**News Framing Effects Nov 11 2021 News Framing Effects is a guide to framing effects theory, one of the most prominent theories in media and communication science. Rooted in both psychology and sociology, framing effects theory describes the ability of news media to influence people's attitudes and behaviors by subtle changes to how they report on an issue. The book gives expert commentary on this complex theoretical notion**

**alongside practical instruction on how to apply it to research. The book's structure mirrors the steps a scholar might take to design a framing study. The first chapter establishes a working definition of news framing effects theory. The following chapters focus on how to identify the independent variable (i.e., the "news frame") and the dependent variable (i.e., the "framing effect"). The book then considers the potential limits or enhancements of the proposed effects (i.e., the "moderators") and how framing effects might emerge (i.e., the "mediators"). Finally, it asks how strong these effects are likely to be. The final chapter considers news framing research in the light of a rapidly and fundamentally changing news and information market, in which technologies, platforms, and changing consumption patterns are forcing assumptions at the core of framing effects theory to be re-evaluated.**

**Framing Inequality May 30 2023 Neoliberal policy approaches have swept over the American political economy in recent decades. In Framing Inequality, Matt Guardino focuses on the power of corporate news media in shaping how the public understands the pivotal policy debates of this period. Drawing on a wide range of empirical evidence from the dawn of the Reagan era into the Trump administration, he explains how profit pressures and commercial imperatives in the media have narrowed and trivialized news coverage and influenced public attitudes in the process. Guardino highlights how the political-economic structure of mainstream media operates to magnify some political messages and to mute or shut out others. He contends that news framing of policies that contribute to economic inequality has been unequal, and that this has undermined Americans' opportunities to express their views on an equal basis. Framing Inequality is a unique study that offers critical understanding of not only how neoliberalism succeeded as a political project, but also how Americans might begin to build a more democratic and egalitarian media system.**

**Improving Palliative Care for Cancer May 18 2022 In our society's aggressive pursuit of cures for cancer, we have neglected symptom control and comfort care. Less than one percent of the National Cancer Institute's budget is spent on any aspect of palliative care research or education, despite the half million people who die of cancer each year and the larger number living with cancer and its symptoms. Improving Palliative Care for Cancer examines the barriers—scientific, policy, and social—that keep those in need from getting good palliative care. It goes on to recommend public- and private-sector actions that would lead to the development of more effective palliative interventions; better information about currently used interventions; and greater knowledge about, and access to, palliative care for all those with cancer who would benefit from it.**

**Software Pioneers May 25 2020 A lucid statement of the philosophy of modular programming can be found in a 1970 textbook on the design of system programs by Gouthier and Pont [1, 1 Cf10. 23], which we quote below: A well-defined segmentation of the project effort ensures system modularity. Each task fonos a separate, distinct program module. At implementation time each module and its inputs and outputs are well-defined, there is no confusion in the intended interface with other system modules. At checkout time the in tegrity of the module is tested independently; there are few sche duling problems in synchronizing the completion of several tasks before checkout can begin. Finally, the system is maintained in modular fashion; system errors and deficiencies can be traced to specific system modules, thus limiting the scope of detailed error searching. Usually nothing is said about the criteria to be used in dividing the system into modules. This paper will discuss that issue and, by means of examples, suggest some criteria which can be used in decomposing a system into modules. A Brief Status Report The major advancement in the area of modular programming has been the development of coding techniques and assemblers which (1) allow one modu1e to be written with little knowledge of the code in another module, and (2) allow modules to be**

**The Play Cycle Jun 30 2023 Twenty years after Gordon Sturrock and the late Professor Perry Else's 'Colorado Paper' introduced the Play Cycle, this theory of play now supports professional playwork practice, training and education. The Play Cycle: Theory, Research and Application is the first book of its kind to explain the theoretical concept of the Play Cycle, supported by recent research, and how it can be used as an observational method for anyone who works with children in a play context. The book investigates the understandings of the Play Cycle within the playwork field over the last 20 years, and its future application. It addresses each aspect of the Play Cycle (metalude, play cue, play return, play frame, loop and flow and annihilation) and combines the theoretical aspect of the Play Cycle with empirical research evidence. The book also provides an observational tool for people to observe and record play cycles. This book will appeal to playworkers, teachers, play therapists and professionals working in other contexts with children, such as hospitals and prisons. It will support practitioners and students in learning about play and provide lecturers and trainers with a new innovative teaching and training aide.**

**Care or Neglect? Aug 09 2021 "The method of Formgeschichte seeks to help in answering the historical questions as to the nature and trustworthiness of our knowledge of Jesus, and also in solving a theological problem properly so-called. It shows in what way the earliest testimony about Jesus was interwoven with the earliest testimony about the salvation which had appeared in Jesus Christ. Thereby it attempts to emphasise and illuminate the chief elements of the message upon which Christianity was founded." From the Author's Preface Ably translated by Bertram Lee Woolf, this is the classic exposition of the German school of theology known as Formgeschichte or the criticism of literary form, which through literary and historical analysis seeks to understand the origins of the traditions of the New Testament, and in so doing bring to light the original intentions and interests of those earliest traditions.**
