*L'Azerbaigian nei documenti diplomatici italiani (1919-1920)* Sep 02 2021 La raccolta presentata in questo volume consiste di una scelta di documenti presenti nell'archivio storico diplomatico del Ministero degli Affari Esteri italiano (ASDMAE) relativi alla Repubblica

democratica dell'Azerbaijan (Azərbaycan Xalq Cümhuriyyəti), uno Stato sorto dalla dissoluzione dell'Impero zarista ed esistente per un breve arco cronologico, dal 28 maggio 1918 al 27 aprile 1920, quando viene conquistato e assorbito dalla Russia bolscevica. I documenti pubblicati in questo lavoro sono per la maggior parte inediti e raccontano la storia di un rapporto molto intenso, politico ed economico, tra l'Italia uscita vincitrice dalla Grande Guerra e l'Azerbaijan che compie in quei mesi i primi passi proprio come nazione indipendente. Vengono inoltre pubblicati per la prima volta i documenti della delegazione azerbaijana alla conferenza della pace di Parigi, che inutilmente cerca di richiamare l'attenzione delle grandi potenze sulla perdita della propria indipendenza. Tra le potenze dell'Intesa l'Italia è forse quella che più si spende per garantire la libertà del giovane Stato caucasico, la prima democrazia parlamentare nel mondo musulmano. Il volume di Pommier Vincelli e Carteny continua la pubblicazione delle fonti italiane in un periodo cruciale come quello del 1918-1920, in cui si sono gettate le basi di una partnership profonda e solida tra i due Paesi, che dura ancora oggi.

**Energy from the Earth** Feb 24 2021 Switzerland's Energy Strategy 2050 requires energy efficiency to be substantially improved, the proportion of fossil fuels in the energy supply to be considerably reduced, and nuclear power to be phased out, while meeting highly ambitious climate protection targets. One of the core implications is the need for a massive increase of the use of renewable sources for electricity generation. In this context, the Swiss Federal Office of Energy (SFOE) estimates that by 2050 deep geothermal energy could contribute 4–5 TWh per year to electricity generation in Switzerland, which would be a substantial contribution to a projected annual power need of 60 TWh. Geothermal energy is attractive because of the very large scale of the resource, its expected relatively low CO<sub>2</sub> emissions, and its reliable, all-day domestic availability. However, the future contribution of deep geothermal energy is subject to major uncertainties: How much of this resource can be exploited and at what economic cost? What are the environmental and risk-related externalities that the public must be willing to bear? How does its overall performance compare to competing energy resources? And will the regulatory framework and public acceptance be sufficient to allow geothermal energy to provide a significant contribution? By way of this major interdisciplinary study, already considered a work of reference, TA-SWISS provides answers to these questions in a comprehensive and balanced way, thereby supplying a sound basis for stakeholder decision-making.

**The Evolution of Global Paper Industry 1800–2050** Sep 14 2022 This book presents an historical analysis of the global paper industry evolution from a comparative perspective. At the centre are 16 producing countries (Finland, Sweden, Norway, the USA, Germany, Canada, Japan, the UK, the Netherlands, Italy, Spain, Portugal, Chile, Brazil, Uruguay and Russia). A comparative study of the paper industry evolution can achieve the following important research objectives. First, we can identify the country specific historical features of paper industry evolution and compare them to the general business trends explicable by existing theoretical knowledge. Second, we can identify and isolate the factors causing both the rise and fall of industrial populations. Third, a shared research agenda can produce an intensive analysis of global industry dynamics. Finally, an extended research period of 250 years can identify what is truly unique in the paper industry evolution and the extent to which it took the same path as other important manufacturing industries.

**Caravaggio** Nov 16 2022 Caravaggio was one of the most important Italian painters of the 17th century. He was, in fact, the wellspring

of Baroque painting. In Hibbard's words, Caravaggio's paintings "speak to us more personally and more poignantly than any others of the time". In this study, Howard Hibbard evaluates the work of Caravaggio: notorious as a painter-assassin, hailed by many as an original interpreter of the scriptures, a man whose exploration of nature has been likened to that of Galileo.

**History of the European Oil and Gas Industry** Jun 18 2020 The history of the European oil and gas industry reflects local as well as global political events, economic constraints and the personal endeavours of individual petroleum geoscientists as much as it does the development of technologies and the underlying geology of the region. The first commercial oil wells in Europe were drilled in Poland in 1853, Romania in 1857, Germany in 1859 and Italy in 1860. The 23 papers in this volume focus on the history and heritage of the oil and gas industry in the key European oil-producing countries from the earliest onshore drilling to its development into the modern industry that we know today. The contributors chronicle the main events and some of the major players that shaped the industry in Europe. The volume also marks several important anniversaries, including 150 years of oil exploration in Poland and Romania, the centenary of the drilling of the first oil well in the UK and 50 years of oil production from onshore Spain.

Oganisation Institutionnelle de la Gestion de L'eau Aux XIXe Et XXe Siecles Jun 30 2021 Water management has become a major issue for public policies at any latitude. How and why this happened could not be assessed efficiently without developing a longitudinal and comparative analysis, such as the one in this book. Institutional arrangements for the provision and the use of water are peculiarly persistent as well as remarkably resilient: This makes them an ideal subject of an historical account. Not that history is worth writing about only when it treats immutable phenomena. On the contrary; its main purpose is to record changes and possibly explain them. But long-lasting continuity urges the scholar to venture into the remote past, since only there are to be discovered the initial causes and the deeper meanings of the institutions under scrutiny. Also, continuity makes the strength of path-dependency all the more evident and consequently underlines the weight of history.

**Liver Growth and Repair** Oct 23 2020 Nelson Fausto The Greek myth of Prometheus with its picture of a vulture feasting on its chained victim has traditionally provided a visual image of liver regeneration. It is a powerful and frightening representation but if one were to substitute the vulture by a surgeon and Prometheus by a patient laying on a properly prepared operating table, the outcome of the procedure would not differ significantly from that described by Greek poets. Yet few of us who work in the field have stopped long enough to ask where this myth originated. Did the poet observe a case of liver regeneration in a human being? Was it brilliant intuition or perhaps, literally, just a

'gut feeling' of a poet looking for good rhymes that led to the prediction that livers grow when part of the tissue is removed?

This book does not attempt to solve these historical issues. It does, instead, cover in detail some of the major modern themes of research on liver regeneration, injury and repair. As indicated in Dr. N. Bucher's chapter, the modern phase of experimental studies on liver regeneration started in 1931 with the publication by Higgins and Anderson of a method to perform a two-thirds resection of the liver of a rat. The technique described has 3 remarkable features: 1) it is highly reproducible, resulting in the removal of 68% of the liver, 2) it has minimal if any mortality, and 3) it consists only of blood vessel ligation and does not involve cutting through or wounding hepatic tissue.

**European Textile Research: Competitiveness Through Innovation** Sep 21 2020 J. IIONEYMAN The second textile and clothing research and development programme (1982-1985) supported by the EEC was undertaken with the prime objective of strengthening the competitiveness of the Community textile industries by stimulating innovation. From the generation of the research ideas through to the application of new technologies, the optimum conditions for scientific research demand highly trained and qualified people working in well-equipped laboratories. The Commission, in collaboration with the textile industries working through Comitextil, participated in the selection of suitable topics and supported the implementation of the programme and the publication and dissemination of the results. In all, 24 institutes in seven member countries carried out the programme which was divided into 35 separate but co-ordinated contracts. The costs were shared equally between the Commission and the participating institutes. The results were presented by selected specialists at the closing symposium held in Luxembourg on the 18 and 19 September 1985. The technical sessions covered the four topics: garment physiology and construction, quality of knitted fabrics and articles, application of new spinning technologies in the wool industry, and the upgrading of linen. In addition, prominent industrialists and Commission officials presented papers concerned with the present situation and the prospects for textile manufacture in the Community. Possible future research topics were outlined and the need was stressed for an increase in the amount of research and development to be carried out.

Made in Italy Apr 09 2022 Made in Italy serves as a comprehensive and rigorous introduction to the history, sociology, and musicology of contemporary Italian popular music. Each essay, written by a leading scholar of Italian music, covers the major figures, styles, and social contexts of pop music in Italy and provides adequate context so readers understand why the figure or genre under discussion is of lasting significance to Italian popular music. The book first presents a general description of the history and background of popular music, followed by essays organized into thematic sections: Themes; Singer-Songwriters; and Stories.

**APM - Archeologia Postmedievale, 18, 2014 - Archeologia dei relitti postmedievali / Archaeology of Post-Medieval Shipwrecks**

Apr 16 2020 Archeologia dei relitti postmedievali / Archaeology of Post-Medieval Shipwrecks, a cura di Carlo Beltrame Il volume, che raccoglie undici contributi di archeologi marittimi di molti paesi, ha l'obiettivo di accendere i riflettori sulle enormi potenzialità dei relitti di età storica, mettendo a confronto, da un lato, approcci diversi (di ambito mediterraneo ma anche statunitense, australiano e nord europeo), dall'altro, contesti archeologici con caratteristiche altrettanto diverse per l'ambiente di giacitura e per l'impiego civile o militare dell'imbarcazione. Gli studi, diacronici ma incentrati sul Cinquecento e sull'Ottocento, coprono le varie sfaccettature dell'indagine storica dei relitti di età postmedievale quali la costruzione navale, il commercio e la vita di bordo, ma anche aspetti di tipo squisitamente metodologico quali l'archeologia sperimentale navale. Si tratta di una novità assoluta per l'editoria scientifica italiana in cui questo particolare, ma molto promettente, ambito della ricerca archeologica non aveva ancora trovato adeguato spazio.

**Environment and Infrastructure** May 18 2020 The material and energy flows that characterized the metabolism of preindustrial and industrial societies were organized through complex infrastructures based on interwoven social and natural elements. Analyzing infrastructures from many methodological and thematic perspectives, the present volume adopts an extensive periodization to identify the undeniable changes caused by industrialization and the persistence of pre-existing features and dynamics. The contributions range from the late Middle Ages to the 1990s and deepen historical characteristics of urban metabolism, the study of energy systems and their transitions, and the management and control of water resources. These reveal the strategies societies and states adopted to transform and adapt their surrounding environment in a constant and challenging equilibrium of diverse interests, whose impact over time has had environmental consequences on a global scale.

A Bridge between Conceptual Frameworks Jul 20 2020 This book analyzes scientific problems within the history of physics, engineering, chemistry, astronomy and medicine, correlated with technological applications in the social context. When and how is tension between disciplines explicitly practised? What is the conceptual bridge between science researches and the organization of technological researches in the development of industrial applications? The authors explain various ways in which the sciences allowed advanced modelling on the one hand, and the development of new technological ideas on the other hand. An emphasis on the role played by mechanisms, production methods and instruments bestows a benefit on historical and scientific discourse: theories, institutions, universities, schools for engineers, social implications as well. Scholars from different traditions discuss the emergency style of thinking in methodology and, in theoretical perspective, aim to gather and re-evaluate the current thinking on this subject. It brings together contributions from leading experts in the field, and gives much-needed insight into the subject from a historical point of view. The volume composition makes for absorbing reading for historians, philosophers and scientists.
