Designing Service Processes to Unlock Value, Third Edition Apr 27 2023 Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. The service process design landscape is changing, with many of the previous limitations disappearing on how and by whom services are delivered. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process, not only through self-service but also by providing information to the service provider to create a more personalized service experience. Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. Readers will learn about frameworks for value co-creation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. And with the growing number of alternatives for designing service processes and determining who performs the various service tasks, service performance outcomes are increasingly

dependent on the knowledge, skills, and abilities—that is, capabilities—of both service providers and customers. Thus, the book concludes with approaches to unlock these capabilities – and further boost value co-creation.

Peer-to-Peer, Grid, and Service-Oriented in Digital Library Architectures Jul 31 2023 This book constitutes the thoroughly refereed post-proceedings of the 6th Thematic Workshop of the EU Network of Excellence DELOS on Digital Library Architectures, held in Cagliari, Italy, in June 2004. The 15 revised full papers presented were carefully reviewed. The subjects covered include: service grids for scientific applications, distributed digital libraries, grid computing, peer-to-peer networks, service oriented architectures for digital libraries, a distributed digital library for support of community radios, multimedia management and search, query trading and processing, metadata management, retrieval functionality, and personalization services.

Designing Service Processes to Unlock Value Aug 08 2021 The service process design landscape is changing, with a much broader range of design options now available. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously

performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process not only through self-service but also by providing information to the service provider to create a more personalized service experience. This book explores how service processes can be designed to leverage opportunities for service providers and customers to cocreate value. Inside, you will learn about frameworks for value cocreation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. And with the growing involvement of customers in performing service tasks, service process outcomes are increasingly dependent on the capabilities of both service providers and customers. You will learn about real approaches to unlocking these capabilities to further boost value cocreation.

User Research Dec 12 2021 Despite businesses often being based on creating desirable experiences, products and services for consumers, many fail to consider the end user in their planning and development processes. This book is here to change that. User experience research, also known as UX research, focuses on understanding user behaviours, needs and motivations through a range of observational techniques, task analysis and other methodologies. User Research is a practical guide that shows readers how to use the vast array of user research methods available. Written by one of the UK's leading UX research professionals, readers can benefit from in-depth knowledge that explores the fundamentals of user research. Covering all the key research methods including face-to-face user testing, card sorting, surveys, A/B testing and many more, the book gives expert insight into the nuances, advantages and disadvantages of each, while also providing guidance on how to interpret, analyze and share the data once it has been obtained. Now in its second edition, User

Research provides a new chapter on research operations and infrastructure as well as new material on combining user research methodologies.

Designing Delivery May 29 2023 Now that we're moving from a product economy to a digital service economy, software is becoming critical for navigating our everyday lives. The quality of your service depends on how well it helps customers accomplish goals and satisfy needs. Service quality is not about designing capabilities, but about making—and keeping—promises to customers. To help you improve customer satisfaction and create positive brand experiences, this pragmatic book introduces a transdisciplinary approach to digital service delivery. Designing a resilient service today requires a unified effort across front-office and back-office functions and technical and business perspectives. You'll learn how make IT a full partner in the ongoing conversations you have with your customers. Take a unique customer-centered approach to the entire service delivery lifecycle Apply this perspective across development, operations, QA, design, project management, and marketing Implement a specific quality assurance methodology that unifies those disciplines Use the methodology to achieve true resilience, not just stability

Digital Twin Driven Smart Manufacturing Oct 10 2021 Digital Twin Driven Smart Manufacturing examines the background, latest research, and application models for digital twin technology, and shows how it can be central to a smart manufacturing process. The interest in digital twin in manufacturing is driven by a need for excellent product reliability, and an overall trend towards intelligent, and connected manufacturing systems. This book provides an ideal entry point to this subject for readers in industry and academia, as it answers the questions: (a) What is a digital twin? (b) How to construct a digital twin? (c) How to use a digital twin to improve manufacturing efficiency? (d) What are the essential activities in the implementation of a digital twin? (e) What are the most important obstacles to overcome for the successful deployment of a digital twin? (f) What are the relations between digital twin and New Technologies? (g) How to combine digital twin with the New Technologies to achieve high efficiency and smartness in manufacturing? This book focuses on these problems as it aims to help readers make the best use of digital twin technology towards smart manufacturing. Analyzes the differences, synergies and possibilities for integration between

digital twin technology and other technologies, such as big data, service and Internet of Things Discuss new requirements for a traditional three-dimension digital twin and proposes a methodology for a five-dimension version Investigates new models for optimized manufacturing, prognostics and health management, and cyber-physical fusion based on the digital twin

Service Orientation in Holonic and Multi-Agent Manufacturing Feb 23 2023 This book gathers the peer-reviewed papers presented at the 8th edition of the International Workshop “Service Orientation in Holonic and Multi-Agent Manufacturing – SOHOMA’18” held at the University of Bergamo, Italy on June 11 – 12, 2018. The objective of the SOHOMA annual workshops is to foster innovation in smart and sustainable manufacturing and logistics systems by promoting new concepts, methods and solutions that use service orientation of agent-based control technologies with distributed intelligence. Reflecting the theme of SOHOMA’18: “Digital transformation of manufacturing with agent-based control and service orientation of Internet-scale platforms”, the research included focuses on how the digital transformation, as advocated by the “Industry 4.0”, “Industrial Internet of Things”, “Cyber-Physical Production Systems” and “Cloud Manufacturing” frameworks, improves the efficiency, agility and sustainability of manufacturing processes, products, and services, and how it relates to the interaction between the physical and informational worlds, which is implemented in the virtualization of products, processes and resources managed as services.

Digital Marketing: Cases from India Feb 11 2022 Given the above challenge, we have selected a few authentic Indian cases that can be used to discuss various concepts of digital marketing. This will address the dearth of contextual cases in the field of digital marketing. The book is a collection of short cases which address specific issues on digital marketing like social media marketing, email marketing, campaign management and analysis, digital marketing strategies, blogs and others. We have tried to present real digital marketing challenges faced by organizations, and how they manage their marketing issues. Each case was developed by considered effort of the authors and editors so that a right blend of theory and practice can be presented in front of the readers. We are hopeful that this book will prove to be useful to both students and teachers working in the area of digital marketing. This book can be used as a supplement to any Digital Marketing text of a professor's choice for both classroom teaching for management programs, and teaching at executive training and regular courses. We hope to bring out new editions of the book with additional/new cases every year or two and keep it contemporary.
