These changes have affected the raw material suppliers as well as those moulding the finished product. Changes in the demands of the aerospace, defence and allied industries have largely been the cause. That situation has been particularly true for those manufacturing and distributing reinforcement fibres and fabrics, necessitating this comprehensive Sixth Edition revision. However publication is also timely, because a major and important consequence is the better consideration now being given by the 'commercial' market sector, to the use - and advantages - of some of the carbon, aramid and other high-performance reinforcements, described within these pages. Although supplying at a much lower finished component cost than applies for the aerospace and defence markets, the total tonnage output answering the typically lower-performance requirements of the 'commercial' sector, is higher by many factors. Overall therefore, the summation of output tonnage and price, will continue to favour the latter. Nevertheless this 'commercial' market sector must, albeit slowly, ultimately benefit to a marked degree from an increasing technology spin-off, promoted to an extent somewhat earlier than might otherwise have been expected, by the noted changes in market place demand. This book provides detailed information on the methods and techniques that can be used to process coir, cocopeat and other coconut byproducts for developing various bioproducts. Coir is a unique raw material in that it is abundant, green, and sustainable. The most common industrial application of coir is to use it as a reinforcement of composites with other natural or synthetic fibers and resins. Coir-based composites are used in automotive, construction, and packaging, among other applications. Recently cocopeat, coconut shells and other byproducts have been used for energy, environmental remediation and agricultural applications. This is the first reference describing the properties, processability, and applications of all the coconut byproducts. Properties of the products developed are also covered with a major focus on industrial applications. Provides a single, comprehensive reference source on the biorenewable material coir and other coconut byproducts Addresses properties, processing and a broad range of industrial applications Enables researchers spanning the materials, polymer, agricultural, composites and environmental areas to identify unique and useful applications of coir and other coconut byproducts Latest NEET Question Paper 2022- Fully solved Chapter-wise & Topic-wise
