Climate Change is a major threat to our way of life, and requires urgent political action to remedy its many threats, but is it a symptom rather than the disease? This book argues that the problem lies deep in our commitment to the quest for ever increasing economic growth. At some time in the 1970s the Western World passed a point of economic satiety beyond which further economic growth was of little benefit, and indeed was counter-productive, to living the good life. We must therefore seek a better understanding of our environment and of what constitutes genuine wealth. Life without the frenetic economic activity and culture of selfish possession that drives the modern economy can indeed be more humane, more pleasant and more meaningful than what we have today , but to reach it will require a major re-evaluation of what is important in business, politics and culture. The most learner-centered and assessment-driven text available With its engaging writing style and comprehensive coverage of key research, *Psychology, 4/e*, awakens students' curiosity and energizes their desire to learn more. This title draws learners into an interactive experience of psychology. The authors establish clear learning objectives tied to the most recent APA-recommended undergraduate learning guidelines. MyPsychLab is a valuable component to the Ciccarelli/White program. Engaging activities plus assessments provide a teaching and learning system that helps students master psychological concepts more readily. Concise, practical, and based on the best available research, *Essentials of Organizational Behavior: An Evidence-Based Approach, Second Edition* equips students with the necessary skills to become effective leaders and managers. Author Terri A. Scandura uses an evidence-based approach to introduce students to new models proven to enhance the well-being, motivation, and productivity of people in the work place. Experiential exercises, self-assessments, and a variety of real-world cases and examples provide students with ample opportunity to apply OB concepts and hone their critical thinking abilities. New to this Edition A new Emotions and Moods chapter delves into important topics like emotional intelligence, emotional contagion, and affective neuroscience. A new Power and Politics chapter unpacks the most effective influence strategies and helps students develop their political skills. A streamlined table of contents now combines perception and decision making in a single chapter and change and stress in a single chapter. New case studies, including some from SAGE Business Cases for the Interactive eBook, on topics such as virtual teams, equal pay and the gender wage gap, and the use of apps at work introduce timely and relevant discussions to help foster student engagement. The new edition has been rigorously updated with the latest research throughout and includes expanded coverage of Machiavellian leadership, ethical decision making, and organizational design through change. New Best Practices and Research in Action boxes as well as new Toolkit Activities and Self-Assessments have been added to make the text even more hands-on and practical. Stanley Christopherson's regiment, the Sherwood Rangers Yeomanry, went to war as amateurs and ended up one of the most experienced, highly trained and most valued armoured units in the British Army. A junior officer at the beginning of the war, Christopherson became the commanding officer of the regiment soon after the D-Day landings. What he and his regiment witnessed presents a unique overview of one of the most cataclysmic events in world history and gives an extraordinary insight, through tragedy and triumph, into what it felt like to be part of the push for victory. Simply stated, geography studies the locations of things and the explanations that underlie spatial distributions. The study guide includes additional learning objectives, a complete chapter outline, critical thinking exercises, problems and short essay work using actual figures from the text, and a self-test with answer key in the back. The new edition of this popular text has been extensively revised and updated throughout. It will continue to provide the trainee or practising anaesthetist with all the information, both background and practical, that will be needed in the busy clinical setting or during revision for qualifying examinations. Major changes for the new edition include increased international relevance, made possible by the extensive input of a new American co-editor and the selection of well known contributing authors from around the world. The content is thus applicable to all trainees studying for, and passing, the variety of different certifying examinations for practising anaesthesia in a wide range of locales. The book presents both the basic science underlying modern anesthetic practice and up-to-date clinical anesthetic management techniques in a comprehensive, but concise and accessible, style. Reviews are well referenced throughout to guide the reader towards additional information beyond the scope of this text. The book will continue to provide in a single volume all the information relevant to the physician in training, and serve as a convenient and reliable reference for the anaesthetist to use after training. Tourism is an astonishingly complex phenomenon that is becoming an ever-greater part of life in today's global world. This clear and engaging text introduces undergraduate students to this vast and diverse subject through the lens of geography, the only field with the breadth to consider all of the aspects, activities, and perspectives that constitute tourism. Indeed, geography and tourism have always been interconnected, and Velvet Nelson reinforces the relationship between them by using both human and physical geography to interpret all facets of tourism--economic, social, and environmental. She shows how geography provides the tools and concepts to consider both the positive and negative factors that affect tourists and destinations as well as the effects tourism has on both peoples and places. Her real-world case studies, based both on research and on the experiences of tourists themselves, vividly illustrate key issues. This comprehensive, thematically organized introduction will enhance students' understanding of geographic concepts and how they can be used as a way of viewing and understanding the world. *Clinical Interviewing, Fifth Edition* blends a personal and easy-to-read style with a unique emphasis on both the scientific basis and interpersonal aspects of mental health interviewing. It guides clinicians through elementary listening and counseling skills onward to more advanced, complex clinical assessment processes, such as intake interviewing, mental status examination, and suicide assessment. Fully revised, the fifth edition shines a brighter spotlight on the development of a multicultural orientation, the three principles of multicultural competency, collaborative goal-setting, the nature and process of working in crisis situations, and other key topics that will prepare you to enter your field with confidence, competence, and sensitivity. The new revised fifth edition of *Natural Hazards* remains the go-to introductory-level survey intended for university and college courses that are concerned with earth processes that have direct, and often sudden and violent, impacts on human society. The text integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology, and solar system astronomy. The textbook explains the earth processes that drive hazardous events in an understandable way, illustrates how these processes interact with our civilization, and describes how we can better adjust to their effects. Written by leading scholars in the area, the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards, disasters, and catastrophes. The text is designed for learning, with chapters broken into small consumable chunks of content for students. Each chapter opens with a list of learning objectives and ends with revision as well as high-level critical thinking questions. A Concepts in Review feature provides an innovative end-of-chapter section that breaks down the chapter content by parts: reviewing the learning objectives, summary points, important visuals, and key terms. New case studies of hazardous events have been integrated into the text, and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text. Figures, illustrations, and photos have been updated throughout. The book is designed for a course in natural hazards for nonscience majors, and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society. This book explores how being "disabled" originates in the physical world, social representations and rules, and historical power relations--the interplay of which render bodies "normal" or not. Do parking signs that represent people in wheelchairs as self-propelling influence how we view dis/ability? How do wheelchair users understand their own bodies and an environment not built for them? By asking questions like these the authors reveal how normalization has informed people's experiences of their bodies and their fight for substantive equality. Understanding these processes requires acknowledging the tension between social construction and embodiment as well as centering the intersection of dis/abilities with other identities, such as race, class, gender, sex orientation, citizen status, and so on. Scholars and researchers will find that this book provides new avenues for thinking about dis/ability. A wider audience will find it accessible and informative.
