How can you choose the best possible school? This classic guide helps students answer these vital questions and much more. It will also help graduate students finish in less time, for less money, and with less trouble. Based on interviews with career counselors, graduate students, and professors, Getting What You Came For is packed with real-life experiences. It has all the advice a student will need not only to survive but to thrive in graduate school, including: instructions on applying to school and for financial aid; how to excel on qualifying exams; how to manage academic politics—including hostile professors; and how to write and defend a top-notch thesis. Most important, it shows you how to land a job when you graduate. Researcher and author Dr. Sönke Ahrens explores the meaning of writing and discusses how to write effectively using the "slip-box system." He explains how to follow the lead of Niklas Luhmann, a prolific author and sociologist who produced 58 books in 30 years. Luhmann's slip-box, note-taking system allowed him to connect notes he'd made from his readings with other information from a variety of contexts. Whether you follow this manual's process or create a digital version, the concept remains the same. It starts with writing notes about what you read and tracking how they intersect, which makes this illuminating for students, academics, researchers, businesspeople and other writers. This book explores the many ways in which the obsession with "being smart" distorts the life of a typical college or university, and how this obsession leads to a higher education that shortchanges the majority of students, and by extension, our society's need for an educated population. The author calls on his colleagues in higher education to return the focus to the true mission of developing the potential of each student: However "smart" they are when they get to college, both the student and the college should be able to show what they learned while there. Unfortunately, colleges and universities have embraced two very narrow definitions of smartness: the course grade and especially the standardized test. A large body of research shows that it will be very difficult for colleges to fulfill their stated mission unless they substantially broaden their conception to include student qualities such as leadership, social responsibility, honesty, empathy, and citizenship. Specifically, the book grapples with issues such as the following:• Why America's 3,000-plus colleges and universities have evolved into a hierarchical pecking order, where institutions compete with each other to recruit "smart" students, and where a handful of elite institutions at the top of the pecking order enroll the "smartest" students. • Why higher education favors its smartest students to the point where the "not so smart" students get second-class treatment. • Why so many colleges find it difficult to make good on their commitment to affirmative action and "equality of opportunity." • Why college faculties tend to value being smart more than developing students' smartness (i.e., teaching and learning). Combining the best of whole language and phonics, this unique resource gives teachers in grades 4-12 a total of 44 easy-to-use lessons to teach students how to spell by recognizing spelling patterns and consistencies rather than memorizing hundreds of isolated words. Includes over 150 reproducible informal tests, word lists, and worksheets covering sounds, syllables, word building, and more. A comprehensive look at the promise and potential of online learning In our digital age, students have dramatically new learning needs and must be prepared for the idea economy of the future. In Getting Smart, well-known global education expert Tom Vander Ark examines the facets of educational innovation in the United States and abroad. Vander

Ark makes a convincing case for a blend of online and onsite learning, shares inspiring stories of schools and programs that effectively offer "personal digital learning" opportunities, and discusses what we need to do to remake our schools into "smart schools." Examines the innovation-driven world, discusses how to combine online and onsite learning, and reviews "smart tools" for learning. Investigates the lives of learning professionals, outlines the new employment bargain, examines online universities and "smart schools" Makes the case for smart capital, advocates for policies that create better learning, studies smart cultures For the frustrated parents of "Conundrum Kids", bright children whose overall academic performance does not match their intellectual capabilities. Concise and authoritative, this much-needed guide is a welcome resource for parents, and teachers. This book features the contributions presented at the 5th International KES Conference on Smart Education and e-Learning, which took place in Gold Coast, Australia, June 20–22, 2018. The peer-reviewed papers are grouped into several interconnected parts: Part 1 – Smart Education: Systems and Technology, Part 2 – Smart Pedagogy, Part 3 – Smart Education: Case Studies and Research, and Part 4: Sustainable Learning Technologies: Smart Higher Education Futures. Smart education and smart e-learning are emerging and rapidly growing areas with the potential to transform existing teaching strategies, learning environments, and educational activities and technology in the classroom. Smart education and smart e-learning focus on enabling instructors to develop new ways of achieving excellence in teaching in highly technological smart classrooms, and providing students with new opportunities to maximize their success and select the best options for their education, location and learning style, as well as the mode of content delivery. This book serves as a useful source of research data and valuable information on current research projects, best practices and case studies for faculty, scholars, Ph.D. students, administrators, and practitioners – all those who are interested in smart education and smart e-learning. Using as a framework the "theory of careers" developed by John L. Holland, the authors of this volume examine the patterns of student stability and change inherent in the college experience, as well as the variations in professional attitudes and behaviors of college faculty. Their goal is to learn more about what colleges and universities might do to facilitate the retention, satisfaction, and learning of their students. For example, why should faculties split over student-oriented teaching strategies, one group favoring the formal, structured classroom, the other a freer, more spontaneous environment? Why do some undergraduates become independent thinkers with strong analytical, mathematical, and scientific competencies while others develop powerful interpersonal and group leadership skills? Holland's theory--at its core a person-environment fit theory--assumes that there are six personality types and six analogous academic environments and that the educational persistence, satisfaction, and achievement of students are a function of the congruence or "fit" between students and their academic environments. The authors also assume that there are circumstances under which the environments of the major field exert more influence on students than do the students' own personality traits. Applying Holland's theory to distinctive clusters of academic disciplines, the authors have found that the answers to such fundamental questions as those asked above emanate from a basic understanding of the influences of academic disciplines and the manner by which they shape the patterns of thought and behavior of both college students and faculty. Academic Disciplines will benefit researchers and graduate students who study college students and faculty, as well as administrators and policymakers responsible for the performance of colleges and universities. The best teachers are the ones who can empower students to ask intelligent questions and persistently seek the answers. In this book you'll find a proven, detailed method for how to do this, by learning: A groundbreaking new approach to content delivery and instruction, geared towards maximizing student discovery, deep thought, exploration and creativity Why educators must let go of student IQ as a concept that influences teaching methods in any way How to create a protocol-driven environment that fosters deep sharing and reflection With Doing Poorly on Purpose, veteran educator James R. Delisle dispels the negative associations and stereotypes connected to underachievement. By focusing on smart kids who get poor grades—not because they're unable to do better in school but because they don't want to—Delisle presents a snapshot of underachievement that may look far different from what you envision it to be. There is no such thing as a "classic underachiever." Students (and their reasons for underachieving) are influenced by a wide range of factors, including self-image, self-concept, social-emotional relationships, and the amount of dignity teachers afford their students. Helping "smart" students achieve when they don't want to is not an easy task, but you can reengage and inspire students using Delisle's insights and practical advice on these topics: * Autonomy * Access * Advocacy * Alternatives * Aspirations * Approachable Educators Smart, underachieving students need the reassurance that they are capable, valuable, and worth listening to despite their low academic performance. If these students—who are otherwise academically capable—don't feel they are getting respect from those in charge of their learning, then the desire to conform and achieve is minimized. In a word, they want dignity. Don't we all? This book contains the contributions presented at the 3rd international KES conference on Smart Education and Smart e-Learning, which took place in Puerto de la Cruz, Tenerife, Spain, June 15-17, 2016. It contains a total of 56 peer-reviewed book chapters that are grouped into several parts: Part 1 - Smart University: Conceptual Modeling, Part 2 – Smart Education: Research and Case Studies, Part 3 – Smart e-Learning, Part 4 – Smart Education: Software and Hardware Systems, and Part 5 – Smart Technology as a Resource to Improve Education and Professional Training.
