Smarter Faster Better Jun 27 2023 In the international bestseller *The Power of Habit*, Pulitzer Prize-winning journalist Charles Duhigg explained why we do what we do. In *Smarter Faster Better*, he applies the same relentless curiosity, rigorous reporting and rich storytelling to explain how we can get better at the things we do. The result is a groundbreaking exploration of the science of productivity. A group of data scientists at Google embark on a four-year study of how the best teams function, and find that how a group interacts is much more important than who is in the group. A Marine Corps general, faced with low morale among recruits, reimagines boot camp - and discovers that instilling a 'bias toward action' can turn even the most directionless teenagers into self-motivating achievers. The filmmakers behind Disney's *Frozen* are on the brink of catastrophe - until they shake up their team in just the right way, spurring a creative breakthrough that leads to one of the highest-grossing movies of all time. What do these people have in common? They know that productivity relies on making certain choices. The way we frame our daily decisions; the big ambitions we embrace and the easy goals we ignore; the cultures we establish as leaders to drive innovation: these are the things that separate the merely busy from the genuinely productive. At the core of *Smarter Faster Better* are eight key concepts - from motivation and goal-setting to focus and decision-making - that explain why some people and companies get so much done. Drawing on the latest findings in neuroscience, psychology and behavioural economics - as well as the experiences of CEOs, educational reformers, four-star generals, airplane pilots and Broadway songwriters - this painstakingly researched book explains that the most productive people, companies and organizations don't merely act differently. They view the world, and their choices, in profoundly different ways.

Eco-Resin Crafts Dec 21 2022 Resin craft is a great way to make beautiful items for your home and jewelry for yourself or others. Hazel Oliver is the name behind Badger & Birch, whose eco-friendly practices include using solvent free and non-toxic resin, and incorporating natural waste such as mussel and oyster shells from her local restaurant, as well as natural minerals, gemstones, and crystals. In this her first book, Hazel shows you the basics of resin craft, including mixing and pouring, making molds, and finishing your pieces. The 30 projects include cups, trays, boxes, and other items for the home, as well as molded jewelry pieces in shell shapes and other natural forms. The soft colors, natural elements and beautiful finish of Hazel's work will inspire you to take up this flourishing new craft, or give you new ideas if you are already a keen resin crafter.

Groundwater Lowering in Construction Aug 17 2022 Linking theory and application in a way that is clear and understandable, *Groundwater Lowering in Construction: A Practical Guide to Dewatering, Second Edition* uses the authors' extensive engineering experience to offer practical guidance on the planning, design, and implementation of groundwater control systems under real conditions. Discover engineering methods that can help you improve working conditions, increase project viability, and reduce excavation costs. In the decade since publication of this book's first edition, groundwater lowering and dewatering activities have been increasingly integrated into the wider ground engineering schemes on major excavations to help provide stable and workable conditions for construction below groundwater level. Consequently, many engineering ventures now require a more in-depth assessment of potential environmental impacts of dewatering and groundwater control, and this book details the latest best practices to evaluate and address them. Includes New Chapters Covering: Cutoff methods used for groundwater exclusion Issues associated with permanent or long-term groundwater control systems Groundwater control technologies used on contaminated sites Methods needed to understand, predict, and mitigate potential environmental impacts of groundwater control works Updated to reflect the crucial technological and application advances shaping construction processes, this book contains valuable direction that can give you a true competitive advantage in the planning and execution of temporary and permanent dewatering works. The authors cover cutting-edge methods and key subjects, such as the history of dewatering, working on contaminated sites, site investigation techniques, and operation and maintenance issues, including health, safety, and legal aspects. Written for practising engineers and geologists as well as postgraduate engineering students, this updated manual on design and practice provides numerous case histories and extensive references to enhance understanding.

A Prole Do Bebê No. 1 Sep 25 2020 This suite of eight pieces portrays the ethnic or folk character of a child's dolls, drawing freely on national folk tunes. The set is edited by the Villa-Lobos scholar David P. Appleby, who was honored by the Brazilian government with the Villa-Lobos Centennial Medal for his outstanding research into the life and music of the composer. Each piece has its own unique, sharply drawn character and is sure to appeal with an abundant degree of rhythmic sophistication.

The Lessons of Tragedy Jun 15 2022 An eloquent call to draw on the lessons of the past to address current threats to international order The ancient Greeks hard-wired a tragic sensibility into their culture. By looking disaster squarely in the face, by understanding just how badly things could spiral out of control, they sought to create a communal sense of responsibility and courage—to spur citizens and their leaders to take the difficult actions necessary to avert such a fate. Today, after more than seventy years of great-power peace and a quarter-century of unrivaled global leadership, Americans have lost their sense of tragedy. They have forgotten that the descent into violence and war has been all too common throughout human history. This amnesia has become most pronounced just as Americans and the global order they created are coming under graver threat than at any time in decades. In a forceful argument that brims with historical sensibility and policy insights, two distinguished historians argue that a tragic sensibility is necessary if America and its allies are to address the dangers that menace the international order today. Tragedy may be commonplace, Brands and Edel argue, but it is not inevitable—so long as we regain an appreciation of the world's tragic nature before it is too late.

Food Safety Culture May 26 2023 Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne

disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

The Deaths of Others Jun 03 2021 Americans are greatly concerned about the number of our troops killed in battle--100,000 dead in World War I; 300,000 in World War II; 33,000 in the Korean War; 58,000 in Vietnam; 4,500 in Iraq; over 1,000 in Afghanistan--and rightly so. But why are we so indifferent, often oblivious, to the far greater number of casualties suffered by those we fight and those we fight for? This is the compelling, largely unasked question John Tirman answers in The Deaths of Others. Between six and seven million people died in Korea, Vietnam, and Iraq alone, the majority of them civilians. And yet Americans devote little attention to these deaths. Other countries, however, do pay attention, and Tirman argues that if we want to understand why there is so much anti-Americanism around the world, the first place to look is how we conduct war. We understandably strive to protect our own troops, but our rules of engagement with the enemy are another matter. From atomic weapons and carpet bombing in World War II to napalm and daisy cutters in Vietnam and beyond, we have used our weapons intentionally to kill large numbers of civilians and terrorize our adversaries into surrender. Americans, however, are mostly ignorant of these facts, believing that American wars are essentially just, necessary, and "good." Tirman investigates the history of casualties caused by American forces in order to explain why America remains so unpopular and why US armed forces operate the way they do. Trenchant and passionate, The Deaths of Others forces readers to consider the tragic consequences of American military action not just for Americans, but especially for those we fight.

Mexico Beach Feb 23 2023 Hurricane Michael may have taken away some of the landmarks, but these images reveal the history of Florida's Mexico Beach, once known as the "Unforgettable Coast". As French interests in the Americas dwindled, records indicate very little activity around Mexico Beach until rumors of buried riches and sunken ships brought treasure hunters to the coast. In the early 1900s, businessman Felix du Pont purchased the land known today as Mexico Beach. Resin to make turpentine was harvested from the native pine trees, and fishermen could not resist the migratory fish passing through the area's waters. By the 1930s, US Highway 98 was completed, and visitors could finally reach the sugar-soft sand beaches of the "Unforgettable Coast." By 1941, Tyndall Field was constructed and became a training site for Air Force pilots. In 1946, a group of farsighted businessmen, led by Gordon Parker, W.T. McGowan, and J.W. Wainwright, purchased 1,850 acres along the beach for \$65,000. Parker's son Charlie moved to the area in 1949 with his wife, Inky, and their family. He soon took over development responsibilities for the Mexico Beach Corporation and laid the groundwork for the beach town known and loved today. Charlie went on to become the city's first mayor and a lifelong advocate of the family-friendly community.

Chasing Success Jul 28 2023 This book examines how international expectations intersected with the United States Air Force's fight for autonomy and utility, explains how the service began to change, and asks how airpower-and the US military as a whole-might further deepen its efforts. The author expands perspectives on assessing and directing the use of airpower and encourages further work to maximize both mission accomplishment and civilian protection. The recent evolution of US airpower offers inspiring, if incomplete, evidence that the conduct of war can become more humane while remaining effective. Technology, adversaries, and the goals of armed conflict will continue to evolve, but the central challenge of humanizing war will endure. Part one outlines the challenge that contemporary expectations about the American use of force pose for airpower. Part two describes the Air Force's adaptation to modern expectations of civilian protection, tracing operational experiences during the 1990s and the consequent operational and institutional innovation.
