The mercurial Judy returns - and she's in a mood to take on the world! Judy Moody did not set out to save the world. She set out to win a contest. A Band-Aid contest. It all started with the Crazy-Strip contest - and the dream that she, Judy Moody, might one day see her very own adhesive-bandage design covering the scraped knees of thousands. But when her "Heal the World" motif merits only an honorable mention, Judy Moody realizes it's time to set her sights on something bigger. Class 3T is studying the environment, and Judy is amazed to learn about the destruction of the rain forest, the endangered species (not) in her own backyard, and her own family's crummy recycling habits. Now she's in a mood to whip the planet into shape - or her name isn't Judy Monarch Moody! "This chapter addresses the complicated topic of conspiracy theories. This topic is complicated because a conspiracy theory is not prima facie wrong. Yet one of the hallmarks of false scientific beliefs is the claim by their adherents that they are the victims of profiteering, deceit, and cover-ups by conglomerates variously composed of large corporations, government regulatory agencies, the media, and professional medical societies.

The trick is to figure out if the false ones can be readily separated from those in which there may be some truth. Only by carefully analyzing a number of such conspiracy theories and their adherents does it become possible to offer some guidelines as to which are most obviously incorrect. The chapter then studies the psychology of conspiracy theory adherence. It argues that belittling people who come to believe in false conspiracy theories as ignorant or mean-spirited is perhaps the surest route to reinforcing an anti-science position"-- A brand-new friend and a big class project put Judy in an international mood in this comical new adventure. Judy Moody cannot believe her ears. There at the lunch table, a girl called Amy Namey is interviewing Judy's best friends, Rocky and Frank. Even worse, Amy is dressed like Nellie Bly, daredevil woman reporter, much like Judy's emulation of a certain woman doctor. Is this clipboard-carrying girl destined to be Judy's new best enemy? Or new best friend? Judy Moody finds some unexpected potholes on the path to friendship as Class 3T takes a whirlwind tour of the globe, investigating everything from tooth-brushing sticks in Yemen to an Italian "spider dance"

along the way. Fans will cheer as Judy finally masters the challenge of making new friends and keeping the old — for sure and absolute positive! How many fun facts do you know about chewing gum? Is your personality more like Judy's or her brother Stink's? From pranks to yoga poses, making paper snowflakes to matching up pet tracks, this book is bursting with quizzes, challenges, crafts and other cool stuff. From the author of the #1 New York Times bestseller *She Persisted* comes a beautiful book about the animals who share our planet--and what we can do to help them survive. Did you know that blue whales are the largest animals in the world? Or that sea otters wash their paws after every meal? The world is filled with millions of animal species, and all of them are unique and special. Many are on the path to extinction. In this book, Chelsea Clinton introduces young readers to a selection of endangered animals, sharing what makes them special, and also what threatens them. Taking readers through the course of a day, *Don't Let Them Disappear* talks about rhinos, tigers, whales, pandas and more, and provides helpful tips on what we all can do to help prevent these animals from disappearing from our world entirely. With warm and engaging art by Gianna Marino, this book is the perfect read for animal-lovers and anyone who cares about our planet. The Effect: An Introduction to Research Design and Causality is about research design, specifically concerning research that uses observational data to make a causal inference. It is separated into two halves, each with different approaches

to that subject. The first half goes through the concepts of causality, with very little in the way of estimation. It introduces the concept of identification thoroughly and clearly and discusses it as a process of trying to isolate variation that has a causal interpretation. Subjects include heavy emphasis on data-generating processes and causal diagrams. Concepts are demonstrated with a heavy emphasis on graphical intuition and the question of what we do to data. When we "add a control variable" what does that actually do?
