This book takes a developmental perspective at the use of scoring rubrics to assess student work. Citing developmental characteristics of each age, the author presents examples and adaptations of assessment rubrics on a variety of subjects for teachers from kindergarten through adult/college. After a presentation of foundation information on rubrics, separate chapters are devoted to each grade level from primary through adult. Written so that each chapter can be addressed independently, the book provides additional chapters devoted to assessing technological topics and using rubrics with students with special needs. The final chapters provide practical information to help teachers to create their own rubrics and to covert rubric scores to letter grades. An updated annotated listing of recommended rubric websites is included. "Covering the basics of planning, collecting, and evaluating, each of the 50 standards-based exercises in this book address one or more of the ACRL Information Literacy Competency Standards for Higher Education and promote conceptual and applied skills via active learning, problem-based learning, and resource-based learning."--[back cover] *Engaging College and University Students* outlines creative and effective course organization and teaching-learning strategies for higher education courses. By describing specific instructional best practices, rather than addressing general questions about teaching in higher education, the author presents a valuable resource for educators to consult in the moment. The author explores the challenges of engaging students in online settings and draws comparisons with face-to-face strategies of engagement. By organizing the strategies according to course progress, and offering corresponding rubrics for assessment, this guide for instructors offers a solid foundation for an ever-changing teaching and learning landscape. The conventional wisdom in English education is that rubrics are the best and easiest tools for assessment. But sometimes it's better to be unconventional. In *Rethinking Rubrics in Writing Assessment*, Maja Wilson offers a new perspective on rubrics and argues for a better, more responsive way to think about assessing writers' progress. Though you may sense a disconnect between student-centered teaching and rubric-based assessment, you may still use rubrics for convenience or for want of better alternatives. *Rethinking Rubrics in Writing Assessment* gives you the impetus to make a change, demonstrating how rubrics can hurt kids and replace professional decision making with an inauthentic pigeonholing that stamps standardization onto a notably nonstandard process. With an emphasis on thoughtful planning and teaching, Wilson shows you how to reconsider writing assessment so that it aligns more closely with high-quality instruction and avoids the potentially damaging effects of rubrics. Stop listening to the conventional wisdom, and turn instead to a compelling new voice to find out why rubrics are often replaceable. Open *Rethinking Rubrics in Writing Assessment* and let Maja Wilson start you down the path to more sensitive, authentic style of writing assessment. It's a must-read for any faculty member seeking to understand how to use assessment not just to measure performance but also to enhance it, and it delivers some of the most current, innovative ideas for meeting that challenge. It presents new: Thinking about what grades should measure Ideas for developing robust assessment tools Strategies for encouraging students to pursue knowledge instead of grades Ways to ensure that assessments gauge performance and inspire effort A collection of more than 30 articles written by a score of highly accomplished college classroom veterans, *Grading Strategies for the College Classroom* was edited by Maryellen Weimer, Ph.D., author, editor of *The Teaching Professor* newsletter, and award-winning professor emerita of teaching and learning at Penn State Berks. The book's articles, first published in *The Teaching Professor*, address four critical aspects of the assessment process: grading exams, assessing papers, gauging participation, and engaging students in meaningful conversations about grades. *Grading Exams* The authors present creative solutions for the challenges of grading exams. Articles cover: Alternatives to final exams, including reflective exercises and concept-mapping projects Research showing why cumulative exams may be a better teaching tool than unit exams How-tos for designing, administering, and managing security concerns for online exams Policies that reduce test anxiety and mitigate morale problems *Grading Papers* This material is equally innovative when it comes to the challenges of assigning and assessing papers. Articles present a wealth of high-impact ideas, including: A unique carrot-and-stick method to encourage students to create drafts of papers Ten practical tips for successfully managing the paper-grading burden A manageable process-driven approach to grading that can be a lifesaver, particularly for new faculty A critical reexamination of the value of rubrics in grading papers Best and worst practices in grading papers *Classroom Participation* Chapter three focuses on a perennial ambiguous grading area, classroom participation, providing insight into how student perceptions of participation can differ from those of faculty and how to reconcile the two. The authors share strategies for: Creating a participation rubric Helping students appreciate the difference between mere attendance and participation Assessing and grading online participation Reconciling rubrics with student self-assessments Talking with Students about Grades The book's final section addresses the difficult subject of managing expectations and conversations about students' grades. This process begins on the first day of class and continues past the final exam. Topics include how to: Answer the question "What will we be graded on?" Handle the "I deserve a better grade on this" conversation Involve students in determining assignment weights and how this impacts performance Deal with students' growing sense of entitlement The learning "story" that takes place over the course of a semester is rich, complex, and unique to each student. The details of how an individual progresses (or does not) over the term, what skills are developed, and what knowledge is retained could fill a book. And yet in the end, professors are asked to tell the story not in a book, on a page, over a paragraph, or even in a sentence, but in a single letter. Small wonder grading is such a persistent challenge for both new and veteran faculty. The foreword is by Barbara E. Walvoord, Ph.D., professor emerita of the University of Notre Dame and author of several classic books on higher ed assessment and grading, including *Effective Grading: A Tool for Learning and Assessment*" The first edition of *Assessing Student Learning* has become the standard reference for college faculty and administrators who are charged with the task of assessing student learning within their institutions. The second edition of this landmark book offers the same practical guidance and is designed to meet ever-increasing demands for improvement and accountability. This edition includes expanded coverage of vital assessment topics such as promoting an assessment culture, characteristics of good assessment, audiences for assessment, organizing and coordinating assessment, assessing attitudes and values, setting benchmarks and standards, and using results to inform and improve teaching, learning, planning, and decision making. There has been a remarkable growth of interest in the assessment of student learning and its relation to the process of learning in higher education over the past ten years. This interest has been expressed in various ways – through large scale research projects, international conferences, the development of principles of assessment that supports learning, a growing awareness of the role of feedback as an integral part of the learning process, and the publication of exemplary assessment practices. At the same time, more limited attention has been given to the underlying nature of assessment, to the concerns that arise when assessment is construed as a measurement process, and to the role of judgement in evaluating the quality of students' work. It is now timely to take stock of some of the critical concepts that underpin our understanding of the multifarious relationships between assessment and learning, and to explicate the nature of assessment as judgement. Despite the recent growth in interest noted above, assessment in higher education remains under-conceptualized. This book seeks to make a significant contribution to conceptualizing key aspects of assessment, learning and judgement.
