[Soil testing methods manual](#) Jul 24 2020 The Soil Doctors programme is developed under the umbrella of the Global Soil Partnership and promotes the establishment of a farmer-to-farmer training system. The Soil Doctors Global Programme aims to build the capacity of smallholder farmers on the practice of sustainable soil management and, by doing so, support governmental agencies and organizations working on agricultural extension at the field level (promoting broader impact and a reduction of costs). Trainings will also rely on the establishment of demonstration farms and experimental fields by the Soil Doctors, which might attract the interest of research institutes and universities involved in the programme. The programme also aims to educate farmers on soil science principles for practices of sustainable soil management and aims to achieve this by providing them with a set of tools composed of some educational materials and a soil testing methods (STM) manual for preliminary soil analysis. The STM is a collection of locally relevant, and easy to use, soil analyses procedures that would be selected by each area where the program is implemented.

An Exploration of Language, Policies, and Collaborative Actions by Planning and Public Health Professionals to Guide Active Community Design Jul 28 2023 The objective of this research project was to gain a better understanding of the language, policies and collaborative actions undertaken by planning and public health professionals that are relevant to the design of active communities. The overarching aim of this research was to develop resources to facilitate the collaborative efforts of planners and public health professionals working together to create active communities. To this end, three studies were undertaken. In the first study, publicly available documents, websites, and published reports from five Government of Ontario ministries were reviewed. The review produced 136 terms for inclusion in a joint glossary of terms for planners and public health professionals. In the second study legislation/strategies from the same five government ministries were reviewed and interviews were conducted with 10 government policy-makers to identify priorities, challenges and inter-sectoral collaboration to enhance the design of active communities. This process produced a policy inventory of 39 Ontario laws/strategies that govern planners and public health professionals working to enhance the design of active communities and identified challenges related to achieving inter-ministry collaboration and coordination towards a provincial active communities' agenda. The third study recruited planners and public health professionals working in the province of Ontario to participate in a concept mapping process to identify ways they currently work together to enhance the design of active communities. This process generated 72 actions that represent collaborative efforts planners and public health professionals engage in when designing active communities. These actions were then organized by importance and feasibility, resulting in the development of a coordinated action framework that features four planning actions for planners, nineteen proximal and six distal coordinated actions for planners and public health professionals and six public health actions for public health professionals. Collectively, results from these three studies contribute to our understanding of the language, policies, and collaborative actions employed by planning and public health professionals that are relevant to the design of active communities. The resources developed from this project are intended to support and facilitate the collaborative efforts of planners and public health professionals working to create active communities.

Sport and Physical Activity in the Heat Aug 17 2022 This unique book is the first of its kind to specifically explore the science, medicine, challenges and successful experiences of assisting those who must perform and thrive in hot conditions, with an eye toward maximizing both performance and safety. Beginning with both human and comparative physiology as it relates to coping with the heat, key concepts are subsequently elaborated, including heat acclimatization, work-to-rest ratios, hydration, sleep, the effects of altitude, and the use of drugs and supplements. The sections that follow discuss heat-related considerations in individual and team sports and other populations, monitoring techniques, and medical and legal issues. Athletes, warfighters and laborers are often forced to perform intense physical activity in the heat as a part of their jobs or lifestyle. The process of properly preparing for this challenge is multifaceted and often not fully understood or utilized. Sport and Physical Activity in the Heat is an excellent resource for team physicians, high-level coaches, serious athletes, athletic trainers, exercise scientists, strength and conditioning coaches, industrial hygienists, military commanders, or anyone involved in the process of maximizing performance and safety during exercise in the heat for the athlete, warfighter, or laborer.

Exercise and Diabetes Feb 28 2021 Physical movement has a positive effect on physical fitness, morbidity, and mortality in individuals with diabetes. Although exercise has long been considered a cornerstone of diabetes management, many health care providers fail to prescribe it. In addition, many fitness professionals may be unaware of the complexities of including physical activity in the management of diabetes. Giving patients or clients a full exercise prescription that take other chronic conditions commonly accompanying diabetes into account may be too time-consuming for or beyond the expertise of many health care and fitness professionals. The purpose of this book is to cover the recommended types and quantities of physical activities that can and should be undertaken by all individuals with any type of diabetes, along with precautions related to medication use and diabetes-related health complications. Medications used to control diabetes should augment lifestyle improvements like increased daily physical activity rather than replace them. Up until now, professional books with exercise information and prescriptions were not timely or interactive enough to easily provide busy professionals with access to the latest recommendations for each unique patient. However, simply instructing patients to "exercise more" is frequently not motivating or informative enough to get them regularly or safely active. This book is changing all that with its up-to-date and easy-to-prescribe exercise and physical activity recommendations and relevant case studies. Read and learn to quickly prescribe effective and appropriate exercise to everyone.
