If the very thought of budgets pushes your sanity over the limit, then this practical, easy-to-use guide is just what you need. Budgeting Basics and Beyond, Third Edition equips you with an all-in-one resource guaranteed to make the budgeting process easier, less stressful, and more effective. Written by Jae Shim and Joel Siegel, the new edition covers Balanced Scorecard, budgeting for nonprofit organizations, business simulations for executive and management training, and much more! Capital budgeting is an important part of the financial management of a business organization. It is a process that business houses use to evaluate an investment proj- ect. The

decision of whether to accept or deny an investment project is capital budgeting decision. Capital budgeting is important because it determines the long-term economic and financial profitability of any investment project. It lays down the future success of a business. Capital Budgeting aims to develop not only an understanding of the concepts of capital budgeting but also to provide its practical application to help students learn both theory and practice of capital budgeting used in the financial management of a business organization. It analyzes the capital budgeting practices of corporate enterprises in India in diverse sectors, on comparative basis, in order to provide the reader a better insight into the various issues and challenges regarding capital budgeting management. This textbook offers an approachable guide to all key concepts within corporate finance. Emphasizing the use of common sense rather than number-crunching models, it provides a compact, easy to read experience for any reader, practitioners and students alike, whatever their background. A Practical Guide to Corporate Finance begins with the basics of how to read financial statements and how to estimate future cash flows. It also includes a guide to subjects such as capital budgeting decisions, the cost of financing for businesses, cash and working capital management, the process of business valuation, and how stock markets work. This textbook breaks the financial ice by offering real, practical advice, helping the reader to avoid common pitfalls, and translate the 'financialese', or business jargon that can cause confusion for those without a financial or banking background. Every chapter features real-life applications, and is punctuated with mini case studies in the form of a 'Slice of Life' and numerous dialogues that help shape the comprehension of the reader. In essence, this key volume covers the fundamentals of capital budgeting. Of particular interest to practising managers on executive training courses, its readers will quickly be able to make capital budgeting decisions for any corporation. November 2006 Providing a balanced and practical approach to capital management and budgeting, this book covers the full spectrum of capital investments, from the basics through the latest innovations. It is aimed at managers who are involved in capital investment decisions: setting company capital investment policy; performing project analyses; and drafting recommendations. Those in top management will benefit from discussions of strong and weak points of various methods and

concepts. Included in the arsenal of capital investment tools in this book are concepts of proven usefulness, such as the MAPI method, no longer available in other works on the topic of capital budgeting, and other topics not covered elsewhere, such as abandonment analysis. The primary contribution of this book is to integrate the important disciplines which simultaneously impact the investment appraisal process. The book presents a study that develops a new approach to investment appraisal which uses a multiple objective linear programming (MOLP) model to integrate the selected disciplines which include capital markets, corporate governance and capital budgeting. The research covers two case studies, one in the e-commerce sector and another in the airline industry in which the above disciplines are integrated. Readers from the areas of corporate governance, regulation, and accounting would find the survey of different approaches and the new integrated optimization approach particularly useful. This book is companion to Volumes I and III in the series. Volume I covers managing strategy through capital project portfolios; Volume III is a complete case study. This volume describes the strategic challenge of adding real economic value, properly and rigorously defined. The author explains how this is accomplished through the capital budgeting process; discusses the importance of free cash flow and finally, capital projects, as financial options, are discussed, as a way to manage risk while enhancing the likelihood of project approval. The author is a retired business professor; his research interest has been the management of technology and innovation. For this book, he double-checked none of the 1,250 media items collected, accepting their overall veracity at face value. This approach advocates no one person, no one company, no one technology, and no portion of the global automobile industry. Analysis and practical application came foremost. volume to the classic *The Capital Budgeting Decision*. Exploring this key topic in corporate finance the authors examine the complexities of capital budgeting as well as the opportunities to improve the decision process where risk and time are important elements. Containing 'Global Aspects' sections that cover cross-border decision-making, this book also emphasizes the application of capital budgeting techniques to a variety of issues, including the hugely significant 'buy versus lease' decision that cost corporations billions each year. It gives in-depth coverage to: real options - the value of a project must take into consideration the flexibility that it provides management, acknowledging the option of making decisions in the future when more information is available decomposing cash flows - a project consists of many series of cash flows and each series deserves its own specific risk-adjusted discount rate. Decomposing the cash flows of an investment highlights the fact that while managers are generally aware that divisions and projects have different risks, too often they neglect the fact that the cash flow components may also have different risks, with severe consequences on the quality of the decision-making. Designed to assist those making business decisions at all levels, this volume is essential reading for all those working in or studying capital budgeting. The main focus of this study is the analysis of the capital budgeting practices and techniques implemented by companies listed on the Alternative Exchange (Alt X) of the Johannesburg Securities Exchange (JSE). Dayananda, Iron, Harrison, Herbohn and Rowland (2002) explain that capital budgeting is the process through which companies assess various sizeable investments, both tangible and intangible, to determine the most viable investment projects for the company. Dayananda et al. (2002) further explain that viable investment projects are ventures that correspond with the company's objective of maximising shareholder wealth. Therefore, the capital budgeting process used by a company is very influential to its long-term sustainability. Ryan and Ryan (2002) add that an effective capital budgeting process employs appropriate measures and accurate techniques that ensure the company invests only in the most lucrative proposed projects. This

study commences by presenting a general introduction into the research conducted, offering background insight that explains the need for a study of this nature. The research problem that was identified is discussed, followed by the purpose statement of the study and a definition of all the research objectives that guide the study. Furthermore, the academic value and intended contribution of the study as well as its practical benefits are disclosed. The introductory chapter also consists of the delimitations of the study and the key concepts covered in this study. In order to provide a complete analysis of the capital budgeting practices employed by the companies listed on the Alt X, a comprehensive literature review was conducted. This highlighted the importance of capital budgeting as well as the capital budgeting behaviour of large firms in South Africa and internationally. What emerged from this research was that the capital budgeting practices and techniques implemented by large companies generally tend to align with the recommendations of financial theory which advocates the use of discounted cash flow techniques and a discount rate that accounts for all sources of funds available to the company. The literature review also assesses studies conducted on the capital budgeting practices of small and medium sized enterprises (SMEs), the category under which Alt X listed companies fall. Findings from those studies reveal that SMEs traditionally employ inferior capital budgeting techniques in comparison to their - iii - larger counterparts and use no formal procedures to calculate an acceptable rate of return required from proposed investment projects. The theoretical background gained from the literature review is complimented by an empirical analysis which investigates the actual capital budgeting behaviour of the SMEs listed on the Alt X. Companies included in the study were from all seven sectors represented on the Alt X and selection was limited only to those with an active primary listing on this board. A web-based survey comprising of 28 questions was formulated using Survey Monkey Software to collect and analyse responses. The survey was divided into sections which included questions about respondent demographics, company profiles, capital budgeting practices implemented, capital rationing and the use of discount rates. The survey remained active for a period of eight weeks to allow sufficient time for all respondents invited to participate. A total of 15 responses were obtained from this process when the survey was closed to

Further responses. The research design, methodology and techniques that guided this study are also disclosed in this dissertation. The final part of this dissertation contains research findings obtained from analysing the primary data gathered through the survey. These findings are analysed and interpreted in isolation, by relating them to findings from comparable studies of the same population as well as to similar studies conducted both locally and internationally. Finally, this dissertation concludes by summarising all research findings derived from the literature review and the empirical study. It also presents recommendations and areas for further study that could be of academic and practical value to the field of finance. Capital Budgeting and Investment Analysis marries theory with practice by providing numerous illustrations of real-world applications. It includes a discussion of capital budgeting's link to the corporation's strategy for creating value as well as addressing the international aspects of capital budgeting. The basic philosophy of this book is to help students develop their critical thinking skills required to assess potential investments. Topics covered include the basics of capital budgeting, the estimation of project cash flows and the project cost of capital, risk analysis in capital budgeting, and corporate strategy and its relationship to the capital-budgeting decision. The business environment, particularly after the continuing oil crises of the seventies, can be characterized as evolving rapidly in complex and often unpredictable ways. Such things as high interest and inflation rates, fluctuating exchange rates, volatile commodity markets, and increasing political turmoil have led to a situation in which explicit consideration of environmental dynamics is becoming much more important for successful business planning than was true in the past. Companies are finding that it is no longer possible to conduct "business as usual" under these changing circumstances. Rather, decision makers are having to be more cognizant of the many sources of uncertainty that could have serious impacts on the continued prosperity of the firm, as well as of actions that can be taken so that the company can thrive in spite of these greater uncertainties. Businesses have responded to these challenges by giving more thorough consideration to strategic issues. Whereas in the past the steady progression of markets and technology was taken for granted, the uncertainties associated with increased worldwide competition, as well as with other exogenous factors, have

forced companies to think more about flexibility. This involves not only how best to exploit profitable current options, but also how to position themselves at present to be able to respond appropriately to threats and opportunities as they arise in the future. Unfortunately, in this redirection of outlook, the finance profession has not kept pace.
