The deteriorating condition of federal facilities poses economic, safety, operational, and environmental risks to the federal government, to the achievement of the missions of federal agencies, and to the achievement of public policy goals. Primary factors underlying this deterioration are the age of federal facilities—about half are at least 50 years old—and decades of inadequate investment for their maintenance and repair. These issues are not new and there are no quick fixes. However, the current operating environment provides both the impetus and the opportunity to place investments in federal facilities' maintenance and repair on a new, more

sustainable course for the 21st Century. Despite the magnitude of investments, funding for the maintenance and repair of federal facilities has been inadequate for many years, and myriad projects have been deferred. Predicting Outcomes of Investments in Maintenance and Repair of Federal Facilities identifies processes and practices for transforming the current portfolio of federal facilities into one that is more economically, physically, and environmentally sustainable. This report addresses ways to predict or quantify the outcomes that can be expected from a given level of maintenance and repair investments in federal facilities or facilities' systems, and what strategies, measures, and data should be in place to determine the actual outcomes of facilities maintenance and repair investments. This is the first time ever that a comprehensive practical book has been published that deals with the maintaining and repairing of turret (tower) clocks. 'The Maintenance, Repair, Restoration, Conservation and Preservation of Turret Clocks' by Chris McKay is a unique new book that deals in a structured manner with all the aspects declared in its title. The target audience for the book is the experienced professional horologist who, from time to time, is asked to work on a turret clock. Its objective is to provide the necessary information so that the clockmaker will be able to perform maintenance and appropriate repairs, restoration

and conservation. The book will help them assess for themselves how far they can go and when they need to call in specialist assistance. All will benefit. The restorer will expand their knowledge and experience, the clock will be properly looked after and the owner will be rewarded with a reliable clock that has an attractive dial. Although aimed at the professional horologist, the book will also be useful to the collector of turret clocks who has a practical bent. Advisers to heritage bodies, Dioceses and those 'just interested' will all find something in the book for them. The whole book is very graphic with colour photographs on nearly every page. Starting with a visit to a turret clock installation, the book progresses through suggested tools to maintenance where a blow-by-blow description is given of where to apply oil. Inspection is covered plus fault-finding to cover those problems peculiar to turret clock work. Basic jobs like cleaning, bushing and polishing pivots are covered. A chapter on terminology gives a visual list of all the parts of a turret clock from weights to dial. Dismantling and re-assembly is described pointing out the need to note assembly marks. Fitting a new suspension spring, timing a clock and finding the cause of erratic performance are all covered. A section on bells describes bell ringing, bell hammers and the maintenance and repair of clock bell hammers, bell cranks and bell wires. Dials too are covered giving explanations or

removal, replacement, painting and gilding. Health and safety, commercial issues, quotations and faculties are discussed. Work practices such as working at heights, risk assessment and methodologies are introduced. Conservation is first introduced with a plea to be conservation minded. A chapter on the subject explains conservation objectives and the need for compromise since turret clocks are expected to work all the year. For the collector, a chapter gives information on making stands or finding or making pendulums, weights and dials. Quarto size, the book is self-published by the author. It runs to 226 pages and has over 400 colour illustrations. Perfect bound, the soft cover is in full colour and matte laminated.
