Metamorphosis brings astonishing and exciting changes to a pair of caterpillar friends, who take pride in being the same--and different. Two caterpillar friends love what they have in common--lots of legs and a talent for chewing leaves into funny shapes. And when it's time to build cocoons, they hang theirs side by side. "Happy metamorphosis," says an older, more knowledgeable butterfly. And it is a happy metamorphosis indeed--for when the two emerge from their cocoons, they can fly! But so much else has changed--as one is now a moth, who flies by night, and the other is a butterfly, who flies by day. How will things work now? Fortunately some things never change--like true friends figuring out a way to be together, and happily flying into the sunset and sunrise. The Families of Malesian Moths and Butterflies provides a compendium of detailed information on the rich diversity of moths and butterflies of Malesia. It includes not only a key to the families (and some subfamilies) and field hints for the identification of larval stages, but also deals with their biology, biogeography, phylogeny and classification, and provides guidance for their collection and study. Familie that are reported or suspected to occur in Malesia are described in some depth, with a reference section intended to include as comprehensive a list as possible of the key works to the fauna. The clearest and sharpest recognition guide to over 500 butterfly and moth species from around the world.
