Wife of the Chef May 27 2021 Wife of the Chef is at once a no-holds-barred memoir of restaurant life and a revealing look at married life. For Courtney Febroriello, the two are intertwined. She and her husband own an American bistro in Connecticut. He's the chef, so naturally he gets all the credit. She has the role

of keeping things running, but she's the wife, so she remains anonymous or invisible or both. Febroriello comes front and center here, detailing the everyday challenges she faces—taking over dish-washing duty, bailing waiters out of jail, untangling the immigration laws, cajoling lazy suppliers, handling unreasonable customers, and a host of other emergency duties. She pokes fun at people who take food and wine—and the chef—too seriously, with witty comments on everything from "chef envy" to the much-ballyhooed James Beard Awards. Spiced with a healthy spoonful of feminism and enriched with a cup of humor, *Wife of the Chef* is the tastiest "dish" of the season.

The Encyclopedia of Martial Arts Movies Oct 20 2020 The Encyclopedia covers the genre from 1920 to 1994. The genre, however, can be very

confusing: films often have several titles, and many of the stars have more than one pseudonym. In an effort to clarify some of the confusion, the authors have included all the information available to them on almost 3,300 films. Each entry includes a listing of the production company, the cast and crew, distributors, running times, reviews with star ratings whenever possible, and alternate film titles. A list of film series and one of the stars' pseudonyms, in addition to a 7,900 name index, are also included. Illustrated.

Plutopia Apr 13 2020 While many transnational histories of the nuclear arms race have been written, Kate Brown provides the first definitive account of the great plutonium disasters of the United States and the Soviet Union. In *Plutopia*, Brown draws on official records and dozens of interviews to tell the extraordinary stories of Richland, Washington and Ozersk, Russia--the first two cities in the world to produce

plutonium. To contain secrets, American and Soviet leaders created plutopias--communities of nuclear families living in highly-subsidized, limited-access atomic cities. Fully employed and medically monitored, the residents of Richland and Ozersk enjoyed all the pleasures of consumer society, while nearby, migrants, prisoners, and soldiers were banned from plutopia--they lived in temporary "staging grounds" and often performed the most dangerous work at the plant. Brown shows that the plants' segregation of permanent and temporary workers and of nuclear and non-nuclear zones created a bubble of immunity, where dumps and accidents were glossed over and plant managers freely embezzled and polluted. In four decades, the Hanford plant near Richland and the Maiak plant near Ozersk each issued at least 200 million curies of radioactive isotopes into the surrounding environment--equating four Chernobyls--laying waste to hundreds of square miles and contaminating

rivers, fields, forests, and food supplies. Because of the decades of secrecy, downwind and downriver neighbors of the plutonium plants had difficulty proving what they suspected, that the rash of illnesses, cancers, and birth defects in their communities were caused by the plants' radioactive emissions. Plutopia was successful because in its zoned-off isolation it appeared to deliver the promises of the American dream and Soviet communism; in reality, it concealed disasters that remain highly unstable and threatening today. An untold and profoundly important piece of Cold War history, Plutopia invites readers to consider the nuclear footprint left by the arms race and the enormous price of paying for it.

Manuals Combined: U.S. Marine Corps Basic Reconnaissance Course (BRC)

References Nov 13 2022 Over 5,300 total pages MARINE RECON Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air-Ground Task Force, reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace, while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include, but are not limited to: Plan, coordinate, and conduct amphibious-ground reconnaissance and surveillance to observe, identify, and report enemy activity, and collect other information of military significance. Conduct specialized

surveying to include: underwater reconnaissance and/or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones (LZ), parachute drop zones (DZ), aircraft forward operating sites, and mechanized reconnaissance missions. When properly task organized with other forces, equipment or personnel, assist in specialized engineer, radio, and other special reconnaissance missions. Infiltrate mission areas by necessary means to include: surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air-delivery, and re-supply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of precision-guided munitions. Conduct post-strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct limited scale raids and

ambushes. For those seeking a straight life, it describes what they must change about themselves, and the hazards they must avoid. For anyone interested in crime, punishment, and rehabilitation, it provides an unprecedented look into the minds of offenders. Bluntly acknowledges the existence of unfairness and hypocrisy in society, but not with bitterness or self-pity. Rather it puts these in perspective and shows how the individual offender CAN change and build a respectable life, in spite of the barriers and pitfalls. The author has seen criminal justice and corrections all the way from the cold floor of a solitary cell to the courtroom as an expert witness. Without mincing words and with a touch of humor, he turns this experience to the service of both the offender and society as a whole. (Personal note: Today is November 28, 2010, so GOING STRAIGHT... has been available for almost ten years. I've received numerous letters and emails from readers, telling how they've used it to help themselves

and others. Not a single one has told me that he or she considered it a waste of time and money. Whatever your own situation, whether you're in a cell sweating out a parole hearing, or a corrections officer, or teacher, or you care for someone trapped in a criminal lifestyle, or an activist pushing for more rehabilitation-oriented corrections, or interested for any other reason, I sincerely hope you also find this book helpful. My main interest is not the royalties -- they just help offset SOME of the cost of my websites and other rehabilitation efforts. My goal is to know, when it's my time to leave this world, that there are a few people whose lives are better because I was here. PKF)

current state of knowledge and provides an up-to-date synthesis of the most basic concepts. It is an indispensable working tool not only for geophysicists and geophysics students but also for geologists, physicists, atmospheric and environmental scientists, and engineers.

How We Did It May 19 2023 This booklet is a simplified quick reference guide to positive reform for 16-25-year-olds with a history of delinquency or criminal offending. The steps provided were collected from decades of studies of ex-offenders who managed to transform their lives for good. The author is an ex-juvenile offender who processed through her own positive reform and went onto achieve her doctorate in forensic psychology. She combines first-hand experience with in-depth research to reach back and coach young people who may doubt their potential for prosocial success. The guide is split into three parts. The reader will find a brief introduction to desistance research in Part I, a summary of the research-based

desistance process in Part II, and research-based reflection questions to support young people as they begin to think through and prepare for positive reform in Part III.

The Jepson Manual Dec 14 2022 "California's extraordinary flora is described in contemporary detail in this handy volume, which should prove an inspiration to all of those interested in these plants, their habitats, and their importance to a state richer in botanical diversity than any other part of the United States. This is a thorough revision of an indispensable book."—Peter H. Raven, Missouri Botanical Garden "This second edition of The Jepson Manual is a monumental achievement! Far more than a simple update, the book has gone through a thorough revision, making it a must-have book for California plant enthusiasts—professional and lay alike."—Lucinda McDade, Rancho Santa Ana Botanic Garden "Biogeographers, vegetation ecologists, and practitioners of conservation and restoration will all welcome the second edition of

the Jepson Manual. Many improvements in this second edition include major taxonomic name changes, more information on habitat/range/phenology, better keys, and new illustrations. The second edition is more user-friendly, accurate, and scientifically rigorous. And these improvements are exactly the kind of recent, authoritative, and trusted flora needed."—Michael G. Ownership and Exploitation of Land and Natural Resources in the Roman World Aug 30 2021 Explanation of the success and failure of the Roman economy is one of the most important problems in economic history. As an economic system capable of sustaining high production and consumption levels, it was unparalleled until the early modern period. This volume focuses on how the institutional structure of the Roman Empire affected economic performance both positively and negatively. An international range of contributors offers a variety of approaches

that together enhance our understanding of how different ownership rights and various modes of organization and exploitation facilitated or prevented the use of land and natural resources in the production process. Relying on a large array of resources - literary, legal, epigraphic, papyrological, numismatic, and archaeological - chapters address key questions regarding the foundations of the Roman Empire's economic system. Questions of growth, concentration and legal status of property (private, public, or imperial), the role of the state, content and limitations of rights of ownership, water rights and management, exploitation of indigenous populations, and many more receive new and original analyses that make this book a significant step forward to understanding what made the economic achievements of the Roman empire possible.

Advanced Power Generation Systems Jul 09 2022 **Advanced Power Generation Systems** examines the full range of advanced multiple output thermodynamic cycles that can enable more sustainable and efficient power production from traditional methods, as well as driving the significant gains available from renewable

sources. These advanced cycles can harness the by-products of one power generation effort, such as electricity production, to simultaneously create additional energy outputs, such as heat or refrigeration. Gas turbine-based, and industrial waste heat recovery-based combined, cogeneration, and trigeneration cycles are considered in depth, along with Syngas combustion engines, hybrid SOFC/gas turbine engines, and other thermodynamically efficient and environmentally conscious generation technologies. The uses of solar power, biomass, hydrogen, and fuel cells in advanced power generation are considered, within both hybrid and dedicated systems. The detailed energy and exergy analysis of each type of system provided by globally recognized author Dr. Ibrahim Dincer will inform effective and efficient design choices, while emphasizing the pivotal role of new methodologies and models for performance assessment of existing systems. This unique resource gathers information from

thermodynamics, fluid mechanics, heat transfer, and energy system design to provide a single-source guide to solving practical power engineering problems. The only complete source of info on the whole array of multiple output thermodynamic cycles, covering all the design options for environmentally-conscious combined production of electric power, heat, and refrigeration Offers crucial instruction on realizing more efficiency in traditional power generation systems, and on implementing renewable technologies, including solar, hydrogen, fuel cells, and biomass Each cycle description clarified through schematic diagrams, and linked to sustainable development scenarios through detailed energy, exergy, and efficiency analyses Case studies and examples demonstrate how novel systems and performance assessment methods function in practice

Manual for Survival: A Chernobyl Guide to the Future Apr 18 2023 A chilling exposé of the international effort to minimize the health and environmental consequences of nuclear radiation in the wake of Chernobyl. Dear Comrades! Since the accident at the Chernobyl power plant, there has been a detailed analysis

of the radioactivity of the food and territory of your population point. The results show that living and working in your village will cause no harm to adults or children. So began a pamphlet issued by the Ukrainian Ministry of Health—which, despite its optimistic beginnings, went on to warn its readers against consuming local milk, berries, or mushrooms, or going into the surrounding forest. This was only one of many misleading bureaucratic manuals that, with apparent good intentions, seriously underestimated the far-reaching consequences of the Chernobyl nuclear catastrophe. After 1991, international organizations from the Red Cross to Greenpeace sought to help the victims, yet found themselves stymied by post-Soviet political circumstances they did not understand. International diplomats and scientists allied to the nuclear industry evaded or denied the fact of a wide-scale public health disaster caused by radiation exposure. Efforts to spin the story about Chernobyl were largely successful; the

official death toll ranges between thirty-one and fifty-four people. In reality, radiation exposure from the disaster caused between 35,000 and 150,000 deaths in Ukraine alone. No major international study tallied the damage, leaving Japanese leaders to repeat many of the same mistakes after the Fukushima nuclear disaster in 2011. Drawing on a decade of archival research and on-the-ground interviews in Ukraine, Russia, and Belarus, Kate Brown unveils the full breadth of the devastation and the whitewash that followed. Her findings make clear the irreversible impact of man-made radioactivity on every living thing; and hauntingly, they force us to confront the untold legacy of decades of weapons-testing and other nuclear incidents, and the fact that we are emerging into a future for which the survival manual has yet to be written.

[Barriers to Employment for Offenders and Ex-offenders](#) Feb 21 2021 This research explores the evidence on the level, pattern and causes of unemployment among people with a criminal

record (PwCR) in the UK, with a focus on the recruitment stage of the hiring process and the impact of knowledge of a criminal record on the decision to employ. The Police Act of 1977 introduced 'Basic Disclosure' which authorised employers, with the consent of the individual, to access information on job applicants' and employees' criminal records. A new piece of legislation, the Rehabilitation of Offenders Act, soon to come into force, will alter that ability, and for some PwCR, the Act will allow them to put their criminal record entirely behind them. The causes of unemployment among PwCRs is assumed to be high. However research shows that part of this group - those in prison, and those under probation supervision - exhibit characteristics associated with employment difficulties, such as low qualifications and drug and alcohol abuse. Irrespective of criminal record, this group would be expected to suffer above average levels of unemployment. What impact, then, does the criminal record alone

have?
