Presents the American Nephrology Nurses' Association (ANNA), a professional organization headquartered in Pitman, New Jersey. Recounts the history of ANNA. Provides information about upcoming events, chapters, educational programs, publications, special interest groups, scholarships, and professional certification. Includes information about the standards of clinical practice and the core curriculum for nephrology nursing. Posts contact information via mailing address, telephone and fax numbers, and e-mail. Acute is described on MedicineNet.com as an illness with an abrupt onset that is often of short duration, rapidly progressive, and in need of urgent care. Once the symptoms appear, they can change or worsen swiftly. Synonyms of acute include severe, critical, drastic, dire, dreadful, terrible, awful, grave, bad, serious, desperate, and dangerous. The nurses who work with patients with acute kidney injury (AKI) know these descriptions are accurate. They also know that there is enough information to warrant a separate module devoted to AKI. The work of Helen Williams, who served as the module's editor, is greatly appreciated. This module offers information on managing an acute care program, causes of AKI, and the nutritional needs of the patient. Hemodialysis, water treatment, peritoneal dialysis, continuous renal replacement therapy (CRRT), slow low-efficiency daily dialysis (SLEDD), and therapeutic apheresis are all topics addressed in this module. There is also a new chapter that nurses in the chronic setting will find useful; it addresses the patient who has a ventricular assist device (VAD). More patients with VADs are requiring dialysis, yet there has been little published on this subject. Nutrition in Kidney Disease, Second Edition addresses the relationships between nutrition and (1) normal kidney function and disease, (2) the progressiveness of chronic kidney disease (CKD) and strategies to prevent further compromise, and (3) the treatment and management of kidney failure especially during medical crises, such as acute kidney injury and its consequent nutritional therapies (e.g., enteral and parenteral

nutrition). Demographic patterns, trends and outcomes in the current health care systems are explored in the United States and abroad. Disease prevention and management are presented over the entire lifespan, beginning with pregnancy, followed by infancy, childhood, adolescence, and adulthood, concluding with the elder years. Foundations for clinical practice are established by devoting a complete section towards conducting a comprehensive nutritional assessment, comprising of anthropometric, biochemical, clinical, physical parameters and psychosocial concerns unique to the kidney disease population. Nutritional therapy is also discussed across the spectrum of kidney disease, and pertinent aspects critical to successful management of disorders and conditions, such as bone disease, obesity, and nephrotic syndrome are explored. Nutrition in Kidney Disease, Second edition highlights cutting edge research in regards to exercise and functional outcomes, malnutrition and the inflammatory response, experimental therapies, and the use of complementary and alternative medicine, with a special emphasis on relevant preventative strategies. Kidney disease and cancer are frequent comorbidities that require specialized knowledge and expertise from both the nephrologist and the oncologist. Written by three pioneers in this growing subspecialty, Onco-Nephrology provides authoritative, definitive coverage of the mechanism and management of these two life-threatening diseases. This unique, single-volume resource covers current protocols and recommends management therapies to arrest kidney failure and allow oncologic treatments to continue and succeed. Addresses acute and chronic kidney diseases that develop from a variety of cancers. This includes direct kidney injury from the malignancy, paraneoplastic effects of the cancer, and various cancer agents used to treat the malignancy. Discusses key issues regarding kidney disease in patients with cancer, including conventional chemotherapeutic regimens and new novel therapies (targeted agents and immunotherapies) or

the malignancies themselves that may promote kidney injury; patients with chronic kidney disease who acquire cancer unrelated to renal failure; and kidney transplantation, which has been shown to carry an increased risk of cancer. Contains dedicated chapters for each class of the conventional chemotherapeutic agents, targeted cancer agents, and cancer immunotherapies including the basic science, pathogenic mechanisms of injury, clinical manifestations, and treatment. Includes special chapters devoted to the individual classes of chemotherapies that relate to kidney disease for quick reference. Discusses increasingly complex problems due to more numerous and specialized anti-cancer drugs, as well as increased survival rates for both cancer and renal failure requiring long-term patient care. Covers anti-VEGF (antivascular endothelial growth factor) agents and cancer immunotherapies - treatments that are being recognized for adverse kidney effects. Utilizes a clear, logical format based on the ASN Core Curriculum for Onco-Nephrology, making this reference an excellent tool for board review, as well as a practical resource in daily practice. The prevalence of urinary tract diseases and disorders in small animal practice is higher than ever. The 2nd edition of Canine and Feline Nephrology and Urology makes it easy to find the information you need to accurately diagnose and manage diseases and disorders of the urinary tract in dogs and cats. Its concise outline format features practical clinical content, line drawings that clearly illustrate the initiation and progression of disease, photographs that demonstrate the clinical appearance of various lesions, and tables and boxes that offer essential information at a glance. Expert authors Dennis J. Chew, Stephen P. DiBartola, and Patricia Schenck keep you current with revised and brand-new content based upon the latest studies and evidence-based medicine, helping you prevent and most effectively manage kidney, bladder, and related conditions. Outline format with concise, clinically focused content helps you quickly and easily find the information

you need to accurately diagnose and effectively manage urinary tract diseases and disorders. Practical clinical tips and guidelines including algorithms, FAQs, and case management recommendations. Special boxes highlight key information at a glance. Concise, need-to-know information about renal and lower urinary tract pathophysiology provides essential background for clinical application. Evidence-based coverage of hot topics such as the relationship between behavioral stressors and urinary tract disease, treatments for idiopathic cystitis, and dietary modifications for the prevention and treatment of urinary tract problems helps you provide the latest and best care for your patients. Chapter 1 focuses on professional issues in nephrology nursing and is a new addition to the Core Curriculum. The first chapter places emphasis on nursing leadership and management. All nephrology nurses are managers and leaders, whether or not they maintain a management position. All will face ethical dilemmas; all will be involved in providing a safe clinical environment; all will take part in assessing quality care; and all are expected to perform as a professional with an understanding of what that entails. Chapter 2 concentrates on research and evidence-based practice and what it means to nephrology nurses. It offers information on sites where valuable statistics and further information can be obtained. Chapter 3 explains the political process and the importance for all of us to get involved. It is not as difficult as one might think. Chapter 4 motivates the reader to prepare for emergencies. As too many of us know, emergencies and disasters do happen, and having plans in place prior to the event can help lessen the residual impact. As can be easily seen, Module 2 contains assorted material to assist the nurse in understanding kidney disease, the patient with kidney disease, and interrelated topics. Chapter 1 begins with an in-depth review of genetics and genomics, since many experienced nurses learned relatively little about the topic when in school. The completion of the Human Genome Project catapulted genetic research that is already transforming health care and has great potential to continue this transformation. It certainly includes nephrology care and requires that nephrology nurses be knowledgeable about the matter. The chapter also covers anatomy, physiology, and pathophysiology. Chapter 2 focuses specifically on chronic kidney disease and delivers a more detailed approach than the material presented in the previous chapter. Chapter 3 provides a wide array of material to be considered when caring for an individual patient. One of the new areas includes focus on the veteran. Chapter 4 concentrates on nutrition, and Chapter 5

addresses pharmacology. It behooves every nurse to always stay abreast of changes regarding medications, as this is one area that can change rapidly. At all times, be familiar with the package insert and consult with a pharmacist or other reliable source as needed. The foundation of Chapter 6 is infection control practices and is another area where information can change rapidly. Information from the Centers for Disease Control and Prevention (CDC) was used extensively as a resource. *Interventional Nephrology: Principles and Practice* describes a very direct approach to clinical problems encountered by the community of care providers who treat chronic kidney disease and dialysis patients. Practical scenarios faced on a day-to-day basis are presented by experts in the field utilizing the latest scientific information. In addition to internal medicine residents, nephrology fellows and practitioners, this comprehensive and useful resource is a must-have for the allied health professionals taking care of patients with hemodialysis and peritoneal dialysis access problems. Nephrology nurses take care of patients with kidney disease across the lifespan. It is possible that the patient is still in the womb or could be quite elderly. This module covers topics that are pertinent to both ends of the lifecycle. In Chapter 1, the pediatric chapter, the reader will find useful information on young patients with chronic kidney disease (CKD), complications of CKD in the young, acute kidney injury, treatments with kidney replacement therapies, and the special nutritional and pharmacological needs of the youthful patient. Helping adolescent patients transition to adult care is also addressed. Chapter 2 focuses on the care of the older adult with kidney disease. The aging process and the care of the older patient with kidney disease are addressed. This is a patient population whose numbers are on the rise. Unless nurses work strictly with pediatric patients, they will be delivering care to elderly patients. The special considerations in caring for this patient population must be taken into account. The present

volume is a reprint of a series of the lectures, first published in a special section of 'Nephron'. It covers such diverse aspects of clinical nephrology as the cardiovascular system, transplantation, immunosuppression and dialysis, providing a most interesting overview of recent highlights in the field. Extending from the outpatient management of cardiovascular and kidney disease, to hospital-based decision making in patients with cardio-renal disease and complex interfaces such as hemodialysis in patients with ventricular assist device support, this book serves as a single reference point for cardiology and nephrology clinicians and researchers dealing with the significant overlap areas between these two specialties. Chapters cover the physiology, biomarkers, therapeutic agents and full spectrum of these comorbidities and feature separate sections on cardiovascular and CKD evaluations, stratification of kidney transplant patients, lipid management in CKD, interventional strategies and hypertension. Leaders in cardiology, nephrology, hypertension and lipidology bring together the latest evidence with their collective clinical experience into this invaluable resource. This textbook is an essential resource for physicians and allied professionals practicing cardiology, nephrology, students and physician trainees, to deepen their understanding of this crucial field. A practical, up-to-date guide to the diagnosis, understanding, and treatment of kidney problems and hypertension in adult patients "In contrast to many other books in this area, this one provides a concise yet comprehensive review of each topic without getting lost in too much detail..." - Doody's Review Service (review of previous edition) Presented in the consistent, easy-to-follow CURRENT format, CURRENT Diagnosis & Treatment Nephrology & Hypertension, Second Edition delivers incisive, ready-to-use management protocols and valuable therapeutic guidelines from authors who are recognized as the field's foremost authorities. The mission of the American Society of Diagnostic and Interventional

Nephrology (ASDIN) is to promote the proper application of new and existing procedures to improve the care of patients with kidney disease. The Society promotes education, research, public policy and clinical practice initiatives relating to diagnostic and interventional procedures. In an educational program a complete and up-to-date Curriculum is essential. The Residents, Fellows and Practicing Nephrologists rely on their mentors to train them in procedures necessary to provide successful dialysis access. However, since there are several ways to accomplish any goal, the trainees also need a Curriculum which summarizes literature to provide evidence regarding advantages and disadvantages of each technique. This Core Curriculum provides this summary for peritoneal dialysis catheter procedures, which are the sine qua non of a successful dialysis program. The Curriculum represents a collaborative effort from Interventional Nephrologists in a wide variety of practices, from Universities to Private Hospitals to Access Centers. Each author is a recognized expert in the particular procedure or technique that they present. In the Introduction, Dr. Salman and Dr. Asif describe how a successful peritoneal access program directly leads to a larger PD program. Drs. Ash and Agarwal summarize various catheter designs and data indicating relative success of each. They also provide an overview of placement techniques (surgical, laparoscopic, peritoneoscopic, fluoroscopic). They define criteria for normal function and malfunction of PD catheters. Dr. Henry describes the surgical (dissective) technique of catheter placement, which entails dissection of the layers of the anterior abdominal wall. Dr. Zibari provides a detailed description of the laparoscopic technique while Dr. Abreo and colleagues describe the fluoroscopic/dilator/splitsheath approach to PD catheter placement. Dr. Mishler describes the single-puncture peritoneoscopic procedure. Dr. Salman and Dr. Asif focus on complications associated with catheter insertion and describe the PD catheter removal technique. Finally, Dr. Schon and Dr. Wang

provide define the proper CPT codes to be used for all PD catheter procedures. This Curriculum should be invaluable to all healthcare professionals performing peritoneal dialysis catheter procedures. The book focuses on pharmacological and non-pharmacological approaches of psychiatric syndromes that commonly occur in patients with kidney disease. It specifically reviews principles of psychotherapy and psychopharmacology with an emphasis on organ impairment and drug-drug interactions specific to nephrology. This book also covers issues with medication nonadherence in patients with chronic kidney disease and psychiatric comorbidity, as well as the associated issues in dialysis and renal transplantation. Additionally, chapters cover various other topics addressing an active stance towards health promotion in chronically ill patients, including the critical role of the diet and physical activity. Such advice is often complex and changing depending on the stage of chronic kidney disease and the individual needs of the patient. Written by specialists in the field, Psychonephrology: A Guide to Principles and Practice serves as a valuable reference and teaching tool that provides an opportunity for learning across a rapidly evolving medical field. The 7th edition of the Core Curriculum for Nephrology Nursing is a comprehensive, peer-reviewed resource that sets the standard for nephrology nursing clinical practice. The latest edition contains new information not published in previous editions of the Core. Features include new content to reflect current policy and terminology; impacts the everyday practice of nephrology nurses and APRNs, from novice to expert; contains more than 1,400 pages divided into two hardcover volumes written by health care professionals in nephrology nursing, nutrition, social work, pharmacology, and more; encompasses the individual's lifespan, from pediatric to older adult patient populations; provides nursing continuing professional development contact hours (CNS); and offers self-assessment questions, including answer keys and page references.
