involved in Thai manufacturing since the early 1960s but despite this significant involvement, their role in the industrialization process is a controversial issue. This book aims to evaluate the impact of MNE involvement in Thai manufacturing; and to recommend policies for maximising the benefits from MNE involvement. MNEs have been involved in Thai manufacturing since the early 1960s but despite this significant involvement, their role in the industrialization process remains a controversial issue. This book has three main foci: to evaluate the impact of MNE involvement in Thai manufacturing; to gain insight into the principal mechanisms by which MNEs contribute to the industrialization process and obstacles that prevent them from functioning more effectively; and to recommend policies for maximising the benefits from MNE involvement. The key hypothesis proposed by the author is that gains from MNE involvement are conditioned by the policy environment of the host country. The scope of MNE involvement studies uniquely covers not only FDI but also non-FDI. The study also draws together valuable conclusions and outlines policy lessons for other developing countries.

High Crimes is journalist Michael Kotas's gripping account of life on top of the world--where man is every bit

as deadly as Mother Nature. In the years following the publication of Into Thin Air, much has changed on Mount Everest. Among all the books documenting the glorious adventures in mountains around the world, none details how the recent infusion of wealthy climbers is drawing crime to the highest place on the planet. The change is caused both by a tremendous boom in traffic, and a new class of parasitic and predatory adventurer. It's likely that Jon Krakauer would not recognize the camps that he visited on Mount Everest almost a decade ago. This book takes readers on a harrowing tour of the criminal underworld on the slopes of the world's most majestic mountain. High Crimes describes two major expeditions: the tragic story of Nils Antezana, a climber who died on Everest after he was abandoned by his guide; as well as the author's own story of his participation in the Connecticut Everest Expedition, guided by George Dijmarescu and his wife and climbing partner, Lhakpa Sherpa. Dijmarescu, who at first seemed well-intentioned and charming, turned increasingly hostile to his own wife, as well as to the author and the other women on the team. By the end of the expedition, the three women could not travel unaccompanied in base camp due to the threat of violence. Those that tried to stand against the violence and theft found that the worst of the intimidation had followed them home to Connecticut. Beatings, thefts, drugs, prostitution, coercion, threats, and

abandonment on the highest slopes of Everest and other mountains have become the rule rather than the exception. Kostas describes many such experiences, and explores the larger issues these stories raise with thriller-like intensity. This book provides a unique historical and qualitative review of ten foreign automakers with plants in developed North America from their early beginnings to their export entry into North America. It seeks to expand the knowledge of American and Canadian policymakers pursuing a new foreign motor vehicle assembly plant or Foreign Direct Investment. Efforts to use existing trade agreements to build a larger regional agreement face many challenges. This book considers this problem with reference to ASEAN's current agreements with key partners and the interest to build the Regional Comprehensive Economic Partnership (RCEP). The analysis of the options is framed by a focus on the use of supply chains in international business. Issues considered include those related to reductions in tariffs, trade facilitation, the treatment of investment and of services and the definition of rules of origin. The work is informed by case studies of supply chains in automobile and electronics, and in a professional service sector. The book provides a set of priority actions for better progress in taking a bottom-up approach to building RCEP. Celebrating the invention of vehicles, this collective biography tells the inspiring stories of the visionaries who changed the way we

This book looks at the industrial policies of Southeast Asian economies in their motor vehicle industries from early import substitution to policy-making under the more liberalised WTO policy regime. The book examines how inward automotive investment, especially from Japan, has been affected by policies, and how such investment has promoted industrial development in the late-industrialising economies within ASEAN (Association of Southeast Asian Nations). It provides insights into the automotive industry of Southeast Asia in terms of production volumes, sales volumes, market structure, and trade. Through country case studies, the book is a useful reference and illustrates how industrial policies in Southeast Asia have affected the spread of automotive development in the region. It will appeal to policy-makers

and researchers interested in the automobile industry, industrial policies in the industry and the spread of development from foreign investors to local firms.
