This book explores the phenomenon of Rainbow Gatherings in Europe. These countercultural events form radically alternative temporary societies in the peripheries of modern states and manage themselves without centralized power, market economy or institutionalized forms of religion. The volume offers a vivid description of life in the Gatherings, analyses the main ideological tenets and places the meetings in historical and cultural context. It considers how the Rainbow Gathering tradition is rooted in networks of alternative spirituality and environmental counterculture but also reflects broader shifts in religion and religiosity. Argues for the impeachment of President George W. Bush, based on an analysis of the Constitution and the circumstances under which he has violated its provisions. Tradecraft Primer: A Framework for Aspiring Interrogators is a timely and relevant reference manual for a new generation of professionals as we enter a new era in our nation's interrogation programs. A must-read for anyone thinking of entering the interrogation profession, whether in law enforcement, the military, or intelligence, it provides fresh insights from the latest empirical-based studies that will enhance your results and contribute to best practices. It challenges past beliefs and legacy interrogation practices of previous generations by capturing novel approaches that no longer rely on physical and psychological coercion, unethical or questionable ruses, or abusive mistreatment. Importantly, this primer also opens the door to valuable lessons from contemporary experts in human motivation and more effective social influence methodologies and tactics while you learn of the art and science behind rapport-building, effective communication constructs, and the influence of interpersonal and intrapersonal dynamics for use inside the interrogation room. In addition, it captures the "interrogation cycle" as a handy reference graphic. By reading this primer, you will learn how to reduce incidences of false confessions, mitigate eyewitness misidentification, and gain simple contemporary insights to outsmart liars and discern truth-tellers from deceivers. As an advocate for a sea change in the way our nation's interrogation programs are run and managed, this primer encourages a team approach to interrogations and emphasizes active engagement and oversight by supervisors in efforts to corroborate interrogation outcomes. It also asserts the need for the adoption of a common code of ethics shared among all practitioners—an ethical code created in deference to our nation's Constitution, statutes, international treaties, and the policies of our nation's leaders. One that encompasses the pledge and built on two underlying principles: Do no harm and respect human rights. Building on Goldman's Words of Intelligence and Maret's On Their Own Terms this is a one-stop reference tool for anyone studying and working in intelligence, security, and information policy. This comprehensive resource defines key terms of the theoretical, conceptual, and organizational aspects of intelligence and national security information policy. It explains security classifications, surveillance, risk, technology, as well as intelligence operations, strategies, boards and organizations, and methodologies. It also defines terms created by the U.S. legislative, regulatory, and policy process, and routinized by various branches of the U.S. government. These terms pertain to federal procedures, policies, and practices involving the information life cycle, national security controls over information, and collection and analysis of intelligence information. This work is intended for intelligence students and professionals at all levels, as well as information science students dealing with such issues as the Freedom of Information Act. Today, supply chain transformation for creating customer value continues to be a priority for many companies, as it enables them to gain a competitive advantage. While value creation is shaped by external drivers such as market volatility, technology, product and service offering and disruption, it can be stymied by the internal stresses arising from the need to minimize costs, limitations in process redesign, waste minimization and the unavailability of knowledge capital. Therefore, for companies to survive and prosper, the relevant questions to ask would be how to identify the external/internal forces driving changes and how to map the business drivers to the attributes of transformation. While the contemporary supply chain is well-structured, the evolving economic system is causing disruptions to this structure. The emergence of novel business paradigms – non applicability of the traditional laws of supply and demand, dominance of negative externality effects and anomalies of high growth rate coexisting with high supply side uncertainty – must be recognized in transforming supply chains. For example, healthcare delivery and humanitarian relief do not follow known supply/demand relationships; the negative externality effects are increasing sustainability concerns; and emerging economies, with dysfunctional business infrastructure, must manage high growth rates. This book delves into the transformation issues in supply chains and extends the concepts to incorporate emerging issues. It does so through ten chapters, divided into three sections. The first section establishes the framework for transformation, while the second focuses on the transformation of current chains in terms of products, processes, supply base, procurement, logistics and fulfillment. Section three is devoted to capturing the key issues in transforming supply chains for emerging economies, humanitarian relief, sustainability and healthcare delivery. This work will be of interest to both academics and industrial practitioners and will be of great value to graduate students in business and engineering. It raises many questions, some provocative and provides many leads for in-depth research. Several approaches are suggested for new problems along with a discussion of case studies and examples from different industries. "Here, my previous edition of Viruses, Plagues, & History is updated to reflect both progress and disappointment since that publication. This edition describes newcomers to the range of human infections, specifically, plagues that play important roles in this 21st century. The first is Middle East Respiratory Syndrome (MERS), an infection related to Sudden Acute Respiratory Syndrome (SARS). SARS was the first new-found plague of this century. Zika virus, which is similar to yellow fever virus in being transmitted by mosquitos, is another of the recent scourges. Zika appearing for the first time in the Americas is associated with birth defects and a paralytic condition in adults. Lastly, illness due to hepatitis viruses were observed prominently during the second World War initially associated with blood transfusions and vaccine inoculations. Since then, hepatitis virus infections have afflicted millions of individuals, in some leading to an acute fulminating liver disease or more often to a life-long persistent infection. A subset of those infected has developed liver cancer. However, in a triumph of medical treatments for infectious diseases, pharmaceuticals have been developed whose use virtually eliminates such maladies. For example, Hepatitis C virus infection has been eliminated from almost all (>97%) of its victims. This incredible result was the by-product of basic research in virology as well as cell and molecular biology during which intelligent drugs were designed to block events in the hepatitis virus life-cycle"-- This book evaluates American foreign policy actions from the perspective of great power responsibility, with three case studies: Operation Iraqi Freedom, American drone strikes in Pakistan and the post- 9/11 practice of extraordinary rendition. This book argues that the US invasion of Iraq in 2003, American drone attacks in Pakistan and the practice of extraordinary rendition are the examples of irresponsible actions undertaken by the U.S. acting as a great power in international society. Focusing on a major theoretical approach of International Relations, the English School, this book considers the responsibilities of great powers in international society. It points to three obligations of great powers: to act according to the norm of legality, to act according to the norm of legitimacy, and to adhere to the principles of prudence. The author applies the criteria of legality, legitimacy and prudence, to analyse the three foreign policy endeavours of the U.S., and, developing a normative framework, clarifies the implications for future U.S. foreign policy. This book will be of strong interest to students and scholars of international relations, international relations theory, American politics, foreign policy studies, international law, South Asian studies and Middle Eastern studies. The responses of governments and international institutions to terrorism raise some of the most controversial issues of the twenty-first century. In particular, attempts to balance the desire to achieve security with the safeguarding of human rights and other aspects of the rule of law have proved to be highly contentious. This book is unique, not only in terms of its multinational, multidisciplinary nature, but also due to its truly comprehensive approach. It reviews, and examines, the interrelationship between the four principal elements of the international rule of law framework (international human rights, humanitarian, criminal, and refugee/asylum law) within in which counter-terrorism responses should occur. It focuses primarily on some of the most pressing, emerging, and/or under-researched issues and tensions. These include policy choices associated with meeting security imperatives; the tensions between the criminal justice, or preventive, approach to counter-terrorism and the military approach; the identification of lacunae within existing legal frameworks; and tensions between executive, judicial, and legislative responses. These matters are examined at the national, regional, and international levels. The book addresses a wide spectrum of issues, including analysis of key legal principles; emergency and executive measures; radicalization; governmental and institutional impunity; classification, administration and treatment of battlefield detainees; the use of lethal force ; forms of, and treatment in, detention; non-refoulement; diplomatic assurances; interrogation versus torture; extraordinary rendition; discrimination; justice and reparations for victims of terrorist attacks and security responses; (mis)use of military courts, commissions, and immigration tribunals; judicial and institutional developed and emerging rule of law norms on terrorism; non-judicial oversight by means of democratic accountability; and the identification and analysis of best practices, including inter-regional judicial and other forms of cooperation, and developed practices for the handling and use of sensitive information. Drawing together an impressive spectrum of legal and non-legal, national and institutional, practitioner, policy, and academic expertise, this book is an essential and comprehensive reference work on counter-terrorism policy, practice, and law-making. U.S. treatment of enemy combatants and terrorist suspects captured in Afghanistan, Iraq, and other locations has been a subject of debate, incl. whether such treatment complies with U.S. statutes and treaties. Congress approved additional guidelines concerning the treatment of detainees via the Detainee Treatment Act (DTA). Among other things, the DTA contains provisions that: (1) require DoD personnel to employ U.S. Army Field Manual guidelines while interrogating detainees; and (2) prohibit the ¿cruel, inhuman and degrading punishment of persons under the detention, custody, or control of the U.S. Gov¿t.¿ This report discusses provisions of the DTA concerning standards for the interrogation and treatment of detainees. International Law in the U.S. Legal System provides a wide-ranging overview of how international law intersects with the domestic legal system within the United States, and points out various unresolved issues and areas of controversy. Curtis Bradley covers all of the principal forms of international law: treaties, decisions and orders of international institutions, customary international law, and jus cogens norms. He also explores a number of issues that are implicated by the intersection of U.S. law and international law, such as foreign sovereign immunity, international human rights litigation, war powers, extradition, and extraterritoriality. This book highlights recent decisions and events relating to the topic (including decisions and events arising out of the war on terrorism), while also taking into account relevant historical materials, including materials relating to the U.S. Constitutional founding. Written by one of the most cited international law scholars in the United States, the book is a resource for lawyers, law students, legal scholars, and judges from around the world. " This document provides the comprehensive list of Chinese National Standards - Category: GB, GB/T Series of year 2016. A bracing critique of human rights law and activism from the perspective of the Global South. How are human rights norms made, who makes them, and why? In Human Rights Standards, Makau Mutua traces the history of the human rights project and critically explores how the norms of the human rights movement have been created. Examining key texts and documents published since the inception of the human rights movement at the end of World War II, he crafts a bracing critique of these works from the hitherto underutilized perspective of the Global South. Attention is focused on the deficits of the international order and how that order, which is defined by multiple asymmetries, defines human rights in a

manner that exhibits normative gaps and cultural biases. Mutua identifies areas of further norm development and concludes that norm-creating processes must be inclusive and participatory to garner legitimacy across various cleavages and divides. The result is the first truly comprehensive critical look at the making of human rights norms and standards and, as such, will be an invaluable resource for students, scholars, activists, and policymakers interested in this important topic. Makau Mutua is SUNY Distinguished Professor and Floyd H. and Hilda L. Hurst Faculty Scholar at SUNY Buffalo Law School. He is the author of *Kenya's Quest for Democracy: Taming Leviathan and Human Rights: A Political and Cultural Critique*. This book is to help architects, design teams and University clients (estates departments, and academics) in their pursuit of practical and innovative solutions for the creation of enabling higher education learning environments. It includes abundant examples of solutions to design problems and advice on best practice. This book argues that investment in the higher education sector is a driver for intellectual, social and economic development, offering opportunities for positive impacts for the physical environment on the character and performance of higher education. The editor believes that good outcomes result from good design, which should address elements such as learning from best current practice, the importance of clear briefing, good environmental performance, the positive social impacts and, also, the importance of ensuring a beautiful outcome. It has chapters contributed from leading-edge practices, including case studies with highly illustrated project examples. All this is underpinned by an understanding of the practicalities of working in the sector as well as the socio-political and economic context and trends shaping future practice. Appropriate laws and regulations are essential tools to direct the action of procurers toward the public good and avoid corruption and misallocation of resources. Common laws and regulations across regions, nations and continents potentially allow for the further opening of markets and ventures to newcomers and new ideas to satisfy public demand. Law and Economics of Public Procurement Reforms collects the original contributions related to the new European Union Directives approved in 2014 by the EU Parliament. They are of both economists and lawyers, and have been presented in a manner that allows for exchanges of views and "real time" interaction. This book features, for each section, an introductory exchange between two experts of different disciplines, made up of a series of sequential interactions between an economist and a lawyer, which enriches the liveliness of the debate and improve the mutual understanding between the two professions. Four sections characterize this book: Supporting social considerations via public procurement; Green public procurement; Innovation through innovative partnerships; and Lots - The Economic and Legal Challenges of Centralized Procurement. These themes have current relevance of the new European Public Procurement Directives. Written by an impressive array of experts in their respected fields, this volume is of great importance to practitioners who work in the field of EU public procurement in the Member States of the EU, as well as academics and students who study public finance, public policy and regulation. Polymer Nanocomposite Materials Discover an authoritative overview of zero-, one-, and two-dimensional polymer nanomaterials Polymer Nanocomposite Materials: Applications in Integrated Electronic Devices delivers an original and insightful treatment of polymer nanocomposite applications in energy, information, and biotechnology. The book systematically reviews the preparation and characterization of polymer nanocomposites from zero-, one-, and two-dimensional nanomaterials. The two distinguished editors have selected resources that thoroughly explore the applications of polymer nanocomposites in energy, information, and biotechnology devices like sensors, solar cells, data storage devices, and artificial synapses. Academic researchers and professional developers alike will enjoy one of the first books on the subject of this environmentally friendly and versatile new technology. Polymer Nanocomposite Materials discusses challenges associated with the devices and materials, possible strategies for future directions of the technology, and the possible commercial applications of electronic devices built on these materials. Readers will also benefit from the inclusion of: A thorough introduction to the fabrication of conductive polymer composites and their applications in sensors An exploration of biodegradable polymer nanocomposites for electronics and polymer nanocomposites for photodetectors Practical discussions of polymer nanocomposites for pressure sensors and the application of polymer nanocomposites in energy storage devices An examination of functional polymer nanocomposites for triboelectric nanogenerators and resistive switching memory Perfect for materials scientists and polymer chemists, Polymer Nanocomposite Materials: Applications in Integrated Electronic Devices will also earn a place in the libraries of sensor developers, electrical engineers, and other professionals working in the sensor industry seeking an authoritative one-stop reference for nanocomposite applications. Bringing together scholars, public intellectuals, and activists from across the field of education, the Handbook of Public Pedagogy explores and maps the terrain of this burgeoning field. For the first time in one comprehensive volume, readers will be able to learn about the history and scope of the concept and practices of public pedagogy. What is 'public pedagogy'? What theories, research, aims, and values inform it? What does it look like in practice? Offering a wide range of differing, even diverging, perspectives on how the 'public' might operate as a pedagogical agent, this Handbook provides new ways of understanding educational practice, both within and without schools. It implores teachers, researchers, and theorists to reconsider their foundational understanding of what counts as pedagogy and of how and where the process of education occurs. The questions it raises and the critical analyses they require provide curriculum and educational workers and scholars at large with new ways of understanding educational practice, both within and without schools. " Computational thinking (CT) is a timeless, transferable skill that enables you to think more clearly and logically, as well as a way to solve specific problems. With this book you'll learn to apply computational thinking in the context of software development to give you a head start on the road to becoming an experienced and effective programmer. This symposium is a follow-up to one held in China in 1986. Since then considerable progress has been made in research and development of hybrid rice. This second international symposium was held under the umbrella of the International Rice Research Conference. Eighty scientists and seed production experts from 18 countries, IRRI and FAO attended. Contributions covered breeding, biotechnology, seed production, agronomy, plant physiology, plant pathology, entomology and economics. Terrorism, sadly, seems here to stay and to stay with a vengeance. It turns out that the United States was not prepared for it and now must play catch-up. In doing so, even agreement on how to define terrorism is in doubt and what to do about it seems beyond comprehension at the moment. This volume presents a broad cross section of analyses of weaknesses and actions in the ongoing battle including cyberterrorism, international terrorism, and societal implications of terrorism. The movement of Asian citizens across continents now occurs on an unprecedented scale. What are the interests of Asian tourists and what are the impacts on host communities? This book addresses questions about Asian tourist contact with unfamiliar countries and cultures and the implications for the marketing, planning and policy of tourist markets. Based on a systematic and empirical comparative study of six European Union countries, Christel Querton explores judicial decision-making in the context of persons fleeing armed conflicts in the EU. Addressing and redressing misconceptions about the relevance of the Refugee Convention, this book demonstrates how appellate authorities across the EU approach situations of armed conflict predominantly through outdated understandings of warfare and territoriality. Thus, they apply a higher standard of proof than is warranted by international refugee law. Adopting a gender perspective, Querton also shows how appellate authorities fail to acknowledge the gender-differentiated impact of armed conflicts. Drawing from gender and security studies, this book proposes an original conceptual framework which, supported by existing international legal standards, reframes the definition of 'refugee' and better reflects the reality of violence in modern-day conflicts. In doing so, it re-asserts the Refugee Convention as the cornerstone of international protection. This Selected Issues paper discusses the structure of the financial sector in Chad and describes the key macro-financial linkages. Macro-financial linkages in Chad are driven by a government sector that dominates economic activities in the more modern sectors of the economy, thanks to oil-related revenues. The main macro-financial linkages are indirect through the associated sharp fiscal adjustment and the government's quest for additional financing. Direct credit risks linked to the oil sector appear limited. However, there seems to be a link between declining oil prices and deteriorating banking soundness indicators. The current economic conditions negatively affect private companies dependent on public contracts, potentially hitting the health of banks' loan portfolios. This book presents the only contemporary legal analysis of refugee detention at Guantánamo Bay under the US Migrant Interdiction Program. This book is a printed edition of the Special Issue "Hybrid Advanced Optimization Methods with Evolutionary Computation Techniques in Energy Forecasting" that was published in Energies Documents the various abuses that occurred during the Bush Admin. relating to the House Judiciary Committee's review and jurisdiction, and to develop a comprehensive set of recommendations to prevent the recurrence of these or similar abuses in the future. Contents: Preface: ¿Deconstructing the Imperial Presidency,¿ which describes and critiques the key war power memos that gave rise to the concept of broad-based, unreviewable, and secret presidential powers in time of war. Also describes specific abuses of the Imperial Presidency relating to Judiciary Comm. inquiries. Includes a comprehensive set of 47 policy recommendations designed to respond to the abuses and excesses of the Bush Imperial Presidency. And bigger than all of that, I knew that sometimes you had to do the impossible like eat oysters or go shopping even when you could hardly breathe because that is what people did when they truly loved one another and it had nothing to do with freckles or anklebones or lipstick." Dave is dying. Chrissie, Mum, Nan and Badger are going to be left behind. Because sometimes life is like that. "painted love letters" ... a story of the heart. Generating of agricultural wastes and by-products during the production, processing and consumption of agricultural commodities is unavoidable and over the last decades, an increased public interest has been shown in the challenge of food wastage. Apart from its significant quantities, the physicochemical characteristics of the various agricultural waste and by-products denote that there is immense potential for their reuse, recycle, and valorisation through various different processes. Green Extraction and Valorization of By-Products from Food Processing provides an overview about the valorization or reuse of agricultural wastes and by-products during the production, processing and consumption of agricultural commodities. Waste disposal and by-product management in food processing industry pose problems in the areas of environmental protection and sustainability. However, they could be a great source of valuable nutraceuticals, which can be used to deal with the prospects of feeding fast growing population in 21st century. Features: Gives detailed guidance and presents case-studies about valorization of food wastes and by-products Shows the main conventional and innovative extraction techniques for food waste and by-products valorization Provides an estimated idea regarding the recovery of high-added value compounds Discusses the recovery of high-added value compounds Perspectives originated from the enormous amounts of food related materials that are discharged worldwide and the existing technologies, which promise the recovery, recycling and sustainability of high-added value ingredients inside food chain will be discussed in this book. This book is of value to academics, research institutes, and food industry engineers particularly the research and development professionals who are looking for effective management and utilization of food processing wastes and byproducts. In addition, it is suitable for undergraduate, post-graduate students, research scholars, postdoctoral fellows and faculty members from universities and colleges who pursue academic careers in Food Technology, Food Biotechnology, Fermentation and Bioengineering, Bioprocess Technology, Food science and Technology. Terrorism and crime are two areas of knowledge that have traditionally been looked at independently. In this timely and original text, two of the leading authors in the field provide a clear and thorough look at terrorism from a criminological perspective. Integrating the latest research, the book explores the motives of criminals and terrorists, the causes of crime and terrorism and the impact of the law and the legal system. Central to this exploration, the authors examine the nexus between criminal and terrorist organizations, and the commonalities and differences between them and what this means for public policy and safety within states. Cross-cultural and international in perspective, this is a fresh and original text that will appeal to undergraduates, academics, and researchers in criminology, politics, international relations, sociology, communication and cultural studies. Compact Criminology is an exciting series that invigorates and challenges the international field of criminology. Books in the series are short, authoritative, innovative assessments of emerging issues in criminology and criminal justice – offering critical, accessible introductions to important topics. They take a global rather than a narrowly national approach. Eminently readable and first-rate in quality, each book is written by a leading specialist. Compact Criminology provides a new type of tool for teaching, learning and research, one that is flexible and light on its feet. The series addresses fundamental needs in the growing and increasingly differentiated field of criminology. Drawing on a postcolonial legal history of the United States' territorial expansionism, this book provides an analysis of the foundations of its global empire. Charles R. Venator-Santiago argues that the United States has developed three traditions of territorial expansionism with corresponding constitutional interpretations, namely colonialist, imperialist, and global expansionist. This book offers an alternative interpretation of the origins of US global expansion, suggesting it began with the tradition of territorial expansionism following the 1898 Spanish–American War to legitimate the annexation of Puerto Rico and other non-contiguous territories. The relating constitutional

interpretation grew out of the 1901 Insular Cases in which the Supreme Court coined the notion of an unincorporated territory to describe the 1900 Foraker Act's normalization of the prevailing military territorial policies. Since then the United States has invoked the ensuing precedents to legitimate a wide array of global policies, including the 'war on terror'. Puerto Rico and the Origins of US Global Empire: The Disembodied Shade combines a unique study of Puerto Rican legal history with a new interpretation of contemporary US policy. As such, it provides a valuable resource for students and scholars of the legal and historical disciplines, especially those with a specific interest in American and postcolonial studies. The Oxford Handbook of National Security Intelligence is a state-of-the-art work on intelligence and national security. Edited by Loch Johnson, one of the world's leading authorities on the subject, the handbook examines the topic in full, beginning with an examination of the major theories of intelligence. It then shifts its focus to how intelligence agencies operate, how they collect information from around the world, the problems that come with transforming "raw" information into credible analysis, and the difficulties in disseminating intelligence to policymakers. It also considers the balance between secrecy and public accountability, and the ethical dilemmas that covert and counterintelligence operations routinely present to intelligence agencies. Throughout, contributors factor in broader historical and political contexts that are integral to understanding how intelligence agencies function in our information-dominated age. The book is organized into the following sections: theories and methods of intelligence studies; historical background; the collection and processing of intelligence; the analysis and production of intelligence; the challenges of intelligence dissemination; counterintelligence and counterterrorism; covert action; intelligence and accountability; and strategic intelligence in other nations.
