Considers (87) S. 1368. The maritime logistics industry is currently experiencing a massive acceleration in its verticalization process which after almost ten months, continues to make a global market tumble. This work explores how Vertical Integration (VI) of carriers is affecting both the carriers themselves as well as the shippers. In addition, this study aims to explain why not all shipping lines have decided to pursue VI as their current strategy. Based on the findings obtained, predictions are also made with regards to the future line of growth of the industry. The methodology applied is a case study research approach where the phenomenon of VI is explored by focusing on the case of the liner shipping industry. This work uses an exploratory, inductive research approach with a data set containing 17 samples divided into four key groups: carriers, shippers, inter-modal transportation providers and

freight forwarders. The empirical findings of this study outline the main advantages and disadvantages of VI for both carriers and shippers. However, it is discovered that the perception of each impact depends on the perspective from which the phenomenon is evaluated: shippers and carriers highlight different advantages and disadvantages of VI. Furthermore, the investigation performed makes us understand that two diverse strategies are currently co-existing in the market and that the long-term goals, the shipping lines' vision, their target markets and financials are the key reasons that explain why not all carriers have opted for VI. In terms of the managerial implications for the future growth of this industry, it can be argued that at least until 2024 we will not see a stabilisation of freight rates because market consolidation, port decongestion and a growth in market supply is required for moderate prices to come. Finally, it is believed that VI will continue in ocean shipping, but that it will only last in time based on the results it yields. Nonetheless, even though the survival of freight forwarders has been widely questioned, it can be concluded that they will persist as fundamental intermediaries of supply chains. In a nutshell, this work sheds light on today's trends in the shipping market while it opens up a new line of discussion for the impacts of VI and the future trends to come in the liner shipping sector. A selective reporter of decisions rendered by the Interstate Commerce Commission and federal and state courts pertaining to federal motor carrier, water carrier, and freight forwarder regulation, with case table, docket table, citation table, and topical index. These proceedings contain research papers presented at the 5th International Conference on Dynamics in Logistics, held in Bremen, Germany, February 2016. The conference is concerned with dynamic aspects of logistic processes and networks. The spectrum of topics reaches from modeling, planning and control of processes over supply chain management and maritime logistics to innovative technologies and robotic applications for cyber-physical production and logistic systems. The growing dynamic confronts the area of logistics with completely new challenges: it must become possible to describe, identify and analyze the process changes. Moreover, logistic processes and networks must be redesigned to be rapidly and flexibly adaptable to continuously changing conditions. The book primarily addresses researchers and practitioners from the field of industrial engineering and logistics, but it may also be beneficial for graduate students. This book selects leading, innovative and influential Chinese maritime judgments and presents full translation of them, with brief summary, to the readers so that they can have insights of how the Chinese maritime judges interpret, apply and develop Chinese maritime law in practice. China trades with other states in trillions of USD every year, and about 95% of the cargoes are carried by ocean-going ships calling at

hundreds of Chinese ports each single day. Due to the enormous and steadily growing trade volume and shipping activities, foreign ships, companies and persons are often caught by the Chinese maritime law and court. The parties involved and their lawyers are more than ever enthusiastic to study Chinese maritime cases in order to deal with their own cases properly or, if possible, predict the potential problems and avoid the disputes outright. The book is appealing to and benefits worldwide law students, academics, practitioners and industrial people in the shipping, trade, insurance and financial fields. The book remedies to certain extent the situation that there is lack of authoritative sources available to foreign personnel to look into how Chinese justice system functions.
