Low Carbon Development: Key Issues is the first comprehensive textbook to address the interface between international development and climate change in a carbon constrained world. It discusses the key conceptual, empirical and policy-related issues of low carbon development and takes an international and interdisciplinary approach to the subject by drawing on insights from across the natural sciences and social sciences whilst embedding the discussion in a global context. The first part explores the concept of low carbon development and explains the need for low carbon development in a carbon constrained world. The book then discusses the key issues of socio-economic, political and technological nature for low carbon development, exploring topics such as the political economy, social justice, financing and carbon markets, and technologies and innovation for low carbon development. This is followed by key issues for low carbon development in policy and practice, which is presented based on cross-cutting issues such as low carbon energy, forestry, agriculture and transportation. Afterwards, practical case studies are discussed from low carbon development in low income countries in Africa, middle income countries in Asia and Latin America and high income countries in Europe and North America. Written by an international team of leading academics and practitioners in the field of low carbon development, this book is essential reading for students, academics, professionals and policy-makers interested in the fields of low carbon development, climate change mitigation, climate policy, climate change and development, global environmental change, and environment and development.

The Common Security and Defence Policy (CSDP) has come a long way since its inception as the European Security and Defence Identity under NATO. Yet more than a decade after emerging as an autonomous entity, with its own capacity for civilian crisis management and military action, the European Union's CSDP is still very much a work in progress. This fully revised and updated new edition provides the most comprehensive account available of the CSDP and the debates surrounding it. Written by a leading authority in the field, the second edition draws on the author's own extensive research in the area, including hundreds of interviews with key actors, and takes account of developments since the reforms of the Lisbon Treaty. A brand new chapter

assesses international relations theory and European integration theory as tools to understand the CSDP, and critically engages with theoretical approaches that view security and defence policy as the exclusive domain of sovereign nation-states. The book concludes with an analysis of future hurdles for the European Union as it responds to new and often unpredictable crises across the globe.

(1-2). This volume offers interdisciplinary perspectives on the historical, cultural, and traditional inferences, inner-logic, and intricacies of democratic politics and elections in Nagaland. It goes beyond 'institutional analyses' of democratic structures and governance by looking at the troubled historical context in which modern democracy was introduced, how Nagas themselves view democracy, the reasoning they adopt as they engage in campaigns and perform elections, the remapping of traditional practices and values unto the new democratic playing field, and at the gender and 'clean elections' debates such practices evoke. This book examines the role of migration as a livelihood strategy in influencing food access among rural households. Migration forms a key component of livelihoods for an increasing number of rural households in many developing countries. Importantly, there is now a growing consensus among academics and policymakers on the potential positive effects of migration in promoting human development. Concurrently, the significance of food security as an important development objective has grown tremendously, and the Sustainable Development Goals agenda envisages eliminating all forms of malnutrition. However, the academic and policy discussions on these two issues have largely proceeded in silos, with little attention devoted to the relationship they bear with each other. Using the conceptual frameworks of 'entitlements' and 'sustainable livelihoods', this book seeks to fill this gap in the context of India - country with the most food-insecure people in the world and where migration is integral to rural livelihoods. Drawing on an international survey of over 1,000 business and executives, this book provides a management perspective on cloud technology. It outlines the need to know information for strategic decisions on cloud technology including its capabilities, how it can be implemented securely and the way forward for the next ten years.
