The success of this multiplication math workbook stems from focused organization (see below). The answers to all of the exercises can be checked with a key at the back. The facts are introduced one at a time. Mixed practice begins with 0 thru 5 to help develop confidence. The next section pairs 4-9 with 0-5. A separate section is dedicated to 4-9 times 4-9. These are important facts with which most students tend to struggle. At this stage, students are ready for mixed exercises with 0-9. Since 0 and 1 are very easy, the following section mixes 2-9 only. If the number of pages he has read is  $\frac{2}{5}$  less than the number of pages he has not read yet, how many pages does the book have? Reasoning and solution: From "the number of pages he has read is  $\frac{2}{5}$  less than the number of pages he has not read yet", we know that the number of pages he has not read yet ( the noun phrase after the word "than") is the amount in 1 whole and

the number of pages he has read is in a fractional part that is  $\frac{2}{5}$  less than the fractional part the number of pages he has not read yet is in, 1, so the number of pages he has read is in a fractional part that is  $\frac{2}{5}$  less than 1 or is  $(1-\frac{2}{5})$  or is  $\frac{3}{5}$  of 1 whole. He has read 120 pages so we divide  $\frac{3}{5}$  into the amount in it, 120, to find the amount in 1 whole, the number of pages he has not read yet:  $120 \div \frac{3}{5} = 120 \times \frac{5}{3} = 200$  pages. The number of pages that he has not read is 200 pages. ...The techniques and strategies on using algebraic equations to solve word problems and on solving proportions, surface area, volume and area of lateral surface of cylinders and cones are also reviewed in the book.
