Office 2010 In Depth is the beyond-the-basics, beneath-the-surface guide for everyone who wants to streamline their work with Office 2010, and get more done in less time. Best selling technology expert Joe Habraken provides specific, tested, proven solutions to the problems Office users run into every day: challenges other books ignore or oversimplify. Habraken thoroughly covers all facets of

working with Office 2010's core features and techniques, and powerful new enhancements such as: " The updated customizable Ribbon and new Backstage full-screen options menu " Vastly improved image and illustration tools " Live Preview for tasks like Paste, Insert, or Theme change " Improved integration with SharePoint services, Windows Live, and Office Web Apps " And much more Simply put, no other book offers Office 2010 users this much simplicity, usable content, flexibility, and value. As with all In Depth books, Office 2010 In Depth presents comprehensive coverage, breakthrough techniques, exclusive shortcuts, quick access to information, troubleshooting help for tough problems, and real-world examples with nothing glossed over or left out. This book is both a reference and a desk-side resource, providing in depth coverage of important Office 2010 applications features and tools. By Joe Habraken, an Office expert and best selling author Covers the hottest new features in Word, Excel, PowerPoint, Outlook, Access, and Publisher For everyone who wants to get the most out of Office 2010, from hobbyists to power users to corporate developers Microsoft Access is a complete relational database management system that offers powerful tools for creating tables, queries, forms and reports. This concise guide to building databases begins with a short but practical overview of good database design--beginning with how to model the numerous tables that are required to manage the real world facts about objects, places, or events. Following the design review, you learn how to: Create tables and establish field data types, validation rules, input masks, indices and primary keys, and formatting; Establish relational joins between tables to model one-to-one, one-to-many, and many-to-many relationships; Build queries to ask specific questions of your databases, or to perform common maintenance tasks against your tables and their data; Create forms and reports that make working with relational data easy. You'll be introduced to creating simple and complex forms that allow you to work with any kind of related data. Also covered is the topic of creating powerful grouped and summary reports. This title is the first in a series on

Building components for a Microsoft Access database. The books in this series focus on a task-based approach to learning Microsoft Access and therefore differ from other books that feature a complete review of all the commands and tools available in Microsoft Access. Schiavone taught database design for large organizations for over 10 years. For introductory computer courses on Microsoft Office 2010 or courses in computer concepts with a lab component for Microsoft Office 2010 applications. Your Office is the Office Applications textbook written for instructors who

want more than a 'skill & drill' book that enables students to learn discreet tasks but fails to illustrate the big picture of how these skills work together. Your Office bridges the gap between skill and application, and empowers students to master Office 2010 as a tool to solve problems and make decisions. The cases progress students from learning the skills in each Office Application to using the applications as tools to make business decisions. The unique modular structure provides a strong foundation for students through practice in each workshop and then synthesizes the objectives covered over two workshops, challenging students to really retain what they learned as opposed to learning and then forgetting soon after. The series scenario introduces a large global business (the resort and spa) made up of smaller businesses (golf pro shop, spa, restaurants, event planning, etc) featured in the cases that run throughout all four applications. This approach gives students a solid understanding of how an organization works by exposing them to how individuals in all facets of a business interact with tools like Microsoft Office and use information to make decisions. Loved by instructors for its visual and flexible way to build computer skills, the Illustrated Series is ideal for teaching Microsoft Access 2010 to both computer rookies and hotshots. Each two-page spread focuses on a single skill, making information easy to follow and absorb. Large, full-color illustrations represent how the students' screen should look. Concise text introduces the basic principles of the lesson and integrates a case study for further application. This book is primarily intended for a training/educational environment in a college, University, or technical school. The goal is to start from point zero in Access 2010 SQL and arrive at the level of a skilled professional. To that purpose it contains 306 exercises in 31 chapters which the student can complete during class time. It also contains ten questions after each chapter which the instructor can use for in class discussions or test generation. There are 320 questions in total in the book. Finally, it contains sixty case studies, two at the end of each chapter, for additional work as homework or for sharpening the skills learned through each chapter. The book is the culmination of Pindaro's 12 years of MS Access teaching at the University level to freshmen students with all the inherited fun and challenges. After hundreds of labs and thousands of questions and comments from the students, Pindaro wrote this book to assist the students in becoming SQL experts so that they can be absolutely successful in the working environment. Currently, no matter the position, industry, or job function, it looks like everyone is asking for SQL skills. For the instructor, Pindaro tried to make this book as friendly as possible.

First, he personally tested the book in class to see how the labs work in the real training environment. Second, he has provided a multitude of case studies and questions on real business scenarios so that the students can appreciate the power of SQL for work and business. Third, he has prepared a separate booklet of 64 pages that the instructor can receive as a pdf file (upon confirmation of instructor status) that includes the solutions to the case studies and provides hints for the code proposed. The goal is to learn how to use databases for real business tasks. Pindaro has worked on hundreds of business databases and operational systems for the last 19 years.
