home, no matter the size or shape. Get the Residential & Light Commercial Controls Catalog to learn how to control products compatible with M-Series & P-Series equipment.

**The Home Owner's Guide to HVAC** Jan 14 2023

How green is green? The average homeowner is usually well-informed about which products and concepts are considered "green," but they seem to have less of an understanding of how they compare, and which things work the best for the lowest investment. Did you know that 40 percent of the average home power bill is dedicated to air conditioning in warm climates? Further, energy is spent on cooking, hot water, clothes dryers, and such. Did you know that solar hydronic panels are way more efficient than solar voltaic panels? How about instantaneous water heaters? Are they good? Homeowners need to make dozens of decisions about which products or services they need in order to make their home the most efficient it can be for the given budget. Do you have mold

[lotus.calit2.uci.edu](http://lotus.calit2.uci.edu)

or humidity problems? If you want to learn about things like the home envelope, HVAC, hot water, and electrical systems, this book is for you. It is written in plain English, and covers all the bases. Also, given are tips on saving the environment from an engineer's perspective. The author is a big fan of the environment, but does not like "greenwashing." The generic definition of greenwashing is the practice of making an unsubstantiated or misleading claim about the environmental benefits of a product, service, or technology. Pros and cons of various "green" products are discussed so that the homeowner can understand the smartest purchases and practices. One of the things you will learn is that the envelope of the home is just as important as the HVAC. You have to understand both to be successful. The envelope is thoroughly discussed as well as HVAC, plumbing, electrical, and the various green technologies.

*Value Creation for Owners and Directors* Feb 20

[lotus.calit2.uci.edu](http://lotus.calit2.uci.edu)

2021 This book deals with a much understudied and poorly understood aspect of business: the role of owners and boards in value creation. While there is abundant guidance on value creation for publicly listed firms and their managers, the role played by owners, and their corporate directors, in value creation and governance has been overlooked. This book aims to fill that gap. • The first part deals with the mission, and the values and rules pertaining to the governance of the business. These structural elements are fundamental for owners to get right as they pave the way to value creation, or its opposite. They refer to "WHAT" owners have to do. Another element is the formation of the three boards that govern owner-led firms: the owners board, the board of directors, and the management board. • The second part addresses the relational elements that owners must master to effectively manage the social and emotional dynamics in their enterprise. It deals with the "HOW" of ownership, namely the leadership

process that lies at the heart of board work. This process ensures alignment across the three boards and also with stakeholders that is vital to realizing owners' value creating aims. • Thirdly, the book explores the histories, defining experiences, and talents that define owners and shape their enterprise. It concerns the "WHOM," namely the identities of owners. It explores the diversity of ownership styles and identifies the critical personal transitions owners must make in their leadership quest. This book offers a practical guide for business aiming for value creation. It also should be of interest to directors and executives of all firms with identifiable ownership, such as entrepreneurial, family, state-owned and private equity firms.

**Reshaping Technical Communication** Oct 19

2020 This anthology brings together voices from industry and academia in a call for elevating the status, identity, value, and influence of technical communicators. Editors Barbara Mirel and Rachel Spilka assert that technical communicators must depart from their traditional roles, moving instead in a more influential and expansive direction. To help readers explore the possibilities, contributions from innovative thinkers and leaders in technical communication propose ways to redefine the field's identity and purposes and to expand the parameters of its work. The chapters included

here all point toward new directions for greater growth and influence of the field. Contributors depart from traditional ideas and solutions and discuss new and in some cases radical points, provoking further thought and discussion. Its exploration of fresh territory uncovers new research topics and directions, and provides an examination of both internal, industry-academia relationships and external relationships between technical communicators and other professionals. In its entirety, this collection represents an inclusive vision for the future, targeting such wide-ranging issues as creating effective professional organizations, disseminating research to diverse audiences, transitioning to more influential job roles, exerting leadership in usability, and creating hybrid identities and collaborative programs between industry and academic to support them. The diverse voices from industry and academia will inspire readers to think differently about the discipline's identity and direction, and to build

on the ideas they find herein to effect change within their own spheres. As required reading for academics and professionals in technical communication, this collection is a critical step in reshaping and reinvigorating the technical communication field to ensure its survival and growth in the 21st century.
