The Project Management Paradigm is all about how projects should be managed and controlled, including people and tools. Divided into two main parts, the first concentrates on principles and the human aspects of project management, whilst the second specifies a structured, practical and formal process to managing projects and ensuring their success. Follow three project managers as they apply the 44 best project practices in different organizations. See how they adapt them to each organization and projects of differing sizes and scales. Chris Pimbock is a new project manager who works for a small rapidly growing startup. Their continuing growth, however, is slowed by customer service problems. Staff and resources are severely limited. Chris has to design a project to fix the problem without busting the budget. He needs to work with marketing people who are nearly hysterical over losing clients because of the customer service problems. They need better systems, more efficient facilities and streamlined operations. Projects are fairly new to the company and the sponsors, affected managers and the professional staff don't know the

role they should play. Management also has a problem in setting priorities and sticking to them. Terrie Evans has her PMP and 5 years of experience in a medium-sized Midwest public corporation. Her company is also suffering from customer service problems that are causing customers to leave for smaller more agile competitors. Marketing blames Operations and fingers are pointed in many other directions so blame avoidance is a major issue. There is also significant money involved. Terri is already getting project change requests to add items cut from last year's budget plus other "goodies". Additionally, everyone's favorite vendors are wrestling for advantage in the upcoming competitive bidding. If that wasn't enough, Terrie also has problems building her team. Departments are hedging on committing to lend resources to the project. Worse many of the team members see themselves as representing the interests of their "home" departments rather than doing actual project work. Preston McCarthy is a senior project manager (engagement manager) for an international consulting firm. He's managing a strategic project to improve customer service for a client's global operations. His team is composed of technical experts from Preston's firm and the client's employees. The latter are drawn from 5 countries, speak 3 different languages and have starkly different cultures. The client has twice tried to solve their customer service problems with solely internal teams. Both efforts failed miserably without fixing the problems. The top client executive will be retiring in a year and the VP's have already begun competing for the position. Everyone views customer service improvement project as either a prize or a target. Tens of thousands of readers rely on James Lewis's classic Project Planning, Scheduling & Control for hands-on help in bringing projects in on time and on budget. Now, this higher-level guide takes project managers beyond basic skills. Using the flexible and down-to-earth approach for which Lewis is famed, it covers advanced topics such as identifying customer requirements using QFD (quality function deployment); allocating resources for improved scheduling applying systems thinking; and using decision-support tools in project management.
