Advancing Assessment for Student Success Jul 31 2021 This book is about student success and how to support and improve it. It takes as its point of departure that we--as faculty, assessment directors, student affairs professionals, and staff--reflect together in a purposeful and informed way about how our teaching, curricula, the co-curriculum, and assessment work in concert to support and improve student learning and success. It also requires that we do so in collaboration with our colleagues and our students for the rich insights that we gain from them. Conversational in style, this book offers a wide variety of illustrations of how your peers are putting assessment into practice in ways that are meaningful to them and their institutions, and that lead to improved student learning. The authors provide rich guidance for activities ranging from everyday classroom teaching and assessment to using assessment to improve programs and entire institutions. The authors envisage individual faculty at four-year institutions and community colleges as their main audience, whether those faculty are focused on their own classes or support their colleagues through leadership roles in assessment. If you plan to remain focused on your own courses and students, you will find that those sections of this book will help you better understand why and how assessment leaders do what they do, which in turn will make your participation in assessment more engaging and increase your expertise in facilitating student learning. Because the authors also aim to strengthen connections between the curriculum and co-curriculum and include examples of co-curricular assessment, student affairs professionals and staff interested in doing the same will also find ideas in this book relevant to their work. Opening with a chapter on equity in assessment practice, so critical to learning from and benefitting our diverse students, the authors guide you through the development and use of learning outcomes, the design of assignments with attention to clear prompts and rubrics, and the achievement of alignment and coherence in pedagogy, curriculum, and assessment to better support student engagement, achievement and success. The chapter on using student evidence for improvement offers support, resources, and recommendations for doing so, and demonstrates

exciting uses of student wisdom. The book concludes by emphasizing the importance of reflection in assessment practices--offering powerful examples and strategies for professional development--and by describing appropriate, creative, and effective approaches for communicating assessment information with attention to purpose and audience.

Automatic Generation of Learning Assignments for Software Engineering Formalisms

Apr 08 2022 Abstract: Creating learning or examination assignments is a re-occurring activity in the context of teaching. In particular new examination assignments are often desired for each season of teaching a course. In our teaching, we have observed that our creation of assignments for software engineering formalisms uses certain intuitive constraints to obtain assignments at a designated level of difficulty and, e.g., with particular properties to be analysed in the assignment. In this work, we present an approach where we formalise our (formerly intuitive) constraints and use constraint solving tools to automatically synthesise learning assignments that satisfy these constraints. In our approach we leverage the fact that our software engineering course teaches the majority of software description languages fully formal. That is, an artefact using such a software description language is then a mathematical object for which we can give precise constraints. We demonstrate our approach on the example of learning and examination assignments for the notion of determinism on decision table and discuss applications of our assignments synthesis procedure

[Assignments as Controversies](#) Jan 25 2021 Approaching academic assignments as practical controversies, this book offers a novel approach to the study of digital literacy. Through in-depth accounts of assignment writing in college classrooms, Bhatt examines ways of understanding how students engage with digital media in curricular activities and how these give rise to new practices of information management and knowledge creation. He further considers what these new practices portend for a stronger theory of digital literacy in an age of informational abundance and ubiquitous connectivity. Looking also at how institutional digital learning policies and strategies are

applied in classrooms, and how students may embrace or avoid imposed technologies, this book offers an in-depth study of learner practices. It is through the comprehensive study of such practices that we can better understand the efficacy of technological investments in education, and the dynamic nature of digital literacy on the part of students charged with using those technologies.

The Learner-Centered Instructional Designer Mar 27 2021 “What does a new instructional designer need to know to find her or his feet when working with faculty to create online classes?” This is a practical handbook for established and aspiring instructional designers in higher education, readers who may also be identified by such professional titles as educational developer, instructional technologist, or online learning specialist. Jerod Quinn, together with a team of experienced instructional designers who have worked extensively with a wide range of faculty on a multiplicity of online courses across all types of institutions, offer key guiding principles, insights and advice on how to develop productive and collegial partnerships with faculty to deliver courses that engage students and promote enduring learning. Designing and developing online classes for higher education takes a combination of pedagogical knowledge, the ability to build trust with faculty, familiarity with frameworks on how people learn, understanding of accessibility and inclusion, and technical skills to leverage a learning management system into an educational experience. Coming from diverse backgrounds, few instructional designers enter academia well versed in all of these aspects of creating online classes. This book provides the foundation on which instructional designers can build their careers. The guiding principle that animates this book is that the student experience and successful learning outcomes are paramount, and governs discussion of course design, pedagogy, the use of multimedia and technological advances, as well as the use of different forms of interactive exercises and group assignments. The succinct, informally written chapters offer ideas and means to apply theory to the daily work of instructional design and cover the four key components that drive this work in higher education:

- Defining the scope and main design approaches of our work
- Building trust with the faculty we work with
- Applying frameworks of how people learn
- Mastering common online instructional practices.

Effectiveness of Time Investments in Education Oct 14 2022 This book analyzes the productivity and effectiveness of a variety of time investments in education. It explores the methods used in education to optimize the time that students are exposed to learning content. Such methods include expanding official school time, optimizing “time on task”, providing homework assignments, and creating learning opportunities beyond lesson hours. The book presents a review of earlier reviews and meta-analyses, secondary analyses of international data sets, and new meta-analyses concerning the effects of instruction time, homework and extended learning, beyond official school time. It explores the concept of time as a condition to enhance student achievement and discusses methodological issues in separating “genuine” time effects from related facets of educational quality. The book shows that the dependence of time effects on the quality of content choice and delivery raises critical questions for both researchers and policy planners. It further shows that sophisticated research designs are required to properly assess time effects, and that policy makers should be concerned about the bluntness of time as an instrument to enhance educational productivity.

Creating Significant Learning Experiences Jan 05 2022 Dee Fink poses a fundamental question for all teachers: "How can I create courses that will provide significant learning experiences for my students?" In the process of addressing this question, he urges teachers to shift from a content-centered approach to a learning-centered approach that asks "What kinds of learning will be significant for students, and how can I create a course that will result in that kind of learning?" Fink provides several conceptual and procedural tools that will be invaluable for all teachers when designing instruction. He takes important existing ideas in the literature on college teaching (active learning, educative assessment), adds some new ideas (a taxonomy of significant learning, the concept of a teaching strategy), and shows how to systematically combine these in a way that results in powerful learning experiences for students. Acquiring a deeper understanding of the design process will empower teachers to creatively design courses for significant learning in a variety of situations.

Team-Based Learning May 29 2021 This book describes team-based learning (TBL), an unusually powerful and versatile teaching strategy that enables teachers to take small group learning to a whole new level of effectiveness. It is the only pedagogical use of small groups that is based on a recognition of the critical difference between "groups" and "teams", and intentionally employs specific procedures to transform newly-formed groups into high performance learning teams. This book is a complete guide to implementing TBL in a way that will promote the deep learning all teachers strive for. This is a teaching strategy that promotes critical thinking, collaboration, mastery of discipline knowledge, and the ability to apply it. Part I covers the basics, beginning with an analysis of the relative merits and limitations of small groups and teams. It then sets out the processes, with much practical advice, for transforming small groups into cohesive teams, for creating effective assignments and thinking through the implications of team-based learning. In Part II teachers from disciplines as varied as accounting, biology, business, ecology, chemistry, health education and law describe their use of team-based learning. They also demonstrate how this teaching strategy can be applied equally effectively in environments such as large classes, mixed traditional and on-line classes, and with highly diverse student populations. Part III offers a synopsis of the major lessons to be learned from the experiences of the teachers who have used TBL, as described in Part II. For teachers contemplating the use of TBL, this section provides answers to key questions, e.g., whether to use team-based learning,

what it takes to make it work effectively, and what benefits one can expect from it-for the teacher as well as for the learners. The appendices answer frequently asked questions, include useful forms and exercises, and offer advice on peer evaluations and grading. A related Web site that allows readers to “continue the conversation,” view video material, access indexed descriptions of applications in various disciplines and post questions further enriches the book. The editors’ claim that team-based instruction can transform the quality of student learning is fully supported by the empirical evidence and examples they present. An important book for all teachers in higher education.

Assignments Matter Feb 06 2022 What exactly is an "assignment," and why does it matter? How can educators ensure that their teaching meets the rigorous demands of the Common Core State Standards, so that all students are well prepared for college or careers? Drawing from her extensive experience as a teacher coach, author Eleanor Dougherty answers these questions and many more, with two aims in mind: (1) to guide teachers and administrators in crafting high-quality assignments, and (2) to help educators understand the powerful impact that assignments can have on teaching and learning. The book explains the critical differences among "assignments," "activities," and "assessments" and thoroughly describes the key elements of an assignment: prompts, rubrics, products, and instructional plans. Readers will learn how to * Follow a seven-step process for crafting effective assignments; * Link assignments to units and courses; * Devise "Anchor" assignments for collaboration and consistency across grades; * Tap into instructional "touchstones" that can enrich any assignment; * Create classroom and school environments that support assignment-making; and * Use assignments as a source of data about teaching and learning. Equipped with the knowledge and expertise gained from *Assignments Matter*, readers will be able to create meaningful learning experiences for their students and come to appreciate the author's belief that "assignments may well be the missing link in school reform efforts to improve student achievement."

Developmental Assignments Apr 20 2023 This book is modeled after "Eighty-Eight Assignments for Development in Place," one of the Center for Creative Leadership's most popular publications. In the years since that report was published, we have learned more about development in place--from research, from working with managers and organizations that are making use of developmental assignments, and from our colleagues in the field. We believe it is time once again to consolidate our knowledge into one tool to help leaders add developmental assignments to their own jobs and help others do the same. The tables inside this book are full of assignments. You'll also find cross-references to CCL's assessment tools: 360 by Design, Executive Dimensions, Benchmarks, Prospector, and Skillscope. If you want to target the development of specific competencies as a result of receiving feedback from any of these, the cross-references will direct you to appropriate assignments.
