video analysis; recognition and retrieval; multi-view imaging and processing; computer vision applications; video communications and networking; and multimedia processing. The papers are organized in topical sections on faces and pedestrians; panoramic images; local image analysis; organization and grouping; multiview geometry; detection and tracking; computational photography and forgeries; coding and steganography;

recognition and search; and reconstruction and visualization. Due to the ability to handle specific characteristics of economics and finance forecasting problems like e.g. non-linear relationships, behavioral changes, or knowledge-based domain segmentation, we have recently witnessed a phenomenal growth of the application of computational intelligence methodologies in this field. In this volume, Chen and

Wang collected not just works on traditional computational intelligence approaches like fuzzy logic, neural networks, and genetic algorithms, but also examples for more recent technologies like e.g. rough sets, support vector machines, wavelets, or ant algorithms. After an introductory chapter with a structural description of all the methodologies, the subsequent parts describe novel applications of these to typical

economics and finance problems like business forecasting, currency crisis discrimination, foreign exchange markets, or stock markets behavior. This book is the collection of the Abstract / Short Papers submitted by the authors of the International Conference of The CLAssification and Data Analysis Group (CLADAG) of the Italian Statistical Society (SIS), held in Milan (Italy) on September 13-15, 2017.
