Benchmarking in Food and Farming Jul 27 2021 At a time when food producers have to make significant changes to their businesses in order to survive, a review of benchmarking in agriculture and discussion of its future potential is critical. This book meets that need by providing an overview of existing benchmarking practices in agriculture and the food supply chain, and evaluating the potential of these practices to drive sustainable innovation in food and farming. Increasing pressures from commodity markets, corporate buyers, government and rising input prices (particularly fuel prices) are creating an environment in which farmers and their advisors are keen to make greater use of performance information for survival and growth. Where farmers are diversifying into alternative production methods, non-agricultural enterprises and on-farm production and sales, the greater the interest in a wider range of accounting tools for decision making. Lisa Jack and her contributors draw on a wide range of data and sources from Australia, New Zealand, the USA, the UK and Europe to provide critical evaluations of what might be considered 'state of the art' benchmarking practices at this time, including recent strategic developments such as the use of non-financial measures in balanced scorecards. The food and farming industry is unusual in that benchmarking takes place among large numbers of small, family-owned businesses working in a global industry. Not only, therefore, is this book important for those working in food supply chain businesses, but also for those involved in the general practice of benchmarking.

Military Organizations for Homeland Defense and Smaller-Scale Contingencies Apr 23 2021 History has often confirmed that it is not superior weapons but superior organizations that are the most effective factor in achieving military success. In light of this consideration, Kevin D. Stringer's new work proposes how the U.S. military can best be restructured to conduct military operations other than war (as they are known in doctrinal terms).. Such reform is central to meeting the demands of homeland defense and smaller-scale contingencies, including nation-building and stability operations. Foreign military formations present models for peace operations, irregular warfare, and other missions, as well as counterterrorism, law enforcement, and border control. The models considered — drawn from tactical units in Britain, Denmark, Germany, Israel, Norway, Rhodesia, Russia, and Switzerland — are selected as best practice examples for transforming the U.S. Armed Forces for future missions both at home and abroad. The author describes the categories of military operations other than war in the context of force structure requirements for homeland defense and irregular warfare. Each chapter aligns foreign tactical organizations with these military operations to identify appropriate formations to enhance the U.S. Army. This issue of future organizational structure is crucial to the debate over the Quadrennial Defense Review, the Pentagon report to Congress on emerging threats, and the future role of the National Guard. Changes in existing force structure will have significant implications for the conduct of stabilization operations in Iraq and Afghanistan as well as responses by the active and Reserve components to domestic emergencies.

Validating a Best Practice Apr 16 2023 Sharing Best Practices across industries and functions is an accepted approach to continuous improvement. The Benchmarking trend of the 1990s has evolved with the help of competitive analysis, performance excellence awards, and other corporate recognition programs into an ongoing documentation of what works. Bob Camp introduced benchmarking against a Best Practice based on his work at Xerox in the 1980s. Case studies abound documenting Best Practice functions and processes. Some case studies use the words "Best Practice" without evidence that the process, results, or methods are, indeed, superior. What is missing is a comprehensive model for assessing and writing a Best Practice that provides sufficient

information to use as an effective benchmark. This book provides that comprehensive model. Today's consumers expect products and services to be of high quality, reliable, and user-friendly. This is the result of years of continuous improvement and innovation by producers. Although many organizations strive for excellent results, there is still room for improvement. Unfortunately, leaders don't always have methods and tools to measure or assess that degree of excellence. If leaders could use a tool to discover how good their approaches and methods are, and how excellent their achieved results are, they could plan further improvements. The goal is to achieve excellent results. The tool described in this book guides leaders to achieve that excellence.

Evaluating Information Systems Oct 30 2021 The adoption of Information Technology (IT) and Information Systems (IS) represents significant financial investments, with alternative perspectives to the evaluation domain coming from both the public and private sectors. As a result of increasing IT/IS budgets and their growing significance within the development of an organizational infrastructure, the evaluation and performance measurement of new technology remains a perennial issue for management. This book offers a refreshing and updated insight into the social fabric and technical dimensions of IT/IS evaluation together with insights into approaches used to measure the impact of information systems on its stakeholders. In doing so, it describes the portfolio of appraisal techniques that support the justification of IT/IS investments. *Evaluating Information Systems* explores the concept of evaluation as an evolutionary and dynamic process that takes into account the ability of enterprise technologies to integrate information systems within and between organisations. In particular, when set against a backdrop of organisational learning. It examines the changing portfolio of benefits, costs and risks associated with the adoption and diffusion of technology in today's global marketplace. Finally approaches to impact assessment through performance management and benchmarking is discussed.

Sustainable Retrofitting of Commercial Buildings Jan 21 2021 Despite recent improvements in energy efficiency being made in new build, it is important that the existing commercial building sector also take action to meet emission reduction targets. The objectives and challenges of such action will reduce the risk of the sector becoming obsolete due to high energy use and poor environmental performance. This book presents a theory-based, practice-support methodology to deal with sustainable retrofitting opportunities for existing commercial buildings in warm climates using bioclimatic design as the basis. The book has four main parts, focusing on eco-design and renovation, bioclimatic retrofitting, technological and behavioural change and case studies of retrofitting exemplars. In the first part, the context of climate change effects on design and renovation at the city scale is discussed. The second part looks at bioclimatic retrofitting as a 'design guide' for existing buildings, highlighting the significance of architectural design and engineering systems for energy performance. The technological and behavioural contexts of the existing building sector - policies, modelling, monitoring and trend analysis in respect to energy and environmental performance - are covered in part three. The final part gives some case studies showing the effectiveness of strategies suggested for effective environmental performance. This book is a must-have guide for all involved in the design and engineering of retrofitting projects in warm climates.

For anyone grappling with the elements required to change an organization's supply chain strategy in a 'green' direction, this book is a must read. "Having worked with Stuart Emmett on other ground breaking books, I can empathically say that this book written with Vivek Sood is another one in the same mould. This enjoyable book not only covers a topic that is critically relevant for every individual, but also provides a practical road map for a green supply chain strategy. Strongly recommended, it is a book of it time." —Barry Crocker, Author and MSC Program Leader, University of Salford "After co-creating the supply chain management methodology in 1979, I have remained at the forefront of this field for the last 30 years by continually pushing the boundaries of thoughts and applications in Supply Chain Management. But, during all this time, nothing has excited me as much as our current endeavor on Green Supply Chains. It is the need of the moment, resonating in all directions. What is more important, it makes perfect commercial sense. This book by Vivek Sood and Stuart Emmett is a big step in furthering that discussion. It should be on the bookshelf of every progressive manager." —Dr Wolfgang Partsch, Global Supply Chain Group, Munich, Germany "...As supply chains have become more visible to people around the world, and at the same time more global, questions about their impact on the environment and global sustainability have increased. People who care about our Planet often wonder what are the adverse impacts of transporting goods thousands of miles...goods that are often produced in manufacturing plants that are not environmentally friendly...and then packaged in what becomes waste. So, companies and governments worldwide have begun to address the questions. The authors have addressed the questions in an insightful manner. They have analyzed the supply chain processes, presented new ideas, and have backed these up with solid case examples from leading companies. The book is a must read for anyone who manages a supply chain, cares about the environment, and seeks actionable ideas for 'going green'." —Gene Tyndall, Executive Vice President, Global Tompkins International "This book treats the 'Next Generation' Supply Chain in a phenomenal way. It is an emerging topic, a paradigm shifting approach for companies on their radical cost saving waves, and an absolutely necessary component of the sustainability for our Planet." —Ahmet Yalçın Managing Partner at Stars of Europe and Chairman of the Board of the German Solar Energy company Green Enesys Group

Root Cause Analysis and Improvement in the Healthcare Sector Dec 12 2022 Healthcare organizations and professionals have long needed a straightforward workbook to facilitate the process of root cause analysis (RCA). While other industries employ the RCA tools liberally and train facilitators thoroughly, healthcare has lagged in establishing and resourcing a quality culture. Presently, a growing number of third-party stakeholders are holding access to accreditation and reimbursement pending demonstration of a full response to events outside of expected practice. An increasing number of exceptions to healthcare practice have precipitated a strong response advocating the use of proven quality tools in the industry. In addition, the industry has now expanded its scope beyond the hospital walls to many ancillary healthcare facilities with little experience in implementing quality tools. This book responds to the demand for a RCA workbook written specifically for healthcare, yet still broad in its definition of the industry. This book contains everything that the typical RCA leader in healthcare requires: A text specific to healthcare, but using the broadest definition of the industry to include not only acute care hospitals, but rehabilitation facilities, long-term care facilities, outpatient surgery centers, ambulatory services, and general office practices. A workbook-style format that walks through the process, step-by-step. Straightforward text without "sidebars," "tables," and "tips." Worksheets are provided at the end of the book to reduce reader distraction within the text. A wide range of real-world examples. Format for use by the most naive of users and most basic of processes, as well as a separate section for more advanced users or more complex issues. Templates, both print and electronic, included for the reader's use. Ready-to-use educational materials with scripting to enable the user to train others and garner support for the use of the techniques. Background text for users in leadership to understand the tools in the larger context of healthcare improvement. Up-to-date information on the latest in the use of RCA in satisfying mandatory reporting requirements and slaying the myth that the process is onerous and fraught with barriers. Background text and tools/process are separated to facilitate the readers' specific needs. Healthcare leaders can appreciate the current context and requirements without wading through the actual techniques; end-users can begin learning the skills without wading through dense administrative text. Language and tone promoting the use of the tools for improvement of processes that have experienced exceptions, as opposed to assigning blame for errors. Attention to process ownership, training, and resourcing. And, most importantly, thorough description of the improvement process as well as the analysis.
