For Cathy, motherhood became an avenue for personal growth and awareness. She worked passionately and intentionally to develop a parenting approach which blended traditional values with empowerment and alternative methods. Motherhood became a quest to identify her true beliefs and deliberately pass them onto her children. Continually in a state of self-reflection, she asked herself: how can I ensure that my children learn to value family unity alongside independent thought? Cathy read, researched, inquired, tried, failed and tried again to discover her approach to motherhood. Cathy's ultimate goal for her children was to foster love, joy, creativity, dignity, and community. She worked tirelessly to cultivate respect for all people and recognition that all opinions have value. Within the University of Motherhood lies the story of her journey from childhood to motherhood. Cathy hopes that readers experience as much joy and inspiration reading as she had writing about her many adventures and discoveries. This book explores students' consumer practices and material desires in nineteenth-century Oxford. Consumerism surged among undergraduates in the 1830s and decreased by contrast from the 1860s as students learned to practice restraint and make wiser choices, putting a brake on past excessive consumption habits. This study concentrates on the minority of debtors, the daily lives of undergraduates, and their social and economic environment. It scrutinises the variety of goods that were on offer, paying special attention to their social and symbolic uses and meanings. Through emulation and self-display, undergraduate culture impacted the formation of male identities and spending habits. Using Oxford students as a case study, this book opens new pathways in the history of consumption and capitalism, revealing how youth consumer culture intertwined with the rise of

competition among tradesmen and university reforms in the 1850s and 1860s. Describes graduate programs in art, dance, music, and theater, and lists undergraduate programs. A fascinating tour through parts of geometry students are unlikely to see in the rest of their studies while, at the same time, anchoring their excursions to the well known parallel postulate of Euclid. The author shows how alternatives to Euclid's fifth postulate lead to interesting and different patterns and symmetries, and, in the process of examining geometric objects, the author incorporates the algebra of complex and hypercomplex numbers, some graph theory, and some topology. Interesting problems are scattered throughout the text. Nevertheless, the book merely assumes a course in Euclidean geometry at high school level. While many concepts introduced are advanced, the mathematical techniques are not. Singer's lively exposition and off-beat approach will greatly appeal both to students and mathematicians, and the contents of the book can be covered in a one-semester course, perhaps as a sequel to a Euclidean geometry course.
