"Collection of incunabula and early medical prints in the library of the Surgeon-general's office, U.S. Army": Ser. 3, v. 10, p. 1415-1436. A collection of miscellaneous international publications related to maternal and child welfare collected by Richard Bolt, the founder of the University of California, Berkeley, School of Public Health. Volumes are collated alphabetically by country of origin of each publication. A Polyglot Pocket Dictionary of Lingala, English, French and Italian represents a glossary that allows the reader to appreciate positive diversity and interculturalism through multilingualism. Building on, and referring to, the author's experiences of studying and living abroad as a series of transits, transitions, and translations, it urges the reader to enhance their global competency and brain power, and to seek cosmocitizenship through the study of world languages and cultures. To this end, it shares enlightening reflections on the benefits of multilingualism, and allows the reader to develop basic language skills in Lingala, English, French, and Italian. As such, in addition to the glossary, this work also contains key facts about the languages at hand, as well as useful phrases, weekdays, numbers, and elements of grammar. CONTENTS: v. 1-3: Documenti e monografie per is storia di terra di Bari. "365 pensieri di Karol Woytila dati in dono ai giovani" Italia: Civiltà e Cultura offers a comprehensive description of historical and cultural development on the Italian peninsula. This project was developed to provide students and professors with a flexible and easy-to-read reference book about Italian civilization and cultural studies, also appropriate for cinema and Italian literature classes. This text is intended for students pursuing a minor or a major in Italian studies and serves as an important learning tool with its all-inclusive vision of Italy. Each chapter includes thematic itineraries to promote active class discussion and textual comprehension check-questions to guide students through the reading and understanding of the subject matter. This collection is to present the earliest textbooks that grew out of the original development of automatic control, and the many others that followed very soon, in various countries, and in various languages. We set out to collect information on one to four books from each country, including a brief description of the background, history and contents of the book, a picture of the front page, and copies of one to a few "typical" pages. With the latter, we intended to show pages that contain an equation or figure, easily recognizable to anyone familiar with control, embedded in the text written in one of the many languages and, in some cases, in various scripts. The present collection contains 62 entries from 21 countries. There has been great progress in ureteral surgery in the last twenty years. The predominant indication is still calculous obstruction but reparative and plastic surgery of the ureter for congenital and acquired lesions are among the most interesting advances in modern urology. The essential goal of this surgery is to ensure free flow of the urine from the kidney to the bladder and so to preserve or improve kidney function which is always affected or threatened by any defect in the excretory pathway. The ideal is to re-establish a closed circuit flow from kidney to bladder by repair or substitution of the ureteral conduit so as to avoid as far as possible the disabilities that result from diversion of the urine to the skin surface or to the intestine. This objective can now be achieved in the treatment of most of the diseases of the ureter when the relevant kidney is sufficiently healthy to merit conservation. The techniques used are not necessarily new but the advent of antibiotics has made it possible to avoid or reduce the risks of infection, pyelonephritis, or pyonephrosis that so often complicated such surgery in earlier times. Progress in the investigation of renal function and of the excretory tract has brought a better understanding of the physio-pathology of the urinary apparatus and more accurate judgement of the results of reparative surgery. "This title focuses on an Italian architect and engraver of the 18th century - Piranesi. In this book it is argued that Piranesi grants a metaphorical meaning to the Carcesi - a set of etchings - in order to imprison those he saw as obstructing the arts and threatening his own freedom. In light of the growing academic interest in Italy and the re-organization of many university courses in Italian, this series aims to bring together different scholarly perspectives on Italy and its culture."
