Kids and Credibility May 24 2020 Findings from a survey of youthful Internet users that was designed to assess kids' beliefs about the credibility of online information. How well do children navigate the ocean of information that is available online? The enormous variety of Web-based resources represents both opportunities and challenges for Internet-savvy kids, offering extraordinary potential for learning and social connection but little guidance on assessing the reliability of online information. This book reports on the first large-scale survey to examine children's online information-seeking strategies and their beliefs about the credibility of that information. This Web-based survey of 2,747 children, ages 11 to 18 (and their parents), confirms children's heavy reliance on the Internet. They are concerned about the credibility of online information, but 89 percent believe that "some" to "a lot" of it is believable; and, choosing among several options, they rate the Internet as the most believable information source for entertainment, commercial products, and schoolwork (more credible than books for papers or projects). Most have more faith information found on Wikipedia more than they say others should; and they consider an article on the Web site of Encyclopedia Britannica more believable than the identical article found on Wikipedia. Other findings show that children are appropriately skeptical of trusting strangers they meet online, but not skeptical enough about entertainment and health information found online. Older kids are more rigorous in their assessment of online information than younger ones; younger children are less analytical and more likely to be fooled.

A History of Video Art Jul 27 2020 A History of Video Art is a revised and expanded edition of the 2006 original, which extends the scope of the first edition, incorporating a wider range of artists and works from across the globe and explores and examines developments in the genre of artists' video from the mid 1990s up to the present day. In addition, the new edition expands and updates the discussion of theoretical concepts and ideas which underpin contemporary artists' video. Tracking the changing forms of video art in relation to the revolution in electronic and digital imaging that has taken place during the last 50 years, A History of Video Art orients video art in the wider art historical context, with particular reference to the shift from the structuralism of the late 1960s and early 1970s to the post-modernist concerns of the 1980s and early 1990s. The new edition also explores the implications of the internationalisation of artists' video in the period leading up to the new millennium and its concerns and preoccupations including post-colonialism, the post-medium condition and the impact and influence of the internet.

Digital Video Quality Oct 10 2021 Visual quality assessment is an interdisciplinary topic that links image/video processing, psychology and physiology. Many engineers are familiar with the image/video processing; transmission networks side of things but not with the perceptual aspects pertaining to quality. Digital Video Quality first introduces the concepts of human vision and visual quality. Based on these, specific video quality metrics are developed and their design is presented. These metrics are then evaluated and used in a number of applications, including image/video compression, transmission and watermarking. Introduces the concepts of human vision and vision quality. Presents the design and development of specific video quality metrics. Evaluates video quality metrics in the context of image/video compression, transmission and watermarking. Presents tools developed for the analysis of video quality

Disability and Human Rights Apr 23 2020 Experienced by more than one billion people worldwide, disability is increasingly recognised as a human rights issue internationally. Completely up to date, Disability and Human Rights draws on cutting edge international research and real life examples to explore the global dimension of disability and to critically review progress on the implementation of the United Nations Convention on the Rights of Persons with Disabilities. This book provides readers with an in-depth exploration of disability across key areas of human rights, including health, education, employment, accessibility and independent living. It demonstrates how these issues are integral to achieving full and equal participation of disabled people in human societies across the life cycle. The book analyses the impact of poverty, the importance of support and the relevance of culture and it maps out how to make disability rights a reality in the coming decades. Chapters are enriched with a wide range of international case examples and questions for reflection to deepen readers' understanding of the material. Students and practitioners from a wide range of backgrounds, including disability studies, human rights, social work and social care will benefit from this much-needed new global perspective on disability.

Food Quality And Standards - Volume II Jun 25 2020 Food Quality and Standards is a component of Encyclopedia of Food and Agricultural Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The Theme on Food Quality and Standards is so organized that it starts first the necessity of food quality control and food legislation and standards is explained and focuses on problems of food safety and connection between adequate nutrition and health. This is continued with food safety aspects which are strongly connected with good agricultural practice (GAP) and good manufacturing practice (GMP) and also prevention of food-borne diseases. The system and organization of food quality control at government -, production- and private (consumer) level is treated. Methods of quality control and trends of their development are also briefly discussed. Quality requirements of main groups of food with special aspects of functional foods, foods for children and specific dietary purposes are overviewed. Finally some international institutions involved in this work are presented. For readers interested in specific details of this theme an overview is given about microbiology of foods (including industrial use of microorganisms in food production and food-borne pathogens) and food chemistry (focused on nutrients and some biologically active minor food constituents). These three volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

Strength and Conditioning Jul 19 2022 Written for both the undergraduate/graduate level student as well as practitioners in the field, this text incorporates all programming aspects of strength and conditioning including training methods to develop muscular strength and power, flexibility, and the development of effective warm-up regimens. Performance analysis techniques in sport are introduced while the constraints-led approach to motor skills acquisition is presented as a framework that can guide the development of practices for the strength and conditioning practitioner. The biomechanical and motor skill acquisition concepts introduced in the text are then applied to fundamental movements including jumping, landing, and sprint running. Key Features: - Provides a solid introduction to biomechanics pertinent to the study of human movements - Discusses the performance analysis techniques in sport that can be used by the strength and conditioning practitioner to determine the physiological, mechanical, and technical demands of specific sports, and also the assessment of the techniques used in the execution of sport-specific skills - Includes a critical review of the different approaches to motor skill acquisition - Incorporates clear learning objectives and worked examples in each chapter that allow readers to apply the concepts to real-life situations - Discusses the application of the most recent research pertinent to concepts in each chapter - Includes appendices to expand on some of the more complex mathematical techniques required to perform biomechanical analyses and useful resources to aid the student in locating and evaluating scientific evidence.

Employment Communication Mar 03 2021 This softcover text centers on the communication skills necessary for conducting a successful job search or making a change in jobs. The ability to conduct research online, present a professional image, and communicate well with potential employers is critical to any job search. The workshops provided give instruction on how to create effective resumes and cover letters, search for job information, prepare for a successful interview, understand job expectations, and make a job change. Multimedia components enhance the impact of the workshops so users can complete a variety of exercises on the computer, watch video footage of people effectively communicating on the job, and use the Internet to conduct further research.

The Central Intelligence Agency and Overhead Reconnaissance Nov 22 2022 The CIA's 2013 release of its book *The Central Intelligence Agency and Overhead Reconnaissance 1954–1974* is a fascinating and important historical document. It contains a significant amount of newly declassified material with respect to the U-2 and Oxcart programs, including names of pilots; codenames and cryptonyms; locations, funding, and cover arrangements; electronic countermeasures equipment; cooperation with foreign governments; and overflights of the Soviet Union, Cuba, China, and other countries. Originally published with a Secret/No Foreign Dissemination classification, this detailed study describes not only the program's technological and bureaucratic aspects, but also its political and international context, including the difficult choices faced by President Eisenhower in authorizing overflights of the Soviet Union and the controversy surrounding the shoot down there of U-2 pilot Francis Gary Powers in 1960. The authors discuss the origins of the U-2, its top-secret testing, its specially designed high-altitude cameras and complex life-support systems, and even the possible use of poison capsules by its pilots, if captured. They call attention to the crucial importance of the U-2 in the gathering of strategic and tactical intelligence, as well as the controversies that the program unleashed. Finally, they discuss the CIA's development of a successor to the U-2, the Oxcart, which became the world's most technologically advanced aircraft. For the first time, the more complete 2013 release of this historical text is available in a professionally typeset format, supplemented with higher quality photographs that will bring alive these incredible aircraft and the story of their development and use by the CIA. This edition also includes a new preface by author Gregory W. Pedlow and a foreword by Chris Pocock. Skyhorse Publishing, as well as our Arcade imprint, are proud to publish a broad range of books for readers interested in history--books about World War II, the Third Reich, Hitler and his henchmen, the JFK assassination, conspiracies, the American Civil War, the American Revolution, gladiators, Vikings, ancient Rome, medieval times, the old West, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

Improving Complex Systems Today Jun 17 2022 As the main theme of *Improving Complex Systems Today* implies, this book is intended to provide readers with a new perspective on concurrent engineering from the standpoint of systems engineering. It can serve as a versatile tool to help readers to navigate the ever-changing state of this particular field. The primary focus of concurrent engineering was, at first, on bringing downstream information as far upstream as possible by introducing parallel processing in order to reduce time to market and to prevent errors at a later stage which would sometimes cause irrevocable damage. Up to now, numerous new concepts, methodologies and tools have been developed, but over concurrent engineering's 20-year history the situation has changed extensively. Now, industry has to work in the global marketplace and to cope with diversifying requirements and increasing complexities. Such globalization and diversification necessitate collaboration across different fields and across national boundaries. Thus, the new concurrent engineering calls for a systems approach to gain global market competitiveness. *Improving Complex Systems Today* provides a new insight into concurrent engineering today.
