Expert coverage of the design and implementation of state estimation algorithms for tracking and navigation. *Estimation with Applications to Tracking and Navigation* treats the estimation of various quantities from inherently inaccurate remote observations. It explains state estimator design using a balanced combination of linear systems, probability, and statistics. The authors provide a review of the necessary background mathematical techniques and offer an overview of the basic concepts in estimation. They then provide detailed treatments of all the major issues in estimation with a focus on applying these techniques to real systems. Other features include: Problems that apply theoretical material to real-world applications; In-depth coverage of the Interacting Multiple Model (IMM) estimator; Companion DynaEst(TM) software for MATLAB(TM) implementation of Kalman filters and IMM estimators; Design guidelines for tracking filters; Suitable for graduate engineering students and engineers working in remote sensors and tracking. *Estimation with Applications to Tracking and Navigation* provides expert coverage of this important area. A textbook covering data-science and machine learning methods for modelling and control in engineering and science, with Python and MATLAB®. This approach encourages students to work through the statistics by carrying data collection and analysis projects from problem formulation through preparation of professional technical reports - just as if they were on the job."--BOOK JACKET. This greatly expanded second edition of this popular and handy reference book includes over 100 new pages, including extensive coverage of Section VIII of the ASME Pressure Vessel Code. Divided into 22 sections, this pocket-sized volume is an exhaustive "quick reference" of up-to-date engineering data and rules. It includes: essential mathematics; units; engineering design processes and principles; basic mechanical design; motion; mechanics of materials; material failure; thermodynamics; fluid mechanics; fluid equipment; vessel codes and standards; materials; machine elements; design and production tools; project engineering; computer-aided engineering; welding; non-destructive examination; corrosion; surface protection; metallurgical terms; and engineering associations and organizations.
