The Construction Industry in the Fourth Industrial Revolution Apr 11 2020 This book gathers papers from the 11th Construction Industry Development Board (cidb) Postgraduate Research Conference, held on 28–30 July 2019 in Johannesburg, South Africa. The conference provided an essential forum for reviewing and generating knowledge on Construction 4.0 and, consequently, highlighted processes and practices that allow us to deliver and operate built environment assets more effectively and efficiently by focusing on physical-to-digital and digital-to-physical transformation. The event addressed three broad themes: Industrial production (prefabrication, 3-D printing and assembly, offsite and advanced manufacturing); Cyber-physical systems (actuators, sensors, IoT, robots and cobots for repetitive and dangerous tasks, and drones for mapping, progress monitoring, safety and quality inspections, lifting, moving and positioning); and Technologies (digital ecosystems, digital platforms, BIM, video and laser scanning, AI and cloud computing, big data and data analytics, reality capture, blockchain, simulation, virtual and augmented reality, data standards and interoperability, and vertical and horizontal integration). Given its scope, the book will be of interest to all construction industry and architectural professionals who want to learn about cutting-edge technologies applied to construction

The Construction Crew Apr 16 2023 A construction crew tears down an old building and builds a new house in its place in this board book featuring bold, vibrant illustrations and an alliterative text. Full color.

Corporate Social Responsibility in the Construction Industry Sep 09 2022 The construction process, right through from planning and design to use and demolition, has a major impact on society. Traditionally, concern has been focused on its environmental impact and the quest for sustainability, but this has now extended into the wider remit of Corporate Social Responsibility (CSR). Essentially, this means that businesses must act (voluntarily) in a socially ethical manner by developing a policy that encompasses the core principles enshrined by CSR. A unique presentation on a topic of emerging importance, Corporate Social Responsibility in the Construction Industry is essential reading for all built environment undergraduate and post-graduate courses, as well as CEOs and senior managers within construction businesses who may be about to embark on developing a CSR strategy.

Construction Management JumpStart Nov 30 2021 Launch your career in construction management with this one-of-a-kind book The construction management industry is expected to increase employment by 16 percent over the next decade. This second edition of a bestselling introduction to construction management walks you through each stage of the construction management process. Written from the constructor's perspective, this

book will familiarize you with all the construction management fundamentals and how Building Information Modeling (BIM) is impacting the construction management profession. Covers interoperability of technology advances in the construction industry Explains how BIM is challenging the traditional approach to project delivery and how this affects the constructor's role Elaborates each stage of the design and construction process and the tasks associated with each of them Shows step-by-step how to estimate project costs, administer contracts, manage job site and construction operations, plan and schedule a project, monitor project performance, manage project quality and safety, and assess project risks Provides review questions at the end of each chapter to help enforce understanding The tried-and-true project management principles presented in this book will help ensure you a successful start to your career.

Builders Jan 01 2022 Building workers constitute between five and ten per cent of the total labour market in almost every country of the world. They construct, repair and maintain the vital physical infrastructure of our societies, and we rely upon and trust their achievements every day. Yet we know surprisingly little about builders, their cultures, the organization of their work or the business relations that constitute their industry. This book, based on one-year's participant observation on a London construction site, redresses this gap in our knowledge by taking a close-up look at a section of building workers and businessmen. By examining the organizational features of the building project and describing the skill, sweat, malingering, humour and humanity of the building workers, Thiel illustrates how the builders were mostly autonomous from formal managerial control, regulating their own outputs and labour markets. This meant that the men's ethnic, class and gender-bound cultural activities fundamentally underpinned the organization of their work and the broader construction economy, and thereby highlights the continuing centrality of class-bound culture and social stratification in a post-industrial, late modern world. Thiel outlines the on-going connections and intersections between economy, state, class and culture, ultimately showing how these factors interrelated to produce the building industry, its builders, and its buildings. Based predominately on cultural and economic sociology, this book will also be of interest to those working in the fields of gender and organizational studies; social class and inequality; migration and ethnicity; urban studies; and social identities.

Construction Workers, U.S.A. Jul 07 2022 A lively, personalized account incorporating objective analysis and solid information accumulated over 42 years, this book presents a graphic picture of the construction industry from an insider's point of view. The volume focuses on the culture of construction workers, the management style of contractors, and the structural and organizational nature of the industry. It considers such unique features of construction as its craft-oriented technology, decentralized decision-making by workers on the job site, and non-bureaucratic methods of field supervision. Using the research of others, government publications, and his own intimate experience in the industry, the author provides an insightful view of a unique industry in modern America. The book opens with an overview of the industry, illustrating how construction is organized, the craft breakdown, and the cultural values of the crafts. It then considers such topics as workers' job satisfaction, craft organization of the work, and the dangerous nature of construction. Separate chapters are devoted to women construction workers, a

recent phenomenon in the industry, and to minorities and the role of affirmative action. In conclusion, the book argues that construction is significant both as a major industry and as a model for organizing work to produce worker satisfaction.

Handbook of OSHA Construction Safety and Health Aug 28 2021 Although the construction industry employs only five percent of the nation's work force, it suffers 20 percent of the nation's occupational fatalities and 12 percent of all U.S. injuries. Because of this the Occupational Safety and Health Administration (OSHA) has consolidated their construction standards, compliance assistance, cooperative programs, and technical services to form the Directorate of Construction. Construction sites and operations have become the prime targets for the Directorate of Construction, which has greatly increased its number of inspections, citations and penalties. The Handbook of OSHA Construction Safety and Health is for safety professional, contractor, project manager and owner who has the responsibility of implementing an effective on-site safety and health program. These professionals are now in charge of everything from the safe operation of equipment to the safe removal of hazardous waste from the construction site. It is a practical guide that can be used by the construction industry on existing and future projects and jobsites in the critical area of occupational safety and health. Written using OSHA's Construction standards as a framework, the book provides those responsible for construction safety and health with a definitive guide for eliminating safety and health hazards from construction worksites. In addition, the handbook addresses subjects such as contractor liability, multi-employer sites and focused inspection which are real and time problem areas faced by the construction industry. The Handbook of OSHA Construction Safety and Health contains a model safety and health program, examples of accident analysis and prevention approaches, sample safety and health checklist and forms, and over 300 illustrations.

Let's Meet a Construction Worker May 17 2023 What do construction workers do? Some lucky kids are about to find out! They visit Mr. Moore, a construction worker who's helping to build a new school. Every illustrated scene includes 8 easy-to-lift flaps, and each puzzle is specially created for younger children to help develop early skills in vocabulary, concentration and attention to detail.

Potential Efficiency Gains in the Construction Industry from the Proper Use of Information Technology Jun 13 2020 For many years, technological advances and new software have altered the face of the engineering design sector. Design companies have realized incredible efficiency gains and cost savings due to these improvements, but the construction sector has not been able to do the same. Unlike design firms, contractor businesses as a whole have not embraced IT advancements and taken steps to implement them across all types of construction projects in the most efficient and effective manner possible. Because of this half-hearted attitude towards technological improvements, the same efficiency gains and cost savings found in the design sector have not been attained in the construction sector. The thesis examines different types of IT advancements that have the potential to seriously benefit the construction sector, including electronic document management, 3D modeling, construction sequencing, and laser scanning. Several surveys performed by other engineers and academics interested in the field of information technology in the engineering and construction sector will be examined, and the results of these will provide the basis for discussion regarding the current state of IT saturation in the construction sector as well as its overall effectiveness in providing tangible benefits to users. In addition, this thesis also examines possible reasons for why these benefits are not being attained and offers some ideas and strategies that may improve the implementation of IT advancements in the construction industry.

Social Enterprise in the Construction Industry Sep 28 2021 Through the emerging lens of social enterprise, this book examines how the global construction industry can engage more effectively with the communities in which it builds, addressing disadvantage and environmental degradation to leave a positive legacy for future generations. Combining insights from leading research and real-life case studies of social enterprise in the construction sector, the result is a practical framework which will help social enterprises, clients, consultants and construction firms work collectively to build a thriving social enterprise sector. Readers of this timely book will learn to embrace social enterprise and an important new sector in the global construction industry. They will learn to see community involvement as an opportunity rather than a risk, and fully understand the broader role they can play in building a fairer and more sustainable society.

The Connectivity of Innovation in the Construction Industry Nov 11 2022 The

construction industry is currently experiencing accelerating developments concerning societal demands along with project complexity, internationalization and digitalization. In an attempt to grasp the consequences of these demands on productivity and innovation, this edited book addresses how innovation is likely to take place with a more long-term perspective on the construction sector. While existing literature focuses on organizational discontinuity and fragmentation as the main reasons for the apparent lack of innovation in the industry, this book highlights the connectivity of construction actors, resources and activities as fundamental for understanding how innovation takes place. Through 15 empirically grounded chapters, the book shows how innovation is part of construction processes on various levels, including project, firm and industry, and that these innovation processes are characterized by organizational and technological connectivity over time. Written by European business management scholars, the chapters cover empirical cases and examples from both a multi-organizational and a multi-international perspective in terms of covering the viewpoints of different industry actors and the contexts of several different European countries including: Sweden, Norway, the UK, Italy, France, Hungary and Poland. By illustrating how connectivity is part of innovation processes in the creation of single-product innovations, of various innovations within and across projects, as well as a fundamental aspect of the processes in which innovations cross nations, the book provides a new angle on how to understand construction innovation and where the industry might (or needs to) be heading next. This book is essential reading for anyone interested in construction management, project management, engineering management, innovation studies, business and management studies.

Contractual Procedures in the Construction Industry Mar 23 2021 Contractual Procedures in the Construction Industry 7th edition aims to provide students with a comprehensive understanding of the subject, and reinforces the changes that are taking place within the construction industry. The book looks at contract law within the context of construction contracts, it examines the different procurement routes that have evolved over time and the particular aspects relating to design and construction, lean methods of construction and the advantages and disadvantages of PFI/PPP and its variants. It covers the development of partnering, supply chain management, design and build and the way that the clients and professions have adapted to change in the procurement of buildings and engineering projects. This book is an indispensable companion for students taking undergraduate courses in Building and Surveying, Quantity Surveying, Construction Management and Project Management. It is also suitable for students on HND/C courses in Building and Construction Management as well as foundation degree courses in Building and Construction Management. Key features of the new edition include: A revised chapter covering the concept of value for money in line with the greater emphasis on added value throughout the industry today. A new chapter covering developments in information technology applications (building information modelling, blockchains, data analytics, smart contracts and others) and construction procurement. Deeper coverage of the strategies that need to be considered in respect of contract selection. Improved discussion of sustainability and the increasing importance of resilience in the built environment. Concise descriptions of some the more important construction case laws.

Understanding IT in Construction Jan 13 2023 In recent years, Information Technology (IT) has been transforming business practice in many sectors resulting in efficiency gains and improved services for the client. The construction industry lags behind other manufacturing and service industries in adopting the new technology. To promote the wider use of IT in construction, it is essential to equip practitioners and graduates of construction related disciplines with knowledge of existing construction IT applications. This book provides an overview of a broad range of IT applications currently available for all stages throughout the life cycle of a building project, from essential office and information management through to computer-aided design (CAD), cost estimating, project planning and scheduling, and facilities management and building maintenance. It is an invaluable and handy reference for construction professionals and clients, as well as being a clear and comprehensive text for students studying construction, building or architectural courses.

The Construction Chart Book Feb 02 2022 The Construction Chart Book presents the most complete data available on all facets of the U.S. construction industry: economic, demographic, employment/income, education/training, and safety and health issues. Making Sense of Construction Improvement Jan 21 2021 The book sets out deliberately to challenge the current construction improvement debate and the way in which it is conducted. It confronts the supposedly neutral nature of construction 'best practice' and demonstrates that that the advocated recipes seldom stand up to critical scrutiny. It further argues that commonly accepted components of best practice such as lean construction, partnering and collaborative working rarely live up to the claims made on their behalf. Such recipes invariably suffer from definitional vagueness, and are constantly reinterpreted to suit the needs the different audiences. *Making Sense of Construction Improvement* argues that construction sector improvement techniques cannot be understood in terms of their substantive content, and are best understood in terms of the rhetoric within which they are presented. The author also contends that the persuasiveness of such recipes depends upon the extent to which practitioners can adopt them for the purposes of making sense of the changes they observe happening around them. To be accepted as 'best practice' construction improvement techniques must also resonate with broader agendas of socio-technological change. The author charts how the best practice debate has developed from the aftermath of the Second World War through

to the election of David Cameron's coalition government in 2010. Attention is given to the way in which the improvement debate throughout the 1960s and 70s was shaped by the broader aspirations of the post-war social consensus and the associated desire for a centrally planned economy. Attention thereafter is given to the way the construction sector was radically re-shaped by the advent of the enterprise culture. The privatisation of the sector's client base, coupled with the withdrawal of the state as a provider of mass housing, caused a significant and long-lasting shift in the construction landscape. Private sector clients similarly experienced extensive downsizing while outsourcing their procurement capabilities. Such strategies were frequently justified by mobilising the rhetoric of business process re-engineering (BPR). Contracting firms simultaneously faced unpredictable workloads and increasing market competition. In response, the sector at large chose to base their competitive advantage on leanness and agility. Hence the emergence of the hollowed-out firm as the dominant form of organising. These structural trends combined to provide the backcloth to the industry improvement agenda throughout the 1980s and 1990s. *Making Sense of Construction Improvement* argues that the popularity of improvement recipes such as partnering, collaborative working and integrated teams can be understood as strategies for overcoming the loss of control associated with downsizing and outsourcing. In contrast to other textbooks, *Making Sense of Construction Improvement* does not offer advice on how to manage construction projects more effectively; the aim is rather to understand the forces which have shaped the construction sector improvement agenda over time.

Leadership in the Construction Industry Oct 30 2021 This book presents a new framework for leadership in the construction industry which draws from the authentic leadership construct. The framework has three major themes: self-leadership, self-transcendent leadership, and sustainable leadership. Despite its significance, leadership has not been given due importance in the construction industry as focus is placed on managerial functionalism. At the project level, even with the technological advances in the industry in recent years, construction is realized in the form of people undertaking distinct interdependent activities which require effective leadership. The industry faces many challenges including: demanding client requirements and project parameters; more stringent regulations, codes and systems; intense competition in the industry; and threats from disruptive enterprise. In such a complex environment, technology-driven and tool-based project and corporate management is insufficient. It must be complemented by a strategic, genuine, stakeholder-focused and ethical leadership. Leadership in the Construction Industry is based on a study on authentic leadership and its development in Singapore. Leadership theories and concepts are reviewed; the importance of leadership in the construction industry is discussed; and the grounded theory approach which was applied in the study is explained. Many eminent construction professionals in Singapore were interviewed in the field study. Emerging from the experiences of the leaders documented in this book are three major themes: (1) self-leadership: how leaders engage in various self-related processes such as self-awareness, self-regulation, and role modeling. (2) self-transcendent leadership: how leaders go beyond leading themselves to leading others through servant leadership, shared leadership, spiritual leadership, and socially-responsible leadership; and, finally, (3) sustainable leadership or the strategies

leaders employ to make the impact of their leadership lasting. A synthesis of these themes and their implications for leadership development is presented before the book concludes with some recommendations for current and aspiring leaders about how they can engage with them. This book is essential reading for all construction practitioners from all backgrounds; and researchers on leadership and management in construction.

Social Value in Construction Oct 18 2020 While the concept of social value is not new, recent interest in social value in construction has grown because of new social procurement legislation around the world and an increasing acceptance of the need to ensure construction projects provide social value, rather than simply economic value. Despite this growing recognition, literature and professional guidance on the subject is hard to find. This is the first book looking at social value in construction and it sets the agenda by asking and answering important questions like: How is the construction industry developing and supporting social enterprise and social value and for who? How and when is the industry recording and measuring social value and its effect? Which organisations are doing things well and what can we learn from their experiences? What can industry players do together to consolidate efforts and drive improvements? What are the key challenges in the field and what does the future look like? Drawing on a variety of professional and academic experiences and disciplines, the authors present global perspectives and lay the foundations for creating social value in the construction industry. This timely book makes use of real-life case studies and examples of best practice to demonstrate how innovative companies can utilise contemporary research to create social value through their projects. It is time the construction industry viewed community involvement and corporate social responsibility as an opportunity rather than a risk, and this is the book that shows the industry how. This is essential reading for all professionals in the construction, engineering, architecture and built environment sector. In particular, project managers, clients, contract managers, quantity surveyors, CSR and HR personnel will gain a lot from reading this book.
