Principles of Project and Infrastructure Finance Dec 19 2022 Current books on project finance tend to be non-technical and are either procedural or rely heavily on case studies. In contrast, this textbook provides a more analytical perspective, without a loss of pragmatism. Principles of Project and Infrastructure Finance is written for senior undergraduates, graduate students and practitioners who wish to know how major projects, such as residential and infrastructural developments, are financed. The approach is intuitive, yet rigorous, making the book highly readable. Case studies are used to illustrate integration as well as to underscore the pragmatic slant.

Plunkett's Energy Industry Almanac 2008 Mar 22 2023 Covers things from major oil companies to electric and gas utilities, plus pipelines, refiners, retailers, oil field services and engineering. This title includes topics such as coal, natural gas and LNG. It includes statistical tables that cover topics ranging from energy consumption, production and reserves to imports, exports and prices.

Moody's Transportation Manual Jun 20 2020

Johor Sep 16 2022 In 1990, the Malaysian state of Johor—along with Singapore and the Indonesian island of Batam—launched the Growth Triangle to attract foreign direct investment. For Johor, this drive was very successful, transforming its economy and driving up income levels. Today, Johor is one of Malaysia's "developed" states, housing large clusters of electrical and electronics, food processing, and furniture producing firms. While welcome, this structural transformation has also entailed important challenges and strategic choices. After three decades, Johor's manufacture-for-export model is under question, as it faces increasing competition and flat-lining technological capabilities. In response, the state has sought to diversify its economy through strategic investments in new, mostly service-based activities. Yet, Johor retains pockets of excellence in traditional sectors that also require support and policy attention. The state's economic transformation has also been accompanied by far-reaching political, social, and environmental change. Not least, Johor's growing population has generated demand for affordable housing and put pressure on public services. The strain has been exacerbated by workers from other states and overseas. These demographic factors and large-scale projects have, in turn, put stress on the environment. These economic and social changes have also had political ramifications. While Johor is a bastion of two of the country's oldest and most established political parties, the state's large, urban and connected electorate has made it hospitable terrain for new political organisations. Beyond electoral politics, Johor is also the home of a powerful and influential royal family, with very specific ideas about its role in the state's political life. Building on earlier work by the ISEAS – Yusof Ishak Institute on the Singapore-Johor-Riau Islands Cross-border Region, this book focuses on this important Malaysian state, as it deals with important domestic challenges on one hand and strives to engage with international markets on the other. "I have always felt that there are many more complementarities possible between Singapore and Johor. This would be to the benefit of both economies, but the political division between the two was just too great. The two economies lived adjacent but separate lives—Singapore looking out to the world and Johor looking north—until initiatives such as the Iskandar Malaysia development corridor began to change things significantly. The concern now is that the pendulum may have swung too much the other way, driven by the huge income and price differentials as well as Singapore's global city status. Francis and Serina's compilation is a welcomed attempt at understanding Johor in a much more comprehensive manner; not just its changing economy but how its politics and society have been impacted by these changes – which is a more endogenized view of economic integration." — Dr Nungsari Ahmad Radhi, former MP Balik Palau and Executive Director, Khazanah Nasional "Drawing on the expertise of internationally known specialists, this insightful collection explores the multiple ways in which Johor's economic development has influenced the contemporary political scene, and the effects on local society and the environment. Skillfully edited and meticulously researched, Johor: Abode of Development? is not merely required reading for anyone interested in contemporary Malaysia, but will be of immense value to historians of the future."—Barbara Watson Andaya, Professor of Asian Studies, University of Hawai'i

The Netherlands, Norway, Portugal, Spain, Sweden, Switzerland Mar 10 2022 This established directory has been thoroughly revised, updated and expanded to provide current and comprehensive information on more than 24,000 of Europe's largest companies. Four volumes are filled with facts and contacts for major public and private companies in all 20 countries of Western Europe.

Port Business Sep 23 2020 Port Business is essential reading for all those with an interest in trade and transportation and the role of ports in the global supply chain. It discusses the various types of ports in existence, identifies the major ports per category, analyzes what the key business drivers are, describes their governance, how they are managed, which trends influence them, and what kind of impact they have on supply chains. Dr. Jürgen Sorgenfrei uses his significant consulting and project development experience within the international ports, shipping, rail & logistics sector, and in

global economics, trade, analytics, and forecasting as well as in intermodal hinterland transport to provide this comprehensive overview of port management. The book is a combination of a strong background in principles and practical knowledge and is an indispensable resource for those interested in maritime economics. .

The Official Railway Guide Aug 23 2020

Handbook of Operations Analytics Using Data Envelopment Analysis Aug 15 2022 This handbook focuses on Data Envelopment Analysis (DEA) applications in operations analytics which are fundamental tools and techniques for improving operation functions and attaining long-term competitiveness. In fact, the handbook demonstrates that DEA can be viewed as Data Envelopment Analytics. Chapters include a review of cross-efficiency evaluation; a case study on measuring the environmental performance of OECS countries; how to select a set of performance metrics in DEA with an application to American banks; a relational network model to take the operations of individual periods into account in measuring efficiencies; how the efficient frontier methods DEA and stochastic frontier analysis (SFA) can be used synergistically; and how to integrate DEA and multidimensional scaling. In other chapters, authors construct a dynamic three-stage network DEA model; a bootstrapping based methodology to evaluate returns to scale and convexity assumptions in DEA; hybridizing DEA and cooperative games; using DEA to represent the production technology and directional distance functions to measure bank performance; an input-specific Luenberger energy and environmental productivity indicator; and the issue of reference set by differentiating between the uniquely found reference set and the unary and maximal types of the reference set. Finally, additional chapters evaluate and compare the technological advancement observed in different hybrid electric vehicles (HEV) market segments over the past 15 years; radial measurement of efficiency for the production process possessing multi-components under different production technologies; issues around the use of accounting information in DEA; how to use DEA environmental assessment to establish corporate sustainability; a summary of research efforts on DEA environmental assessment applied to energy in the last 30 years; and an overview of DEA and how it can be utilized alone and with other techniques to investigate corporate environmental sustainability questions.

Chinese Maritime Cases Feb 21 2023 This book selects leading, innovative and influential Chinese maritime judgments and presents full translation of them, with brief summary, to the readers so that they can have insights of how the Chinese maritime judges interpret, apply and develop Chinese maritime law in practice. China trades with other states in trillions of USD every year, and about 95% of the cargoes are carried by ocean-going ships calling at hundreds of Chinese ports each single day. Due to the enormous and steadily growing trade volume and shipping activities, foreign ships, companies and persons are often caught by the Chinese maritime law and court. The parties involved and their lawyers are more than ever enthusiastic to study Chinese maritime cases in order to deal with their own cases properly or, if possible, predict the potential problems and avoid the disputes outright. The book is appealing to and benefits worldwide law students, academics, practitioners and industrial people in the shipping, trade, insurance and financial fields. The book remedies to certain extent the situation that there is lack of authoritative sources available to foreign personnel to look into how Chinese justice system functions.

Maintenance Management Feb 09 2022 Maintenance is a critical variable in industry to achieve competitiveness. Therefore, correct management of corrective, predictive, and preventive politics in any industry is required. Maintenance Management considers the main concepts, state of the art, advances, and case studies in this topic. This book complements other subdisciplines such as economics, finance, marketing, decision and risk analysis, engineering, etc. The book analyzes real case studies in multiple disciplines. It considers the topics of failure detection and diagnosis, fault trees, and subdisciplines (e.g. FMECA, FMEA, etc.). It is essential to link these topics with finance, scheduling, resources, downtime, etc. to increase productivity, profitability, maintainability, reliability, safety, and availability, and reduce costs and downtime. This book presents important advances in mathematics, models, computational techniques, dynamic analysis, etc., which are all employed in maintenance management. Computational techniques, dynamic analysis, probabilistic methods, and mathematical optimization techniques are expertly blended to support the analysis of multicriteria decision-making problems with defined constraints and requirements. The book is ideal for graduate students and professionals in industrial engineering, business administration, industrial organization, operations management, applied microeconomics, and the decisions sciences, either studying maintenance or who are required to solve large, specific, and complex maintenance management problems as part of their jobs. The book will also be of interest to researchers from academia.

Industrial Tourism Jul 14 2022 Industrial tourism presents opportunities, both in terms of income and as a tool of management, for individual firms who open their doors - and consequently their local regions - to the public. But how can these opportunities be organised in a way that enables both the city and the enterprise to take advantage? This book analyzes the conditions for successful industrial tourism development using case studies of Wolfsburg, Cologne, Pays de la Loire, Turin, Shanghai and Rotterdam, and makes astute recommendations for cities and companies with ambitions in this field.

Plunkett's Energy Industry Almanac 2006 Jun 25 2023 The energy industry is boiling over with changes. Deregulation, new opportunities in foreign fields and markets and environmental challenges are rushing together head-on to shape the energy and utilities business of the future. Extremely deep offshore wells in the Gulf of Mexico and offshore of West Africa are being drilled at immense cost. Meanwhile China has become a major energy importer and Russia has become a major exporter. In the U.S., Europe and Japan, renewable and alternative energy sources are developing quickly, including big breakthroughs in wind power and fuel cells. This exciting new reference book covers everything from major oil companies to electric and gas utilities, plus pipelines, refiners, retailers, oil field services and engineering. Petroleum topics include upstream and downstream. Additional topics include coal, natural gas and LNG. More than a dozen statistical tables cover everything from energy consumption, production and reserves to imports, exports and prices. Next, our unique profiles of the Energy 500 Firms are also included, with such vital details as executive contacts by title, revenues, profits, types of business, web sites, competitive advantage, growth plans and more. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

The Handbook of Market Intelligence Apr 18 2020 Product Description This resource gives readers a step-by-step roadmap for establishing, conducting, and further developing market intelligence programs within an organization, turning market data into actionable insights. It is full of best practice advice based on hundreds of real-life international case studies. The material is backed up by extensive global survey data, providing readers with benchmark data on how intelligence programs are being organized, operated, and resourced worldwide. From the vast amount of examples, the authors have distilled Six Key Success Factors for organizing future-oriented corporate intelligence programs. From the Inside Flap Global companies spend millions of dollars on conducting Market Intelligence each year. Yet only 10% have achieved Market Intelligence capabilities that are truly world class. Such companies enjoy much higher efficiencies in decision making and strong return-on-investment on their Market Intelligence budgets. What are their secrets? What can the other 90% do in order to ensure they have their Market Intelligence scope, processes, deliverables, tools, organization and culture right? Get an insider's look at how some of the world's most respected international companies use Market Intelligence. This book provides over 40 enlightening case studies from companies such as Cisco Systems, ABB, Dunkin' Brands and Statoil, as well as findings from two global surveys on Market Intelligence programs and trends. It also features a step-by-step roadmap to help companies raise their intelligence

ambitions, by using the six Key Success Factors outlined in the World Class Market Intelligence Framework developed by the authors. Readers will be able to implement the practical ideas immediately and drive the systematic development of their own world class market intelligence functions – as well as benchmark their own results against global best practices.

Port Systems in Global Competition Nov 25 2020 In a world where most international trade is carried by sea, each port can be seen as a unique chokepoint competing to attract ever more traffic and economic activities. However, ports can also be seen as parts of a wider system, which can be defined as a system of two or more ports located in proximity within a given area. Their fate and governance is jointly influenced when belonging to the same region, country, or transnational space. Investments, shocks, innovations, and delays occurring in one port often affect other ports within a certain spatial range and time lapse. Further understanding of such co-developments in port systems is necessary to go beyond local specificities, through a multidisciplinary and multi-level contribution. *Port Systems in Global Competition* is an answer to the strong and urgent need for reviewing the relevant theories, concepts, methods, and sources that can be mobilized for the analysis of port systems. With contributions from reputable scholars coming from no less than 11 countries in Europe, Asia, and North America, this book delves into the analysis of port systems from diverse disciplinary angles (geography, regional science, economics, management, engineering, and mathematics/computer sciences), and covering innovative empirical approaches to various port systems in the world. The theoretical and empirical knowledge can support and enhance decision-making in relation with the development of ports, supply chains, and transport networks in general. This book is an ideal companion to academics and upper-level students interested in the analysis of transport and economic systems in general, as well as the effective ways to answer complex issues in transportation and socio-economic development. It will be a valuable resource for those researching or studying transportation and supply chains, maritime and port economics, as well as regional development and human geography.

Foreign Companies in South Korea Oct 25 2020

Developing Eastern Johor Sep 04 2021 The Pengerang Integrated Petroleum Complex (PIPC) is a huge development that has emerged on the east coast of Johor. Comprising Petronas' largest refinery facility and numerous ancillary and supporting industrial areas, it is pegged to diversify Malaysia's petrochemical industry and reap the benefits of the area's fortunate position on international maritime trade routes. While initial responses to the PIPC development were of concern for Singapore's oil and gas business, the island-nation's long reputation and position in the industry means that the PIPC has some steep learning curves to traverse before coming on par with its southerly neighbour. However, the PIPC is likely to provide a solution to Singapore's limitations in terms of costly services and limited land space. It may also rejuvenate an industry now seen by some SMEs to be somewhat stagnant. While there are myriad global trends that may inhibit the complete success of the PIPC, it seems to be well placed to provide economic spillover benefits for Johor and Malaysia. Even if it does not become a top regional player, it will be able to meet local demands for Euro 5 quality products. The PIPC received a boost with Saudi Aramco's commitment to invest in the Refinery and Petrochemical Integrated Development (RAPID) project. More investments may come on board when the refinery begins operations in 2019. A full assessment of PIPC's success or failure can be conducted once other announced developments are completed and full operations begin.

Tios Asean 2011 Aug 27 2023

Buyer's Guide, Latin American Chemical Industry Jan 08 2022

Pipelines Jan 20 2023 *Pipelines: Emerging Technologies and Design Criteria*, the latest release in the Sustainable Oil and Gas Development series, delivers the tools needed to understand more environmentally-friendly design, construction and maintenance of oil and gas pipelines. Designed to introduce ideal solutions and current state-of-the-art practices, the reference includes guidelines on environmental impact assessment and sustainable route design as well as the sustainability of additives and power systems. Material selection, real-time processing of smart well data and remote sensing are also discussed. Rounded out with inspection tools and emerging technology such as novel corrosion protection, this book gives pipeline engineers a guide on safer alternatives and upcoming guidelines in the race to reduce emissions. Provides insights to more environmentally-friendly protocols for material selection, construction and integrity Helps readers determine more accurate protection plans and learn the latest techniques, including nanotechnology and sustainable hydrate and wax mitigation Presents valuable insights from a well-known author with extensive experience in both academia and industry
