*Sustainable Health Through Food, Nutrition, and Lifestyle* Mar 05 2021  
This book uncovers the multiple layers of challenges posed to achieve sustainable human health and improves the understanding of interactive areas set by the UN Sustainable Development Goals (1) no poverty, (2) zero hunger, (3) good health and wellbeing, (6) clean water and sanitation, and (11) sustainable cities and communities. The book focuses on conceptual understanding, food, nutrition, lifestyle, and their integration to reinforce the ideas of holistic health principles.' The most important drivers of sustainable health are food, nutrition, and lifestyle. Healthy food is a basic need of human beings. In under-developed regions, people are underweight and facing malnutrition, with a prevalence of deficiency diseases due to low intake of micro-nutrients such as vitamin A, iodine, and protein among others. A good diet as well as lifestyle has a tremendous bearing on a person's health, emotional stability, and enthusiasm for life. The global coronavirus pandemic has brought unimaginable devastation and hardship in all corners of the globe, questioning the existing healthcare services, health policies, and health planning across the developed and developing countries. It has also exposed the lacunae in understanding health, the base of human happiness. The global

community needs to gravely ponder the health issues we are facing and explore sustainable solutions for health recovery and the wellbeing of humanity.

Behind the Success and Failure of U.S. Export Intermediaries Feb 13 2022 Trading across borders, export intermediaries are specialized service firms that connect domestic manufacturers with overseas buyers. How do they do it? What determines their success or failure? Have they really lowered transaction costs for their clients, minimized agency costs, and possessed competitive resources and capabilities in world trade? Surprisingly, no study until now has answered these questions or has explored the underlying issues as thoroughly as Peng does here. Peng develops an integrated model of export intermediary performance. He focuses on the nature of export transactions and manufacturer-intermediary relationships which may lead to agency problems, and underlines the importance of valuable, unique, and hard-to-imitate resources and capabilities for intermediaries' competitive advantages. Peng employs a distinct analytical approach that highlights three underlying themes—transactions, agents, and resources—then tests his model with six critical case studies and a 1,000-firm mail survey. Operators of export intermediaries seeking ways to improve their performance, aspiring entrepreneurs studying the export business for niche opportunities, manufacturing executives seeking top quality service from export intermediaries, and government officials in charge of export promotion and pertinent legislation—all will find Peng's book a useful examination of issues critical to their work.

*Solid State Ionics* Jun 27 2020 Solid state ionics, being a multidisciplinary area, is expected to grow at a faster rate in the new millennium, prompting the discovery of new materials and devices, as well as helping to optimize the known devices, especially the portable power sources and display systems. The Asian Society for Solid State Ionics (ASSSI) plays a significant role in bringing together researchers from the Asian countries, every two years, to exchange notes and ideas, to foster friendship and collaboration, and to discuss the prospects. The topics covered in this volume are: ion dynamics, theoretical modeling, ion-conducting polymers, gels and ceramics, glasses, crystalline materials including nano-phases, composites, electrode/electrolyte interfaces and novel experimental techniques. Papers on crystalline materials deal with ion conduction

in Li, Na, Ag, Tl, F and O-containing compounds. Materials and device aspects have received wide coverage, especially the areas of lithium ion batteries (LIBs) and solid oxide fuel cells, (SOFCs). Rechargeable high energy density LIBs, especially those employing immobilized gel or polymer electrolyte, are the favorite portable power sources in the new millennium. As expected, a large number of papers on both cathodes and polymer electrolytes for LIBs were presented at the conference. The papers on fuel cells almost exclusively deal with SOFCs, indicating the great importance being given to this area in Japan and China. A breakthrough in materials and technology of SOFC is expected in the coming decade. This volume will be useful not only to the active researchers in the field but also to youngsters entering the exciting area of solid state ionics.
