Economics for Business focuses on three essential branches of modern economics: competition and the market system; macroeconomics and the economics of openness and globalisation, including the analysis of international trade, foreign investment and exchange rates. The book has a very strong business focus and has been used in the UK on many MBA courses as well as short, often one semester post experience executive courses. It has also proved popular for undergraduate business economics courses.

The book examines economics from a business perspective and is selective in its coverage, focusing on setting out the big picture and including topics on the basis that they throw light on issues relevant to business. It has a strong policy perspective. Economic issues are analysed in a policy context, which helps students see the relevance of economics to business decisions. The book adopts a modern approach to macroeconomics, as appropriate for business students, and pays special attention to globalisation, trade liberalisation, economic integration and exchange rates. Frequent business insights throughout each chapter reinforce the business relevance of economic theories, bringing them to life every step of the way. Particular support is provided for mathematical concepts: assuming no prior knowledge, the book walks students through the maths to develop their confidence in tackling quantitative material, before asking them to apply what they've just learned to real business data. Nobel-Prize-winning economist Paul Krugman argues that business leaders need to understand the differences between economic policy on the national and international scale and business strategy on the organizational scale. Economists deal with the closed system of a national economy, whereas executives live in the open-system world of business. Moreover, economists know that an economy must be run on the basis of general principles, but businesspeople are forever in search of the particular brilliant strategy. Krugman's article serves to elucidate the world of economics for businesspeople who are so close to it and yet are continually frustrated by what they see.
