Psychogeography May 28 2021 Provocateurs Will Self and Ralph Steadman join forces in this post-millennial meditation on the vexed relationship between psyche and place in a globalised world, bringing together for the first time the very best of their ‘Psychogeography’ columns for the Independent. The introduction, ‘Walking to New York’, is both a prelude to the verbal and visual essays that make up this extraordinary collaboration, and a revealing exploration of the split in Self’s Jewish-American-British psyche and its relationship to the political geography of the post-9/11 world. Ranging from the Scottish Highlands to Istanbul and from Morocco to Ohio, Will Self’s engaging and disturbing vision is perfectly counter-pointed by Ralph Steadman’s edgy and beautiful artwork.

Insect Diapause Jul 30 2021 Our highly seasonal world restricts insect activity to brief portions of the year. This feature necessitates a sophisticated interpretation of seasonal changes and enactment of mechanisms for bringing development to a halt and then reinitiating it when the inimical season is past. The dormant state of diapause serves to bridge the unfavourable seasons, and its timing provides a powerful mechanism for synchronizing insect development. This book explores how seasonal signals are monitored and used by insects to enact specific molecular pathways that generate the diapause phenotype. The broad perspective offered here scales from the ecological to the molecular and thus provides a comprehensive view of this exciting and vibrant research field, offering insights on topics ranging from pest management, evolution, speciation, climate change and disease transmission, to human health, as well as analogies with other forms of invertebrate dormancy and mammalian hibernation.

Methods of Electronic Structure Theory Jul 18 2020 These two volumes deal with the quantum theory of the electronic structure of molecules. Implicit in the term *ab initio* is the notion that approximate solutions of Schrödinger’s equation are sought “from the beginning,” i. e., without recourse to experimental data. From a more pragmatic viewpoint, the distinguishing feature of *ab initio* theory is usually the fact that no approximations are involved in the evaluation of the required molecular integrals. Consistent with current activity in the field, the first of these two volumes contains chapters dealing with methods *per se*, while the second concerns the application of these methods to problems of chemical interest. In asense, the motivation for these volumes has been the spectacular recent success of *ab initio* theory in resolving important chemical questions. However, these applications have only become possible through the less visible but equally important efforts of those developing new theoretical and computational methods and models. In the book’s forward, iconic photographer Elliott Erwin writes, “Good photographs are tough enough to shoot. Really funny ones are even harder. Good and funny photographs observed in nature not arranged or manipulated but simply observed in real time with amazing consistency, constitute a minor miracle now presented in Mr. Semetko’s book. . . . In my book, he is the essential photographer. That is, the one who sees what others could not have seen.” Inspired by Cartier-Bresson, Robert Frank, and Elliott Erwitt, Craig Semetko is a collector of the spontaneous moment. I, Tokyo Apr 26 2021 Magnum photographer Jacob Aue Sobol moved to Tokyo in Spring 2006. He began photographing in the streets and public areas, drawn to the tightly confined reality of the city. His search was for the individual human being in an environment simultaneously attractive and repellent. He hung out with the rent boys in Kabukicho, the red light district. He visited the homeless sleeping in the streets and the parks. Most of all, he sought to understand Japanese youth, the generation which lacks any connection to traditional Japanese culture and values.

Matter and Mind Apr 19 2023 This book discusses two of the oldest and hardest problems in both science and philosophy: What is matter?, and What is mind? A reason for tackling both problems in a single book is that two of the most influential views in modern philosophy are that the universe is mental (idealism), and that the everything real is material (materialism). Most of the thinkers who espouse a materialist view of mind have obsolete ideas about matter, whereas those who claim that science supports idealism have not explained how the universe could have existed before humans emerged. Besides, both groups tend to ignore the other levels of existence—chemical, biological, social, and technological. If such levels and the concomitant emergence processes are ignored, the physicalism/spiritualism dilemma remains unsolved, whereas if they are included, the alleged mysteries are shown to be problems that science is treating successfully.
