This field guide has been created in order to foster an inner-reliance between senior management, middle management, functional teams, and the individual. Users of the field guide will find within it practical tools, tips, and techniques useful for not only implementing a QMS but also for maintaining one. What separates this field guide from most other books on AS9100 and its implementation are the flow charts showing the steps to be taken in implementing a QMS to meet a sub-clause's requirements. You need to turn out aerospace conforming parts on time, every time, and at a competitive cost, as that's exactly what the companies that can compete now and in the future will do. A Practical Field Guide for AS9100 will help to get you there. The European Standard EN 9100 is the industry-specific norm of the aerospace and defence industry. For cooperation with an aerospace company, certification according to this standard is usually mandatory for suppliers. This book provides support in understanding and implementing the standard or when switching from ISO 9001:2015 to EN 9100:2018. After an introduction to the ISO 9001, the emphasis is placed on the core characteristics of EN 9100 and EN 9120. The book focuses primarily on the explanation and translation of the standards' text into the language of everyday business. The structure of the book strictly follows that of EN 9100:2018. Numerous practical examples facilitate the understanding and implementation in your own company. Where appropriate, special characteristics of the distributor standard EN 9120 are also discussed. Finally, the author describes the certification process in great detail. This includes the preparation, the selection of a certification auditor and a certification body as well as the execution of the audit including process measurements, the handling of nonconformities and the issuing of the certificate. Due to the high degree of congruence between the standards of the EN 9100 series, this book is also suitable as a guideline for the EN 9110 for maintenance organisations and the EN 9120 for distributors. The target group This textbook is aimed at employees working in the quality department of suppliers in the aerospace industry. AS9100, AS9110, and AS9120, the quality management system (QMS) standards for the aerospace industry, are written in the most ambiguous language possible. Indeed, they don't outline how they should be implemented. Those decisions are left to the organization implementing their requirements or, in some cases, to a consultant. Although some consultant firms for aerospace systems are excellent,

there are many that purport to be experts yet proffer systems and processes that are either in contravention to the standards' requirements or so unwieldy that they render the process impotent. In an effort to simplify these issues, this book proposes practices that have been described as opportunities for improvement or best practices by registration auditors in the past. It includes a discussion of each of the three standards' clauses, suggests best practices to comply with them, outlines common findings associated with them, and provides an overview of the changes to AS9100C from AS9100B.

Learn how to implement metrics-centric monitoring with Prometheus. This introductory book teaches you how to use Prometheus to monitor hosts, applications, and services. We cover installation, basic monitoring, service discovery, alerting, log monitoring, scaling, and visualization. Includes introducing you to monitoring basics, methodologies and approaches. Learn how to monitor in a metric-centric world including building dynamic thresholds, basic anomaly detection, monitoring aggregation, and federation. We'll look at how to apply modern patterns like Google's Four Golden Signals, the USE method, and the RED method. We cover monitoring Kubernetes, Docker containers, databases, and we look at instrumenting applications and integrating logging. We focus on the particular challenges of monitoring highly dynamic, transitory environments and new architectures like microservices. We focus on monitoring in the Cloud, including looking at service discovery and monitoring for Cloud platforms. Over 70 (350+ Mbs) U.S. Army Repair, Maintenance and Part Technical Manuals
