Psychophysical Responses to Sucrose in Young Likers and Non-likers Nov 18 2022 Humans are biologically predisposed to like and prefer sweet tastes and foods for the energy content and nutritional value of sugar. However, due to the abundance and accessibility of sweet foods, having a higher preference for sweet tastes, and particularly for foods that are high in both sugar and fat, can have negative health implications including increased risk for obesity. Although sweet tastes are generally considered pleasant, the development of preferences and intake of sweet foods varies across individuals and the relationship between liking, preference, and intake is rather complex. Sucrose is a sweet tastant that is commonly used in psychophysical studies of taste and hedonic evaluation. Although sucrose is often considered a pleasant stimulus, there is some evidence to suggest the existence of an inverted U-shaped relationship between pleasantness ratings and concentration in a significant proportion of the population, such that the hedonic value of sucrose increases as the intensity or concentration of sucrose increases up to a certain point, then decreases as the intensity increases further. However, this U-shaped relationship is not universal, and some individuals demonstrate a consistent increase in hedonic response with increasing intensity. Moreover, although the findings are mixed, some research suggests that the degree to which individuals demonstrate liking for sweet tastes such as sucrose is explained in part by their sensitivity to the bitterness of the chemicals 6-n-propylthiouracil (PROP) and phenylthiocarbamide (PTC). The present study aimed to investigate differences in psychophysical responses to sweet (and fat) tastes between young likers and non-likers of sucrose by examining the effects of sucrose concentration, sucrose liker status, PROP/PTC taster status, and gender on reported pleasantness ratings and perceived sweetness intensity ratings for sucrose solutions in various backgrounds. Participants included 40 younger adults; 20 were classified as sucrose likers, and 20 were classified as sucrose non-likers using previously established methods of classification. Within each group, 10 participants were male and 10 were female. Participants were administered taste solutions consisting of varying concentrations of sucrose in different backgrounds and instructed to provide pleasantness and intensity ratings of each using the generalized Labeled Magnitude Scale (gLMS). Analyses of covariance (ANCOVA) with repeated measures were conducted to investigate the effects of sucrose concentration, sucrose liker status, PROP/PTC taster status, and gender on reported pleasantness ratings and perceived sweetness intensity ratings for sucrose solutions in various backgrounds. In general, results suggested that in young adults, hedonic response to sucrose in distilled water and fat backgrounds varied as a function of sucrose concentration, sucrose liker status, and gender. Assessing sweet-fat taste perception in young likers versus non-likers of sucrose is important because it addresses a variety of factors that might influence the onset and development of particular dietary behaviors associated with weight gain and increased risk for obesity.

Sucrose and Water Consumption by Rats Exposed to Gamma-neutron Radiation Jun 20 2020 This study examined the possible use of sucrose and water as reinforcers in behavioral studies of rats, after low dose gamma-neutron irradiation. Twenty-four rats were offered a choice of a 10 percent sucrose solution of distilled water ad libitum. Another 24 rats received only distilled water. Of the 24 rats in each of the above groups, three subgroups of six rats each received 120, 260 or 520 rads of mixed gamma-neutron radiation. The fourth subgroup of six rats was sham irradiated. Two days after irradiation, the subgroups that had been offered sucrose and water developed a significant aversion to the sucrose solution, and simultaneously increased their consumption of water. The subgroups receiving only distilled water decreased their consumption by the second day postirradiation. The most significant decrease in water consumption was observed in the rats receiving water only and 520 rads of radiation. The results suggest that the changes in consumption of sucrose and water caused by irradiation eliminate their use as reinforcers in behavioral experiments with radiation. (Author).

Yearbook of Pediatric Endocrinology 2012 Sep 04 2021 The body of knowledge in most medical specialties is rapidly expanding, making it virtually impossible to follow all advances in clinical and basic sciences that are relevant to a given field. This is particularly true in pediatric endocrinology, at the cross-road of pediatrics, endocrinology, development and genetics. Providing abstracts of articles that report the year's breakthrough developments in the basic sciences and evidence-based new knowledge in clinical research and clinical practice that are relevant to the field, the Yearbook of Pediatric Endocrinology 2011 keeps busy clinicians and scientists, pediatric endocrinologists, and also pediatricians and endocrinologists informed on new advances. Twelve Associate Editors and their co-authors selected from several thousand papers those that brought the most meaningful new information, summarized them and provided comments to put them into perspective. The papers are classified into those that identify new genes involved in diseases, new hormones, concepts revised or re-centered, important observations for clinical practice, large-scale clinical trials, new mechanisms, new paradigms, important review articles, new fears and new hopes. Because the Yearbook is endorsed by the European Society for Paediatric Endocrinology (ESPE), its publication is linked to the annual meeting of the ESPE. The Yearbook of Pediatric

Endocrinology 2011 covers the medical and scientific literature from June 2011 through May 2012.

Effect of Sucrose as a Cryoprotective Agent in the Cryopreservation of Some Dipterocarp Species Apr 11 2022 Recent studies in cryopreservation have shown that sucrose solutions at varying concentrations appear to offer protection from damage to tissues during the process of cryopreservation. In the study reported below, excised embryos of three species of dipterocarps, namely, *Hopea odorata*, *Shorea leprosula*, and *Shorea macrophylla* were subjected to a 0.50M and 0.75M sucrose solution prior to cryopreservation. Preliminary results showed that sucrose alone was not sufficient as a protective agent for the three species tested. [Authors' abstract].

Primary Processes in Photobiology Oct 05 2021 Living things use solar energy in two ways: in the transmission of information and in the conversion of light energy to chemical energy.

In order to elucidate the molecular mechanisms of highly sensitive visual responses and other photosensitive responses of biological systems, and the very efficient transduction of photoenergy to chemical energy in photosynthesis, it is important to observe molecular processes in biological systems. Using highly developed laser spectroscopic techniques, great progress has recently been achieved in the area of various primary processes in photobiology. It was therefore an excellent time to hold the 12th Taniguchi International Symposium, Biophysics Division, on Primary Processes in Photobiology. This volume is the proceedings of that symposium. Among the topics discussed are the femtosecond molecular processes in photosynthetic bacteriochlorophyll and the recently discovered intermediates in the photocycles of rhodopsin (found in the visual pigments of many animals), bacteriorhodopsin (found in the proton-pumping pigments of halobacteria) and retinochrome. New techniques for the measurement of the primary processes are also reported.

Beet-Sugar Handbook Jun 01 2021 The first all-in-one reference for the beet-sugar industry Beet-Sugar Handbook is a practical and concise reference for technologists, chemists, farmers, and research personnel involved with the beet-sugar industry. It covers: * Basics of beet-sugar technology * Sugarbeet farming * Sugarbeet processing * Laboratory methods of analysis The book also includes technologies that improve the operation and profitability of the beet-sugar factories, such as: * Juice-softening process * Molasses-softening process * Molasses-desugaring process * Refining cane-raw sugar in a beet-sugar factory The book ends with a review of the following: * Environmental concerns of a beet-sugar factory * Basics of science related to sugar technology * Related tables for use in calculations Written in a conversational, engaging style, the book is userfriendly and practical in its presentation of relevant scientific and mathematical concepts for readers without a significant background in these areas. For ease of use, the book highlights important notes, defines technical terms, and presents units in both metric and British systems. Operating problem-solving related to all stations of sugarbeet processing, frequent practical examples, and given material/energy balances are other special features of this book.

Ultrasound: Advances in Food Processing and Preservation Oct 17 2022 Ultrasound is an emerging technology that has been widely explored in food science and technology since the late 1990s. The book is divided into three main areas. Chapters 1 to 5 focus on the basic principles of ultrasound and how the technology works on microbial cells, enzymes, and the chemistry behind the process. Chapters 6 to 15 cover the application of ultrasound in specific food products and processes, discussing changes on food quality and presenting some innovations in food ingredients and enhancement of unit operations. Finally, Chapters 16 to 20 present some topics about manufacture of ultrasound equipment and simulation of the process, the use of the technology to treat food industry wastewater, and an industry perspective. The laws and regulations concerning emerging technologies, such as ultrasound, are also discussed, including the new Food Safety Modernization Act. Provides a clear and comprehensive panorama of ultrasound technology Contains updated research behind this technology Brings the current tested product and future uses Explores potential future use within the food industry

Examining Sucrose Subjective Response Among Individuals With Opioid Use Disorder May 24 2023 Aims: Opioid use disorder (OUD) is associated with significant morbidity and mortality, and opioid agonist treatment (OAT) with methadone or buprenorphine represents the most efficacious treatment. However, data suggest that chronic administration of opioids may be associated with significant weight gain, possibly by altering an organism's perception of and preference for sweet foods. The primary aim of this laboratory study was to rigorously examine sucrose subjective response among adults receiving OAT and a comparison sample without OUD. As secondary outcomes, we also sought to compare the groups on additional baseline characteristics that may influence subjective sucrose response and weight gain during treatment. Methods: Participants were 40 adults receiving treatment for OUD (OUD+) and a comparison sample of 40 adults without OUD (OUD-). All participants completed an initial screening visit that included questionnaires on eating behaviors, diet and nutrition, recent substance use, and measurement of body mass index. Eligible participants completed two, same-day outpatient laboratory sessions during which they sampled six experimenter-administered concentrations of sucrose solution (0, 0.1, 0.25, 0.5, 0.75, and 1.0M in distilled water) each three times under double-blind counterbalanced conditions. Following each exposure, participants rated the pleasantness and intensity of each sample using 100-point visual analog scales. Results: OUD+ participants rated sucrose solutions as less pleasant than OUD- participants (p

Freeze-Drying/Lyophilization of Pharmaceutical and Biological Products Jan 28 2021 Freeze-drying, or lyophilization, is a well established technology used in the preservation of numerous pharmaceutical and biological products. This highly effective dehydration method involves the removal of water from frozen materials via the direct sublimation of ice. In recent years, this process has met with many changes, as have the regulatio

Principles and Applications of Fluorescence Spectroscopy Nov 25 2020 Fluorescence spectroscopy is an important investigational tool in many areas of analytical science, due to its extremely high sensitivity and selectivity. With many uses across a broad range of chemical, biochemical and medical research, it has become an essential investigational technique allowing detailed, real-time observation of the structure and dynamics of intact biological systems with extremely high resolution. It is particularly heavily used in the pharmaceutical industry where it has almost completely replaced radiochemical labelling. Principles and Applications of Fluorescence Spectroscopy gives the student and new user the essential information to help them to understand and use the technique confidently in their research. By integrating the treatment of absorption and fluorescence, the student is shown how fluorescence phenomena arise and how these can be used to probe a range of analytical problems. A key element of the book is the inclusion of practical laboratory experiments that illustrate the fundamental points and applications of the technique.

Advanced Biology Sep 16 2022 The major new course text has been written by experienced authors to provide coverage of the Advanced Subsidiary (AS) and Advanced GCE Biology and Human Biology specifications in a single book. Advanced Biology provides clear, well-illustrated information, which will help develop a full understanding of biological structure and function and of relevant applications. The topics have been carefully organised into parts, which give a logical sequence to the book. This new text has been developed to replace the best-selling titles *Biology: Principles and Processes* and *Biology, A Functional Approach*. Features include: full-colour design with clear diagrams and photographs; up-to-date information on biotechnology, health, applied genetics and ecology; clearly written text using the latest Institute of Biology terminology; a useful summary and a bank of practice questions at the end of every chapter; support boxes help bridge the gap from GCSE or equivalent courses; extension boxes providing additional depth of content - some by guest authors who are experts in their field; and a comprehensive index so you can quickly locate information with ease. There is also a website providing additional support that you can access directly at www.advancedbiology.co.uk.

The Blood Sugar Solution 10-Day Detox Diet Jun 25 2023 Dr. Hyman's revolutionary weight-loss program, based on the #1 New York Times bestseller *The Blood Sugar Solution*, supercharged for immediate results! The key to losing weight and keeping it off is maintaining low insulin levels. Based on Dr. Hyman's groundbreaking Blood Sugar Solution program, *The Blood Sugar Solution 10-Day Detox Diet* presents strategies for reducing insulin levels and producing fast and sustained weight loss. Dr. Hyman explains how to: activate your natural ability to burn fat -- especially belly fat; reduce inflammation; reprogram your metabolism; shut off your fat-storing genes; de-bug your digestive system; create effortless appetite control; and soothe the stress to shed the pounds. With practical tools designed to achieve optimum wellness, including meal plans, recipes, and shopping lists, as well as step-by-step, easy-to-follow advice on green living, supplements, medication, exercise, and more, *The Blood Sugar Solution 10-Day Detox Diet* is the fastest way to lose weight, prevent disease, and feel your best.

Oxford Textbook of Pediatric Pain Dec 27 2020 Our understanding of how pain in early life differs to that in maturity is continuing to increase and develop, using a combination of approaches from basic science, clinical science, and implementation science. The new edition of the *Oxford Textbook of Pediatric Pain* brings together an international team of experts to provide an authoritative and comprehensive textbook on all aspects of pain in infants, children, and youth. Divided into nine sections, the textbook analyses pain as a multifactorial problem to give the reader a comprehensive understanding of this challenging subject. Evidence-based chapters look in depth at topics ranging from the long-term effects of pain in children, to complementary therapy in paediatric pain. The text addresses the knowledge-to-practice gap through individual and organizational implementation, and facilitation strategies. Case examples and perspective boxes are provided to aid learning and illustrate the application of knowledge. Written by clinicians, educators, trainees, and researchers, hand selected by the Editors for their practical approach and expertise in specific subject areas, the new edition of the *Oxford Textbook of Pediatric Pain* is an essential reference text in the assessment and treatment of patients and families in the field of paediatric pain. Purchasers of the print version of the second edition will have free access on Oxford Medicine Online to all the content for the life of the edition.

Coping with Negative Life Events Aug 03 2021 "Like a Bridge over Troubled Waters" The surge of current interest in the interface between clinical and social psychology is well

illustrated by the publication of a number of general texts and journals in this area, and the growing emphasis in graduate programs on providing training in both disciplines. Although the benefits of an integrated clinical-social approach have been recognized for a number of years, the recent work in this area has advanced from the theoretical extrapolations of social psychological models to clinical issues to theory and research that is based on social principles and conducted in clinical domains. It is becoming increasingly common to find social psychologists pursuing research with clinical populations and clinical psychologists investigating variables that have traditionally been in the realm of social psychology. A major area of interface between the two disciplines is in research and theory concerned with how individuals respond to negative events. In addition to the trend toward an integrated clinical-social approach, the growing body of literature in this area reflects the explosion of current interest in the area of health psychology; work by clinical and social psychologists on the topics of stress and coping has been one of the major facets of this burgeoning field. The purpose of the present volume is to provide a common forum for recent advances in the clinical and social literature on responses to negative life outcomes.

Behavioral Models in Stress Research Mar 22 2023 Stress is an adaptive response that has developed throughout evolution, and is associated with multiple changes in the biochemistry, histology and physiology of an organism. As stress may induce or contribute to multiple neuropsychiatric disorders, the rigorous investigation of the neural substrates of stress has become a critical endeavour of contemporary biomedical science. This book explores the physiological responses that researchers have attempted to assess in stress-evoked behavioural changes, using both human and animal "experimental" models in clinical and non-clinical research. Though all aspects of the field have their challenges, animal experimental research of stress is a particularly difficult but meaningful task. This book provides succinct and relevant summaries of progress in the area of assessing stress response and the conditions contributing to it.

Advanced Drying Technologies for Foods May 20 2020 The goal of all drying research and development is to develop cost-effective innovative processes that yield high-quality dried products with less energy consumption and reduced environmental impact. With the literature on drying widely scattered, Advanced Drying Technologies for Foods compiles under one cover concise, authoritative, up-to-date assessments of modern drying technologies applied to foods. This book assembles a number of internationally recognized experts to provide critical reviews of advanced drying technologies, their merits and limitations, application areas and research opportunities for further development. Features: Provides critical reviews of advanced drying technologies Discusses the merits and limitations of a variety of food drying technologies Explains drying kinetics, energy consumption and quality of food products Reviews the principles and recent applications of superheated steam drying The first four chapters deal with recent developments in field-assisted drying technologies. These include drying techniques with the utilization of electromagnetic fields to deliver energy required for drying, for example, microwave drying, radio frequency drying, electrohydrodynamic drying, and infrared radiation drying. The remainder of this book covers a wide assortment of recently developed technologies, which include pulse drying, swell drying, impinging stream drying, and selected advances in spray drying. The final chapter includes some innovative technologies which are gaining ground and are covered in depth in a number of review articles and handbooks, and hence covered briefly in the interest completeness. This book is a valuable reference work for researchers in academia as well as industry and will encourage further research and development and innovations in food drying technologies.

Handbook of Stress and the Brain Part 2: Stress: Integrative and Clinical Aspects Dec 07 2021 The Handbook of Stress and the Brain focuses on the impact of stressful events on the functioning of the central nervous system; how stress affects molecular and cellular processes in the brain, and in turn, how these brain processes determine our perception of and reactivity to, stressful challenges - acutely and in the long-run. Written for a broad scientific audience, the Handbook comprehensively reviews key principles and facts to provide a clear overview of the interdisciplinary field of stress. The work aims to bring together the disciplines of neurobiology, physiology, immunology, psychology and psychiatry, to provide a reference source for both the non-clinical and clinical expert, as well as serving as an introductory text for novices in this field of scientific inquiry. Part 2 treats the complexity of short-term and long-term regulation of stress responsivity, the role of stress in psychiatric disorders as based on both preclinical and clinical evidence, and the current status with regard to new therapeutic strategies targeting stress-related disorders.

Dietary Sugars and Health Nov 06 2021 Sugar consumption is suspected to play an important role in the pathogenesis of diabetes, cardiovascular disorders, fatty liver disease, and some forms of cancers. Dietary sugars—fructose in particular—also have a potential role in obesity and metabolic diseases. *Dietary Sugars and Health* presents all aspects of dietary sugars as they relate to health and disease. It provides a review of the current science related to dietary sugars, ranging from historical and cultural perspectives to food science and production to basic research, animal trials, human pathophysiology, epidemiology, and public health policy implications. Each chapter features a concise, thorough summary of the current knowledge, including an overview of cutting-edge research, controversies, and future perspectives. The book provides a balanced approach through global and multidisciplinary contributions as well as input from various sectors, from academia to the food and beverage industry. The overall collection provides readers with a balanced and complete view of the science related to dietary sugars and health. This book is an invaluable reference for food scientists, nutrition scientists, clinical and translational researchers, obesity researchers, physiologists, public health scientists, and policy makers.

The Blood Sugar Solution Feb 21 2023 Find balance in your life and in your blood sugar with the easy to follow guide on leading a healthier life and being a happier person - perfect for anyone looking to take control of their body! In *The Blood Sugar Solution*, Dr. Mark Hyman reveals that the secret solution to losing weight and preventing not just diabetes but also heart disease, stroke, dementia, and cancer is balanced insulin levels. Dr. Hyman describes the seven keys to achieving wellness -- nutrition, hormones, inflammation, digestion, detoxification, energy metabolism, and a calm mind -- and explains his revolutionary six-week healthy-living program. With advice on diet, green living, supplements and medication, exercise, and personalizing the plan for optimal results, the book also teaches readers how to maintain lifelong health. Groundbreaking and timely, *The Blood Sugar Solution* is the fastest way to lose weight, prevent disease, and feel better than ever.
